HONORARY EDITORS

Prof. E.L. Daglass (*University of Bristol*)
Dr. D. Nicole (*University of Southampton*)

Pages in issues of *IEE Proc., Comput. Digit. Tech.* 1997

Pages	Issue No.	Date
1–48	1	January
49–148	2	March
149–208	3	May
209–248	4	July
249–352	5	September
353–396	6	November

This publication is copyright under the Berne Convention and the Universal Copyright Convention. All rights reserved. Apart from any copying under the UK Copyright, Designs and Patents Act 1988, Part 1, Section 38, whereby a single copy of this article may be supplied, under certain conditions, for the purposes of research or private study, by a library of a class prescribed by The Copyright (Librarians and Archivists) (Copying of Copyright Material) Regulations 1989: SI 1989/1212, no part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means without the prior permission of the copyright owners. Permission is, however, not required to copy abstracts of individual contributions on condition that a full reference to the source is shown.

An IEE licensing arrangement exists whereby organisations entering into an agreement are legally entitled to make up to twenty copies of an IEE paper or article.

Authorisation to photocopy items for internal or personal use, or for the internal or personal use of specific clients, is granted by the Institution of Electrical Engineers for libraries and other users registered with the Copyright Clearance Center Transactional Reporting Service, provided that the base fee of $10.00 per copy is paid directly to the Copyright Clearance Center, Inc., 21 Congress Street, Salem, MA 01970, USA (1350–2387/97 $10.00). This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale.

Photocopies of individual papers published in the *IEE Proceedings* can be supplied from the IEE Library at 10p per page plus a handling charge of 50p per paper, which covers the cost of surface mail (airmail extra). The handling charge is waived if reprints are collected from Savoy Place by purchasers.

The IEE is not as a body responsible for the opinions expressed by individual authors.
The IEE is a member of the Association of Learned & Professional Society Publishers.

ANALOGUE ELECTRONICS

Logic models for continuous time p353

AUTOMATA THEORY

Inversion of cellular automata iterations p279
Logic models for continuous time p353

CIRCUIT THEORY AND DESIGN

DOORS: an object-oriented CAD system for high level synthesis p331
GRASS: an efficient gate re-assignment algorithm for inverter minimisation in post technology mapping p348
Hardware/software partitioning of embedded systems with multiple hardware processes p285
Improved control signal distribution for very wide VLSI data buses p209
Logic models for continuous time p353
Logic synthesis of a PLL phase frequency detector p381
Multilevel logic synthesis technique for efficient verification testing p83
Optimum partitioning problem for rectilinear VLSI layout p155
Planar constrained terminals over-the-cell router p121
Predicting the complexity of large combinational circuits through symbolic spectral analysis of their functional specifications p343

CMOS INTEGRATED CIRCUITS

Logic synthesis of a PLL phase frequency detector p381

CODES AND DECODING

Bit-serial multiplication in GF(2^m) using irreducible all-one polynomials p391
Conference key distribution system with user anonymity based on algebraic approach p145
Critique of the paper 'Novel design of arithmetic coding for data compression' p394
Digital signature with a subliminal channel p387
Dual basis systolic multipliers for GF(2^m) p43
Enhancing the security of El Gamal's signature scheme p47
Generic systolic array for genetic algorithms p107
Global linear complexity analysis of filter keystream generators p33
Logic for verifying public-key cryptographic protocols p28
V-fairness (t, n) secret sharing scheme p245

COMMUNICATION SYSTEM THEORY

Asymptotic properties of queuing networks p249
Enhancing the security of El Gamal's signature scheme p47
Integrated concurrency control protocol for hard real-time database systems p214
Logic for verifying public-key cryptographic protocols p28
Pollaczek-Khinchin formula for the M/G/1 queue in discrete time with vacations p222
Systematic design of key establishment protocols based on one-way functions p93

COMPUTATIONAL COMPLEXITY

Analysis of delays in converting from a redundant representation p219
Comparison of dynamic and static load-balancing strategies in heterogeneous distributed systems p100
Global linear complexity analysis of filter keystream generators p33
Optimum partitioning problem for rectilinear VLSI layout p155
Planar constrained terminals over-the-cell router p121
Predictable distributed dynamic scheduling in RTDOS p195
Predicting the complexity of large combinational circuits through symbolic spectral analysis of their functional specifications p343

COMPUTER APPLICATIONS

DOORS: an object-oriented CAD system for high level synthesis p331
Dynamic parity logging disk arrays for engineering database systems p255
GRASS: an efficient gate re-assignment algorithm for inverter minimisation in post technology mapping p348
Hardware/software partitioning of embedded systems with multiple hardware processes p285
HDL-specific source level behavioural optimisation p138
Improved control signal distribution for very wide VLSI data buses p209
Multilevel logic synthesis technique for efficient verification testing p83
Optimum partitioning problem for rectilinear VLSI layout p155
Planar constrained terminals over-the-cell router p121
Predicting the complexity of large combinational circuits through symbolic spectral analysis of their functional specifications p343
Priority assignment in distributed real-time databases using optimistic concurrency control p324
Source level optimisation of VHDL for behavioural synthesis p1
VHDL generation from hierarchical Petri net specifications of parallel controllers p127

COMPUTER COMMUNICATIONS

Asymptotic properties of queuing networks p249
Comparison of dynamic and static load-balancing strategies in heterogeneous distributed systems p100
Integrated concurrency control protocol for hard real-time database systems p214
Performance analysis of FDDI LANs using numerical methods p149
Security management architecture for access control to network resources p362

CONTROL SYSTEMS ANALYSIS

Low test-application time method for EEPLA testing p39

CYBERNETICS AND ROBOTICS

Logic for verifying public-key cryptographic protocols p28

DATA COMMUNICATION

Asymptotic properties of queuing networks p249
Comparison of dynamic and static load-balancing strategies in heterogeneous distributed systems p100
Distributed algorithms for mobile hosts p49
Enhancing the security of El Gamal's signature scheme p47
Integrated concurrency control protocol for hard real-time database systems p214
Logic for verifying public-key cryptographic protocols p28
Performance analysis of FDDI LANs using numerical methods p149
Predictable distributed dynamic scheduling in RTDOS p195
Security management architecture for access control to network resources p362
Stochastic model of a cache-coherency overhead in SCI rings p175
Systematic design of key establishment protocols based on one-way functions p93

DATA HANDLING

Critique of the paper 'Novel design of arithmetic coding for data compression' p394

DATA SECURITY

Bit-serial multiplication in GF(2^m) using irreducible all-one polynomials p391
Conference key distribution system with user anonymity based on algebraic approach p145
Digital signature with a subliminal channel p387
Efficient cheater identification method for threshold schemes p23
Enhancing the security of El Gamal's signature scheme p47
Global linear complexity analysis of filter keystream generators p33
Integrated concurrency control protocol for hard real-time database systems p214
Logic for verifying public-key cryptographic protocols p28
New algorithms for asynchronous communication p227
Security management architecture for access control to network resources p362
Systematic design of key establishment protocols based on one-way functions p93
V-fairness (t, n) secret sharing scheme p245

DIGITAL ARITHMETIC

Analysis of delays in converting from a redundant representation p219
Bit-serial multiplication in GF(2^m) using irreducible all-one polynomials p391
Global linear complexity analysis of filter keystream generators p33

DIGITAL ELECTRONICS

Alternative systolic array for non-square-root Cholesky decomposition p57
Design and modelling of a high performance differential bipolar self-timed microprocessor p371
Logic synthesis of a PLL phase frequency detector p381

DIGITAL TECHNIQUES

Design and modelling of a high performance differential bipolar self-timed microprocessor p371

EXPERT SYSTEMS

Connectionist network for dynamic programming problems p163
Logic for verifying public-key cryptographic protocols p28

FORMAL LOGIC

Matrix method for solving multivalued logic differential equations p267
Multilevel logic synthesis technique for efficient verification testing p83
Multireader and multiwriter asynchronous communication mechanisms p241
Role model analysis of an asynchronous communication mechanism p232

INFORMATION THEORY

Critique of the paper 'Novel design of arithmetic coding for data compression' p394
Digital signature with a subliminal channel p387

INTEGRATED CIRCUITS

Design and modelling of a high performance differential bipolar self-timed microprocessor p371
Dual basis systolic multipliers for GF(2^m) p43
Improved control signal distribution for very wide VLSI data buses p209
Optimal fault-tolerant design approach for VLSI array processors p15
Optimum partitioning problem for rectilinear VLSI layout p155

LOGIC AND SWITCHING CIRCUITS

Dual basis systolic multipliers for GF(2^m) p43
Generic systolic array for genetic algorithms p107
GRASS: an efficient gate re-assignment algorithm for inverter minimisation in post technology mapping p348
Logic models for continuous time p353
Logic synthesis of a PLL phase frequency detector p381
Low test-application time method for EEPLA testing p39
Multilevel logic synthesis technique for efficient verification testing p83
Optimal fault-tolerant design approach for VLSI array processors p15
Planar constrained terminals over-the-cell router p121
Predicting the complexity of large combinational circuits through symbolic spectral analysis of their functional specifications p343

LOGIC DESIGN

DOORS: an object-oriented CAD system for high level synthesis p331
Dual basis systolic multipliers for GF(2^m) p43
Efficient scheduling of behavioural descriptions in high-level synthesis p75
Generic systolic array for genetic algorithms p107
GRASS: an efficient gate re-assignment algorithm for inverter minimisation in post technology mapping p348
Hardware/software partitioning of embedded systems with multiple hardware processes p285
Logic models for continuous time p353
Logic synthesis of a PLL phase frequency detector p381
Low test-application time method for EEPLA testing p39
Matrix method for solving multivalued logic differential equations p267
Multilevel logic synthesis technique for efficient verification testing p83
Optimal fault-tolerant design approach for VLSI array processors p15
Overview of decision diagrams p187
Predicting the complexity of large combinational circuits through symbolic spectral analysis of their functional specifications p343
Variable ordering for ordered binary decision diagrams by a divide-and-conquer approach p261
VHDL generation from hierarchical Petri net specifications of parallel controllers p127

MATHEMATICAL TECHNIQUES

Asymptotic properties of queuing networks p249
Bit-serial multiplication in GF(2^m) using irreducible all-one polynomials p391
Connectionist network for dynamic programming problems p163
Generic systolic array for genetic algorithms p107
GRASS: an efficient gate re-assignment algorithm for inverter minimisation in post technology mapping. p348
Matrix method for solving multivalued logic differential equations p267
Planar constrained terminals over-the-cell router p121
Pollaczek-Khinchin formula for the M/G/1 queue in discrete time with vacations p222
VHDL generation from hierarchical Petri net specifications of parallel controllers p127

MODULATORS AND DEMODULATORS

Logic synthesis of a PLL phase frequency detector p381

MULTIMEDIA

Performance analysis of FDDI LANs using numerical methods p149

MULTIPROCESSOR SYSTEMS

Design and application of Parsim–a message-passing computer simulator p7
Predictable distributed dynamic scheduling in RTDOS p195
Stochastic model of a cache-coherency overhead in SCI rings p175
Task tree scheduling onto linear arrays using tabu search p317

NEURAL NETS

Connectionist network for dynamic programming problems p163
Security management architecture for access control to network resources p362

NUMERICAL ANALYSIS

Predicting the complexity of large combinational circuits through symbolic spectral analysis of their functional specifications p343

OPTICAL LINKS AND EQUIPMENT

Performance analysis of FDDI LANs using numerical methods p149

OPTIMAL CONTROL

Connectionist network for dynamic programming problems p163

PARALLEL PROCESSING

Alternative systolic array for non-square-root Cholesky decomposition p57
Comparison of dynamic and static load-balancing strategies in heterogeneous distributed systems p100
Design and application of Parsim–a message-passing computer simulator p7
Design of a clock synchronisation sub-system for parallel embedded systems p65
Distributed algorithms for mobile hosts p49
Effective and concurrent checkpointing and recovery in distributed systems p304
Efficient scheduling of behavioural descriptions in high-level synthesis p75
Feasibility test for real-time communication using wormhole routing p273
Hamiltonicity, vertex symmetry, and broadcasting of uni-directional hypercubes p169
HDL-specific source level behavioural optimisation p138
Increasing cache bandwidth using multiport caches for exploiting ILP in non-numerical code p295
Optimal fault-tolerant design approach for VLSI array processors p15
Predictable distributed dynamic scheduling in RTDOS p195
Stochastic model of a cache-coherency overhead in SCI rings p175
Task tree scheduling onto linear arrays using tabu search p317

PERFORMANCE EVALUATION

Comparison of dynamic and static load-balancing strategies in heterogeneous distributed systems p100
Design and application of Parsim–a message-passing computer simulator p7
Design and modelling of a high performance differential bipolar self-timed microprocessor p371
Dynamic parity logging disk arrays for engineering database systems p255
Increasing cache bandwidth using multiport caches for exploiting ILP in non-numerical code p295
Optimal fault-tolerant design approach for VLSI array processors p15
Performance analysis of FDDI LANs using numerical methods p149
Stochastic model of a cache-coherency overhead in SCI rings p175

PROBABILITY AND STATISTICS

Pollaczek-Khinchin formula for the M/G/1 queue in discrete time with vacations p222

PROGRAMMING THEORY

Analysis of delays in converting from a redundant representation p219
Comparison of dynamic and static load-balancing strategies in heterogeneous distributed systems p100
Global linear complexity analysis of filter keystream generators p33
Inversion of cellular automata iterations p279
Optimum partitioning problem for rectilinear VLSI layout p155
Planar constrained terminals over-the-cell router p121
Predictable distributed dynamic scheduling in RTDOS p195
Predicting the complexity of large combinational circuits through symbolic spectral analysis of their functional specifications p343

SIGNAL DETECTION

Logic synthesis of a PLL phase frequency detector p381

SIGNAL PROCESSING

Critique of the paper 'Novel design of arithmetic coding for data compression' p394
Generic systolic array for genetic algorithms p107

SWITCHING SYSTEMS

Role model analysis of an asynchronous communication mechanism p232

SWITCHING THEORY

Asymptotic properties of queuing networks p249
Design and application of Parsim–a message-passing computer simulator p7
Hamiltonicity, vertex symmetry, and broadcasting of uni-directional hypercubes p169
New algorithms for asynchronous communication p227
Role model analysis of an asynchronous communication mechanism p232

TELECOMMUNICATION

Security management architecture for access control to network resources p362

Publishing Department: Michael Faraday House, Six Hills Way, Stevenage, Herts. SG1 2AY, United Kingdom

IEE Proceedings

The Institution of Electrical Engineers, Savoy Place, London WC2R 0BL, United Kingdom
Publishing Department: Michael Faraday House, Six Hills Way, Stevenage, Herts. SG1 2AY, United Kingdom

Volume 144 1997

The *IEE Proceedings* is published in twelve titles, as follows:

IEE Proceedings — Science, Measurement and Technology

IEE Proceedings — Electric Power Applications

IEE Proceedings — Generation, Transmission and Distribution

IEE Proceedings — Control Theory and Applications

IEE Proceedings — Computers and Digital Techniques

IEE Proceedings — Radar, Sonar and Navigation

IEE Proceedings — Circuits, Devices and Systems

IEE Proceedings — Microwaves, Antennas and Propagation

IEE Proceedings — Communications

IEE Proceedings — Optoelectronics

IEE Proceedings — Vision, Image and Signal Processing

IEE Proceedings — Software Engineering

Six issues of each title are published during the year.

ADAPTIVE CONTROL

Adaptive control scheme using real time tuning of the parameter estimator **CTA** p241
Adaptive integral control of time-delay systems **CTA** p531
Adaptive performance/robust control design for discrete systems **CTA** p95
Autotuning temperature control using identification by multifrequency binary sequences **CTA** p233
Co-ordinated control of multiple robotic manipulators handling a common object–theory and experiments **CTA** p73
Expert adaptive control applied to turbogenerator systems **CTA** p2
Fourier series neural network-based adaptive variable structure control for servo systems with friction **CTA** p559
Generalised predictive control (GPC): a powerful control tool in medicine **CTA** p8
Implementation of a self-tuning AVR **CTA** p32
Model reference adaptive control of dynamic output feedback linearisable systems with unknown high frequency gain **CTA** p427
On-line adaptive control in the hot rolling of steel **CTA** p15
Robust output tracking for MIMO nonlinear systems: an adaptive fuzzy systems approach **CTA** p537
Robust self-tuning rotated fuzzy basis function controller for robot arms **CTA** p293
Self-tuning control of an industrial pilot-scale reheating furnace: Design principles and application of a bilinear approach **CTA** p25
Variable structure adaptive control of robot manipulators **CTA** p167

AEROSPACE SYSTEMS

Aircraft vertical profile prediction based on surveillance data only **RSN** p301
Analysis and simulation of a high-speed two-phase AC drive for aerospace applications **EPA** p149
Case study comparison of robust linear quadratic design and mixed-sensitivity H∞ control **CTA** p476
Comment on "Advances in aircraft-height estimation using distance-measuring equipment" [and reply] **RSN** p235
Extrinsic Fabry-Perot interferometer vibration and acoustic sensor systems for airport ground traffic monitoring **OPT** p134
Global navigation satellite system in an integrated air traffic management constellation **RSN** p156
Nonlinear autopilot control design for a 2-DOF helicopter model **CTA** p612
Prediction of the electromagnetic performance of large ground-based impedance-loaded dielectric space-frame radomes **RSN** p9
Real-time identification of missile aerodynamics using a linearised Kalman filter aided by an artificial neural network **CTA** p299
Robust output tracking for MIMO nonlinear systems: an adaptive fuzzy systems approach **CTA** p537

AMPLIFIERS

Automatic removal of Cartesian feedback transmitter imperfections **COM** p281
Circuit transformation method from OTA-C circuits into CFA-based RC circuits **CDS** p209
Class-AB SiC CMOS power opamp with stable voltage gain over wide temperature range **CDS** p22
Distortion effects of multicarrier envelope limiting **COM** p349
Electromagnetic investigation on the propagation in distributed active devices **MAP** p281
High-frequency switching-mode power amplifier for shaker armature excitation **EPA** p415
Improved single-ended solutions for ultrawide-band monolithic GaAs amplifiers **MAP** p458
Novel CMOS differential voltage current conveyor and its applications **CDS** p195
Synthesis of single-resistance-controlled oscillators using CFOAs: simple state-variable approach **CDS** p104
Theory and performance of parabolic true logarithmic amplifier **CDS** p223
Thermal design of gallium arsenide MESFETs for microwave power amplifiers **CDS** p45

ANALOGUE ELECTRONICS

3.3 V mixed-mode IC design using switched-current techniques for speech applications **CDS** p367
Assessing and comparing fault coverage when testing analogue circuits **CDS** p1
CMOS analogue neurone circuit with programmable activation functions utilising MOS transistors with optimised process/device parameters **CDS** p318
Collective process circuit that sorts **CDS** p145
Current conveyor based test structures for mixed-signal circuits **CDS** p213
Current-mode defuzzifier circuit to realise the centroid strategy **CDS** p265
Logic models for continuous time **CDT** p353
Testability aspects of folded source-coupled logic **CDS** p361
Versatile architecture for current-mode biquadratic filters in CMOS technology **CDS** p229

ANTENNA ACCESSORIES

Alternating phase-fed waveguide slot arrays with a single-layer multiple-way power divider **MAP** p425
Analysis of an open-ended waveguide radiator with dielectric plug **MAP** p126
Characteristics of aperture-coupled coplanar microstrip subarrays **MAP** p137
Determining the polarisation properties of an antenna using arbitrary and unknown field probes **MAP** p431
Experimental and simulation studies of the coaxially fed U-slot rectangular patch antenna **MAP** p354
FD-TD design of short backfire antennas **MAP** p1
Microstrip-fed array of multisegment dielectric resonator antennas **MAP** p472
Planar resonant series-fed arrays **MAP** p67
Prediction of the electromagnetic performance of large ground-based impedance-loaded dielectric space-frame radomes **RSN** p9
Simple design of dual-beam leaky-wave antennas in microstrips **MAP** p397
Synthesis and analysis of a dual-reflector feed for the radiotelescope in Nancay **MAP** p289
Technique for predicting the electromagnetic performance of impedance-loaded dielectric space-frame radome components **RSN** p1
Trireflector compact antenna test range **MAP** p305
Wideband TM_{01}-mode travelling wave coupler **MAP** p315

ANTENNA ARRAYS

Adaptive update rate tracking using IMM nearest neighbour algorithm incorporating rapid re-looks **RSN** p195
Adaptivity of a real-symmetric array by DOA estimation and null steering **RSN** p245
Alternating phase-fed waveguide slot arrays with a single-layer multiple-way power divider **MAP** p425
Characteristics of aperture-coupled coplanar microstrip subarrays **MAP** p137
Comparison of the ultimate direction-finding capabilities of a number of planar array geometries **RSN** p321
Dimension-descent technique for electromagnetic problems **MAP** p372
Floquet-modal-based analysis for mutual coupling between elements in an array environment **MAP** p491
Microstrip-fed array of multisegment dielectric resonator antennas **MAP** p472
Mode change analysis of a two element oscillator-type antenna array **MAP** p483
Multilayer frequency-selective surfaces for millimetre and submillimetre wave applications **MAP** p415
Novel reflectarray element with variable phase characteristics **MAP** p149
Planar resonant series-fed arrays **MAP** p67
Polygon subdomain basis-function model for the ring element in FSS arrays **MAP** p209
Space-time adaptive processing for airborne radar with various array orientations **RSN** p330
Study of mutual coupling effect on radiated patterns of antenna arrays **MAP** p389
Technique for predicting the electromagnetic performance of impedance-loaded dielectric space-frame radome components **RSN** p1

ANTENNA THEORY

Accurate analysis and synthesis of annular ring microstrip antennas **MAP** p341
Axial ratio of a curl antenna **MAP** p488
Characteristics of aperture-coupled coplanar microstrip subarrays **MAP** p137
Corrugated soft sector horn with different beam properties in the two principal planes **MAP** p13
Dimension-descent technique for electromagnetic problems **MAP** p372
Efficient moment method for analysing printed wire loop antennas **MAP** p364
Experimental and simulation studies of the coaxially fed U-slot rectangular patch antenna **MAP** p354
Experimental and theoretical study of groove guide horn antennas at W-band **MAP** p311
Experimental studies of circular patches with slots **MAP** p421
Floquet-modal-based analysis for mutual coupling between elements in an array environment **MAP** p491
Interpolation of reflector surfaces by pseudosplines **MAP** p42
Method of moments analysis of a small aperture radial line slot antenna using the rectangular cavity Green's function **MAP** p498
Microwave modelling of optical diffraction grating devices **OPT** p221
Millimetre wave leaky wave antenna using an H-guide loaded with a corrugated ferrite **MAP** p443
Mode change analysis of a two element oscillator-type antenna array **MAP** p483
Moment-method analysis of circularly symmetric reflectors using bandlimited basis functions **MAP** p179
Moment method analysis of printed single-arm wire spiral antennas using curved segments **MAP** p261
Planar resonant series-fed arrays **MAP** p67
Polarisation-diversity phase-encoded patch-antenna transponder **MAP** p201
Polarisation properties of small printed spiral antennas with four resistively loaded arms **MAP** p131
Polygon subdomain basis-function model for the ring element in FSS arrays **MAP** p209
Prediction of the electromagnetic performance of large ground-based impedance-loaded dielectric space-frame radomes **RSN** p9
Quadrifilar conical helical antenna with travelling-wave current distribution **MAP** p53
Rigorous analysis of three-dimensional beam transmission through a dielectric slab **MAP** p173
Simple design of dual-beam leaky-wave antennas in microstrips **MAP** p397
Study of mutual coupling effect on radiated patterns of antenna arrays **MAP** p389
Synthesis and analysis of a dual-reflector feed for the radiotelescope in Nancay **MAP** p289
Technique for predicting the electromagnetic performance of impedance-loaded dielectric space-frame radome components **RSN** p1
Theoretical and experimental study of a cavity-backed annular-slot antenna **MAP** p337

ARRAY SIGNAL PROCESSING

Adaptivity of a real-symmetric array by DOA estimation and null steering **RSN** p245
Array pattern synthesis and robust beamforming for a complex sonar system **RSN** p370
Comparison of the ultimate direction-finding capabilities of a number of planar array geometries **RSN** p321
Direction finding on spread-spectrum signals using the time-domain filtered cross spectral density **RSN** p315
Direction-of-arrival and frequency estimations for narrowband sources using two single rotation invariance algorithms with the marked subspace **RSN** p234
Effects of motion on adaptive arrays **RSN** p15
IQML algorithm for multiple signal parameter estimation **RSN** p237
Novel high range resolution approach in microwave imaging **RSN** p177
Performance evaluation of an algorithm for multiple target angle tracking **RSN** p252
Statistical analysis of the eigenvector projection method for adaptive spatial filtering of interference **RSN** p57
Updating the Jacobi SVD for nonstationary data **VIS** p108

AUDIO EQUIPMENT

Stability of multichannel sound control systems **VIS** p1

AUTOMATA THEORY

Inversion of cellular automata iterations **CDT** p279
Logic models for continuous time **CDT** p353
Use of learning automata in distributed fuzzy logic processor training **CTA** p255

AUTOMATIC TEST SYSTEMS

Application of Kalman filtering for continuous real-time tracking of power system harmonics **GTD** p13
Assessing and comparing fault coverage when testing analogue circuits **CDS** p1
Automated parameter extraction for ultrasonic flaw analysis **SMT** p93
Classification of partial discharge sources in gas-insulated substations using novel preprocessing strategies **SMT** p17
Digital algorithms for measurement of voltage flicker **GTD** p175
Electrical systems identification using Golay complementary series **SMT** p267
Fault diagnosis of power transformers: application of fuzzy set theory, expert systems and artificial neural networks **SMT** p39
Modelling of capacitance tomography sensors **SMT** p203
Simulator for path-delay faults on mixed-level circuits **CDS** p236

BIOLOGICAL AND BIOMEDICAL SYSTEMS

Adaptive multiresolution analysis based evoked potential filtering **SMT** p149
Development of a fibre optic micro-optrode for intracellular pH measurements **OPT** p162
Development of micro-optrodes using sol-gel immobilisation **SMT** p241
Generalised predictive control (GPC): a powerful control tool in medicine **CTA** p8
Intelligent artefact identification in electroencephalography signal processing **SMT** p193
Intelligent signal processing of evoked potentials for anaesthesia monitoring and control **CTA** p354
Measurement of the magnetic field in the near-field region and self-inductance in free space due to a multiturn square-loop **SMT** p252
Multiobjective neural network for image reconstruction **VIS** p233

CABLES AND OVERHEAD LINES

AC circuit breakers: pollution flashover performance of various types of interrupter head **GTD** p50
Alternative to Monte Carlo method for the estimation of lightning incidence to overhead lines **GTD** p129
BEM analysis of electric field excited by overhead HV lines erected in built-up areas **SMT** p81
Calculation of thermal fields of underground cable systems with consideration of structural steels constructed in a duct bank **GTD** p541
Circulating current and hysteresis losses in screens, sheaths and armour of electric power cables–mathematical models and comparison with IEC Standard 287 **SMT** p101
Development of an energy function reflecting the transfer conductances for direct stability analysis in power systems **GTD** p503
Earthing effects of coated underground cables with metallic shields bonded to earth electrodes **GTD** p26
Evaluation of eddy losses due to high current leads in transformers **SMT** p34
Influence of earth connection on the operation of railway track circuits **EPA** p215
Methodology and computer package for generation rescheduling **GTD** p301
New concept in fault location for overhead distribution systems using superimposed components **GTD** p309
New concept in transmission line reclosure using high-frequency fault transients **GTD** p351
Online leakage current monitoring of 400 kV insulator strings in polluted areas **GTD** p515
Phase co-ordinate approach to calculate earth-fault current and shock voltage **EPA** p441
Response of underground multiconductor cable systems to external fields illumination [and reply] **SMT** p294
Statistical study for switching processes in compensated UHV transmission systems **GTD** p237

CALIBRATION

Determining the polarisation properties of an antenna using arbitrary and unknown field probes **MAP** p431
High-frequency phase measurement for optical rangefinding system **SMT** p141
Improved error-table compensation of A/D converters **CDS** p343
Instrumental delay calibration with zero baseline interferometry for VLBI time comparison **SMT** p181
Micromachined optical tunable filter for long term stability gas sensors **OPT** p350
Systolic implementation of higher-order CMAC and its application in colour calibration **CDS** p129
UHF couplers for gas-insulated substations: a calibration technique **SMT** p117

CAPACITORS

Exact analysis of a multipulse shunt converter compensator or Statcon. I. Performance **GTD** p213
PWM-controlled series compensation with low harmonic distortion **GTD** p555

CIRCUIT BREAKERS

AC circuit breakers: pollution flashover performance of various types of interrupter head **GTD** p50
Probabilistic approach for fault-section estimation in power systems based on a refined genetic algorithm **GTD** p160
Reliability concept for electric fuses **SMT** p87
Role of cooling fins in circuit breakers **GTD** p57

CIRCUIT CAD

Analysis and design of a fixed-frequency LCL-type series-resonant converter with capacitive output filter **CDS** p97
Design of heuristic algorithms based on Shannon expansion for low-power logic circuit synthesis **CDS** p355
High performance hardware accelerator for design-error simulation **CDS** p81
Synthesis of single-resistance-controlled oscillators using CFOAs: simple state-variable approach **CDS** p104
Total TCAD strategy for DFM in IC technology development **SMT** p63

CIRCUIT COMPONENTS

Calculation of losses in conductors due to chopped impulse currents, taking the skin effect into account **SMT** p111
Reliability concept for electric fuses **SMT** p87

CIRCUIT THEORY AND DESIGN

Analysis and design of a fixed-frequency LCL-type series-resonant converter with capacitive output filter **CDS** p97
Characterisation of radio frequency heating systems in industry using a network analyser **SMT** p215
CMOS analogue neurone circuit with programmable activation functions utilising MOS transistors with optimised process/device parameters **CDS** p318
Current conveyor based test structures for mixed-signal circuits **CDS** p213
Delay time sensitivity analysis of multi-generation BiCMOS digital circuits **CDS** p60
Design of heuristic algorithms based on Shannon expansion for low-power logic circuit synthesis **CDS** p355
Design of loop antennas and matching networks for low-noise RF receivers: analytic formula approach **MAP** p274
Diagnosis of multifaults in analogue circuits using multilayer perceptrons **CDS** p149
DOORS: an object-oriented CAD system for high level synthesis **CDT** p331
Finding all DC solutions of nonlinear resistive circuits by exploring both polyhedral and rectangular circuits **CDS** p17
Frequency response of N-port planar gyromagnetic circuits using the mutual energy-finite element method **MAP** p221
GRASS: an efficient gate re-assignment algorithm for inverter minimisation in post technology mapping **CDT** p348
Hardware/software partitioning of embedded systems with multiple hardware processes **CDT** p285
High performance hardware accelerator for design-error simulation **CDS** p81
IC compatible planar inductors on silicon **CDS** p29
Improved control signal distribution for very wide VLSI data buses **CDT** p209
Improved PIN diode circuit model with automatic parameter extraction technique **CDS** p329
Knowledge based automatic simulation model generation system **CDS** p88
Logic models for continuous time **CDT** p353
Logic synthesis of a PLL phase frequency detector **CDT** p381
Multilevel logic synthesis technique for efficient verification testing **CDT** p83
New results on the resistance of an n-cube **CDS** p51
Optimum partitioning problem for rectilinear VLSI layout **CDT** p155
Parallel logic simulation with assignable delays on a vector multiprocessor computer **CDS** p5
Parallel sparse-matrix solution for direct circuit simulation on a transputer array **CDS** p335
Performance-driven macro-block placer for architectural evaluation of ASIC designs **CDS** p190
Planar constrained terminals over-the-cell router **CDT** p121
Predicting the complexity of large combinational circuits through symbolic spectral analysis of their functional specifications **CDT** p343
Synthesis of reflection-mode prototype networks with dissipative circuit elements **MAP** p437
Synthesis of single-resistance-controlled oscillators using CFOAs: simple state-variable approach **CDS** p104
Total TCAD strategy for DFM in IC technology development **SMT** p63
Treatment of two-dimensional E-plane bandstop filters using the finite element method **MAP** p411

CLOSED LOOP SYSTEMS

Adaptive integral control of time-delay systems **CTA** p531
Adaptive performance/robust control design for discrete systems **CTA** p95
Autotuning temperature control using identification by multifrequency binary sequences **CTA** p233
Case study comparison of robust linear quadratic design and mixed-sensitivity H∞ control **CTA** p476
Designing stabilising controllers and observers for uncertain linear systems with time-varying delay **CTA** p331
Discretisation of continuous-time control systems with guaranteed stability [comment with reply] **CTA** p277
Estimation of speed and armature temperature in a brushed DC drive using the extended Kalman filter **EPA** p13
Estimation of speed, stator temperature and rotor temperature in cage induction motor drive using the extended Kalman filter algorithm **EPA** p301
Integrated approach to eigenstructure assignment by output feedback control **CTA** p435
New identification based weighted H∞ norm approximation scheme and its applications to controller reduction **CTA** p61
Newton's approach to gain-controlled robust pole placement **CTA** p439
Reduced-order estimator for closed-loop online estimation of cross-directional parameters in a plastics extrusion process **CTA** p549
Robust control of interval plants: a time domain method **CTA** p347
Robust model-following control for a robot manipulator **CTA** p53
Robust pole assignment in uncertain systems **CTA** p217
Time-domain method for the design of optimal linear controllers **CTA** p287
Tuning PID controllers for integrating processes **CTA** p385
Unified PID design method based on a maximum peak resonance specification **CTA** p566

CMOS INTEGRATED CIRCUITS

3.3 V mixed-mode IC design using switched-current techniques for speech applications **CDS** p367
Class-AB SiC CMOS power opamp with stable voltage gain over wide temperature range **CDS** p22
CMOS analogue neurone circuit with programmable activation functions utilising MOS transistors with optimised process/device parameters **CDS** p318
CMOS switched current phase-locked loop **CDS** p75
Current conveyor based test structures for mixed-signal circuits **CDS** p213
Current-mode defuzzifier circuit to realise the centroid strategy **CDS** p265
Design considerations and implementation of very low frequency continuous-time CMOS monolithic filters **CDS** p68

Design of heuristic algorithms based on Shannon expansion for low-power logic circuit synthesis **CDS** p355
High-density 16/8/4-bit configurable multiplier **CDS** p272
Logic synthesis of a PLL phase frequency detector **CDT** p381
New static multi-output carry lookahead CMOS adders **CDS** p350
Novel architecture for ATM QoS management **COM** p412
Novel CMOS differential voltage current conveyor and its applications **CDS** p195
Systolic implementation of higher-order CMAC and its application in colour calibration **CDS** p129
Testability aspects of folded source-coupled logic **CDS** p361
Versatile architecture for current-mode biquadratic filters in CMOS technology **CDS** p229
Wired-OR property and improved structure of recovered energy logic (REL) **CDS** p378

CODES AND DECODING

Adaptation of hidden Markov model for telephone speech recognition and speaker adaptation **VIS** p129
Analysis and implementation of an adjustable-rate multilevel coded modulation system **COM** p1
BCJR trellis construction for binary linear block codes **COM** p367
Bit-serial multiplication in GF(2^m) using irreducible all-one polynomials **CDT** p391
Calculating the expected synchronisation delay for T-code sets **COM** p121
Classification of partial discharge sources in gas-insulated substations using novel preprocessing strategies **SMT** p17
Closed-loop motion compensation for video coding standards **VIS** p227
Compression of SAR images using KLT, VQ and mixture of principal components **RSN** p113
Conference key distribution system with user anonymity based on algebraic approach **CDT** p145
Constructing quasi-optimal subfamilies of GMW sequences suitable for CDMA applications **COM** p99
Construction and comparison of periodic digital sequence sets **COM** p361
Critique of the paper 'Novel design of arithmetic coding for data compression' **CDT** p394
Digital signature with a subliminal channel **CDT** p387
Dual basis systolic multipliers for GF(2^m) **CDT** p43
Edge oriented block motion estimation for video coding **VIS** p136
Effects of bias and characteristic phase on the crosscorrelation of m-sequences **COM** p217
Electrical systems identification using Golay complementary series **SMT** p267
Enhanced interframe coding based on morphological segmentation **VIS** p220
Enhancing the security of El Gamal's signature scheme **CDT** p47
Error-resilience improvement for block-transform video coders **VIS** p369
Evaluation of the power spectral density of guided scrambling coded sequences **COM** p70
Fast codeword search algorithm for real-time codebook generation in adaptive VQ **VIS** p278
Generalised method for pruning an FFT type of transform **VIS** p189
Generic systolic array for genetic algorithms **CDT** p107
Global linear complexity analysis of filter keystream generators **CDT** p33
Index-compressed vector quantisation based on index mapping **VIS** p31
Logic for verifying public-key cryptographic protocols **CDT** p28
Low complexity sub-band image coding with pseudo QMF and pyramidal lattice VQ **VIS** p81
Low-decoding-complexity TDM coded modulation with unequal error protection **COM** p372
Low-delay subband CELP coding for wideband speech **VIS** p313
Modified multiple stack algorithm for decoding convolutional codes **COM** p221
Multirate coding for mobile communications link adaptation **COM** p211
Multistage trellis coded quantisation (MS-TCQ) design and performance **COM** p61
Novel image compression method using edge-oriented classifier and novel predictive noiseless coding method **VIS** p361
On-chip memory module designs for video-signal processing **CDS** p138
Performance analysis based on co-channel interference statistics of indoor CDMA systems with RAKE receiver and power control under multipath fading **COM** p173
Performance analysis of noncoherent DS-CDMA systems in a Nakagami fading channel with arbitrary parameters **COM** p166
Performance improvement of fibre-optic code-division multiple-access systems by using error-correction codes **COM** p316
Properties of contour codes **VIS** p145
Reduced-tree-based soft decoding for block-coded modulation **COM** p79
Searching for TCM codes using genetic algorithms **COM** p6
Small improvements in half-rate convolutional codes with popular constraint lengths for applications in satellite communications **COM** p199
Threshold decision technique for direct sequence code synchronisation in a fading mobile channel **COM** p155
Transcoding of single-layer MPEG video into lower rates **VIS** p377
Trellis decoding technique for binary-adder channel with M users and its application in LANs **COM** p65
V-fairness (t, n) secret sharing scheme **CDT** p245
Waveform distortion in a gain-saturated semiconductor optical amplifier for NRZ and Manchester formats **OPT** p433

COMMUNICATION SYSTEM THEORY

Access flow control scheme for ATM networks using neural-network-based traffic prediction **COM** p295
Analysis and design of survivable telecommunications networks **COM** p322
Analysis of ATM cell loss for systems with on/off traffic sources **COM** p129
Analysis of uplink and downlink capacities for two-tier cellular system **COM** p405
Asymptotic properties of queuing networks **CDT** p249
BER performance of multiwavelength optical cross-connected networks with deflection routing **COM** p114
Biorthogonal pulse position modulated direct-sequence CDMA for wireless local communications **COM** p40
Cellular CDMA overlay situations **COM** p402
Cluster design of M-ary orthogonal DS/CDMA cellular system with Rayleigh fading and lognormal shadowing **COM** p265
Computer model for analysing digital magnetic recording systems **COM** p289
Constructing quasi-optimal subfamilies of GMW sequences suitable for CDMA applications **COM** p99
Construction and comparison of periodic digital sequence sets **COM** p361
Coupled reservation protocols for hierarchical single-hop photonic networks **COM** p247
Cycle-slipping probability of first-order phase-locked loop using transient analysis **COM** p357
"Dead reckoning"–a primitive and efficient self-routing protocol for ultrafast mesh networks **COM** p135
Effect of bandlimiting filters on multidimensional digital communication system in Gaussian noise **COM** p150
Effects of bias and characteristic phase on the crosscorrelation of m-sequences **COM** p217
Engineering of a CDMA radio uplink for a mobile radio demonstration system **COM** p341
Enhancing the security of El Gamal's signature scheme **CDT** p47
Estimation-based call admission control with delay and loss guarantees in ATM networks **COM** p85
Explicit loss indication and accurate RTO estimation for TCP error recovery using satellite links **COM** p47
Hidden preamble detector for acquisition of frequency hopping multiple-access communication system **COM** p161
Integrated concurrency control protocol for hard real-time database systems **CDT** p214
Investigation of overload control algorithms for SCPs in the intelligent network **COM** p419
Logic for verifying public-key cryptographic protocols **CDT** p28
Loss periods in ATM output multiplexer **COM** p301
Markov analysis of multichannel star-connected network with channel sensing and collision detection **COM** p331
Modelling multimedia traffic over ATM using MMBP **COM** p307
New multiuser detector for asynchronous CDMA **COM** p336
Nonuniform traffic analysis on a class of self-routing networks **COM** p143
Novel architecture for ATM QoS management **COM** p412
Novel synchronous CDMA multiuser detection scheme: orthogonal decision-feedback detection and its performance study **COM** p275
Performance analysis and design of token-passing networks with two message priorities **COM** p11
Performance analysis based on co-channel interference statistics of indoor CDMA systems with RAKE receiver and power control under multipath fading **COM** p173
Performance analysis of delay-loss priority mechanism using Markov modulated arrival stream **COM** p311
Performance analysis of noncoherent DS-CDMA systems in a Nakagami fading channel with arbitrary parameters **COM** p166
Performance analysis of space-priority mechanisms in an input and output queueing ATM switch **COM** p229
Performance improvement of fibre-optic code-division multiple-access systems by using error-correction codes **COM** p316
Performance of dynamic path optical networks **OPT** p235
Pollaczek-Khinchin formula for the M/G/1 queue in discrete time with vacations **CDT** p222
Software library for analysing M/G/1-type systems and its application in computer network performance evaluation **COM** p237
Spreading code protocol enabling programmable complexity/performance for CDMA local wireless networks **COM** p395
Systematic design of key establishment protocols based on one-way functions **CDT** p93
Trellis decoding technique for binary-adder channel with M users and its application in LANs **COM** p65
Two-stage nonlinear detector in DS/SSMA communications with impulse noise **COM** p387

COMPUTATIONAL COMPLEXITY

Adaptive resampling algorithm for image zooming **VIS** p207
Analysis of delays in converting from a redundant representation **CDT** p219
Application of mathematical programming to the fixed channel assignment problem in mobile radio networks **COM** p257
BCJR trellis construction for linear block codes **COM** p367
Block momentum-LMS algorithm based on the method of parallel tangents **VIS** p49
Block tridiagonal matrix formulation for inhomogeneous penetrable cylinders **MAP** p184
Comparison of dynamic and static load-balancing strategies in heterogeneous distributed systems **CDT** p100
Dynamic systems reliability evaluation using uncertainty techniques for performance monitoring **CTA** p103
Edge oriented block motion estimation for video coding **VIS** p136
Efficient weighted least-squares algorithm for the design of FIR filters **VIS** p244
Estimation-based call admission control with delay and loss guarantees in ATM networks **COM** p85
Fast codeword search algorithm for real-time codebook generation in adaptive VQ **VIS** p278
Global linear complexity analysis of filter keystream generators **CDT** p33
High performance hardware accelerator for design-error simulation **CDS** p81
Low complexity sub-band image coding with pseudo QMF and pyramidal lattice VQ **VIS** p81
Low-decoding-complexity TDM coded modulation with unequal error protection **COM** p372
Numerically stable algorithm for computing Wigner-Ville distribution **VIS** p46
Optimum partitioning problem for rectilinear VLSI layout **CDT** p155
Parallel logic simulation with assignable delays on a vector multiprocessor computer **CDS** p5
Planar constrained terminals over-the-cell router **CDT** p121
Predictable distributed dynamic scheduling in RTDOS **CDT** p195
Predicting the complexity of large combinational circuits through symbolic spectral analysis of their functional specifications **CDT** p343
UTD-based model for prediction of propagation path loss and shadowing variability in urban mobile environments **MAP** p367

COMPUTER APPLICATIONS

Accurate analysis and synthesis of annular ring microstrip antennas **MAP** p341
Analysis and design of a fixed-frequency LCL-type series-resonant converter with capacitive output filter **CDS** p97
Automated parameter extraction for ultrasonic flaw analysis **SMT** p93
Classification of partial discharge sources in gas-insulated substations using novel preprocessing strategies **SMT** p17
CMOS analogue neurone circuit with programmable activation functions utilising MOS transistors with optimised process/device parameters **CDS** p318
Computer-based strategy for the restoration problem in electric power distribution systems **GTD** p389

Constrained time-efficient and smooth cubic spline trajectory generation for industrial robots **CTA** p467
Convolved and simultaneous two-mode input shapers **CTA** p515
Current conveyor based test structures for mixed-signal circuits **CDS** p213
Delay time sensitivity analysis of multi-generation BiCMOS digital circuits **CDS** p60
Design of heuristic algorithms based on Shannon expansion for low-power logic circuit synthesis **CDS** p355
Diagnosis of multifaults in analogue circuits using multilayer perceptrons **CDS** p149
Digital algorithms for measurement of voltage flicker **GTD** p175
Discrete-time model reference adaptive control for nonminimum phase systems with disturbances using approximate inverse systems **CTA** p447
DOORS: an object-oriented CAD system for high level synthesis **CDT** p331
Dynamic models of certain DC and low frequency electric field sensors **SMT** p247
Dynamic parity logging disk arrays for engineering database systems **CDT** p255
Electrical systems identification using Golay complementary series **SMT** p267
Exact determination of the limit cycles in relay control systems with additional nonlinearities in the feedback loops **CTA** p269
Expert adaptive control applied to turbogenerator systems **CTA** p2
Finding all DC solutions of nonlinear resistive circuits by exploring both polyhedral and rectangular circuits **CDS** p17
Full fuzzy control of a DSP-based high performance induction motor drive **CTA** p361
GRASS: an efficient gate re-assignment algorithm for inverter minimisation in post technology mapping **CDT** p348
Hardware/software partitioning of embedded systems with multiple hardware processes **CDT** p285
HDL-specific source level behavioural optimisation **CDT** p138
High performance hardware accelerator for design-error simulation **CDS** p81
IC compatible planar inductors on silicon **CDS** p29
Improved control signal distribution for very wide VLSI data buses **CDT** p209
Improved PIN diode circuit model with automatic parameter extraction technique **CDS** p329
Improving the accuracy of the rotor resistance estimate for vector-controlled induction machines **EPA** p285
Inversion control of nonlinear systems with neural network modelling **CTA** p481
Knowledge based automatic simulation model generation system **CDS** p88
Lattice Boltzmann method for wave propagation in urban microcells **MAP** p251
Modelling of capacitance tomography sensors **SMT** p203
Multilevel logic synthesis technique for efficient verification testing **CDT** p83
Neural-network connection-admission control for ATM networks **COM** p93
Neural network for representation of hysteresis loops **SMT** p263
On-line adaptive control in the hot rolling of steel **CTA** p15
Optimising train movements through coast control using genetic algorithms **EPA** p65
Optimum partitioning problem for rectilinear VLSI layout **CDT** p155
Parallel logic simulation with assignable delays on a vector multiprocessor computer **CDS** p5
Parallel sparse-matrix solution for direct circuit simulation on a transputer array **CDS** p335
Parameter monitoring using neural-network-processed chromaticity **SMT** p257
PC-based real-time active sonar simulator **RSN** p227
Performance-driven macro-block placer for architectural evaluation of ASIC designs **CDS** p190
Piecewise linear approximation applied to nonlinear function of a neural network **CDS** p313
Planar constrained terminals over-the-cell router **CDT** p121
Predicting the complexity of large combinational circuits through symbolic spectral analysis of their functional specifications **CDT** p343
Prediction of the electromagnetic performance of large ground-based impedance-loaded dielectric space-frame radomes **RSN** p9
Priority assignment in distributed real-time databases using optimistic concurrency control **CDT** p324
Quadratic sensitivities for power system steady-state control **GTD** p317
Real time stabilisation of a triple link inverted pendulum using single control input **CTA** p498
Simple model of a transport/diffusion system **CTA** p459
Simulator for path-delay faults on mixed-level circuits **CDS** p236
Software library for analysing M/G/1-type systems and its application in computer network performance evaluation **COM** p237
Source level optimisation of VHDL for behavioural synthesis **CDT** p1
Synthesis of single-resistance-controlled oscillators using CFOAs: simple state-variable approach **CDS** p104
Total TCAD strategy for DFM in IC technology development **SMT** p63
True average current predictive controller for four-wire PWM reversible rectifiers **EPA** p397
VHDL generation from hierarchical Petri net specifications of parallel controllers **CDT** p127

COMPUTER COMMUNICATIONS

Asymptotic properties of queuing networks **CDT** p249
Capacity bounding of coherence multiplexed local area networks due to interferometric noise **OPT** p69
Comparison of dynamic and static load-balancing strategies in heterogeneous distributed systems **CDT** p100
Coupled reservation protocols for hierarchical single-hop photonic networks **COM** p247
"Dead reckoning"–a primitive and efficient self-routing protocol for ultrafast mesh networks **COM** p135
Integrated concurrency control protocol for hard real-time database systems **CDT** p214
Performance analysis and design of token-passing networks with two message priorities **COM** p11
Performance analysis of FDDI LANs using numerical methods **CDT** p149
Security management architecture for access control to network resources **CDT** p362
Software library for analysing M/G/1-type systems and its application in computer network performance evaluation **COM** p237
Trellis decoding technique for binary-adder channel with M users and its application in LANs **COM** p65

CONTROL SYSTEMS ANALYSIS

Adaptive integral control of time-delay systems **CTA** p531
Analysis and redesign of an antilock brake system controller **CTA** p413
Analysis of the single-phase four-quadrant PWM converter resulting in steady-state and small-signal dynamic models **EPA** p241
Autotuning temperature control using identification by multifrequency binary sequences **CTA** p233
Case study comparison of robust linear quadratic design and mixed-sensitivity H∞ control **CTA** p476
Co-ordinated control of multiple robotic manipulators handling a common object–theory and experiments **CTA** p73
Constrained cautious stable predictive control **CTA** p313
Control-system synthesis for open-loop unstable process with time delay **CTA** p334
Convolved and simultaneous two-mode input shapers **CTA** p515
Damping of multimodal oscillations in power systems using variable structure control techniques **GTD** p323
Designing stabilising controllers and observers for uncertain linear systems with time-varying delay **CTA** p331
Discrete-time model reference adaptive control for nonminimum phase systems with disturbances using approximate inverse systems **CTA** p447
Discretisation of continuous-time control systems with guaranteed stability [comment with reply] **CTA** p277
Driving circuit for ultrasonic motor servo drive with variable-structure adaptive model-following control **EPA** p199
Dynamic modelling of a unified power flow controller **GTD** p7
Environmental/economic dispatch using fuzzy logic controlled genetic algorithms **GTD** p377
Estimation of speed and armature temperature in a brushed DC drive using the extended Kalman filter **EPA** p13
Evaluation of load shedding to prevent dynamic voltage instability based on extended fuzzy reasoning **GTD** p81
Exact determination of the limit cycles in relay control systems with additional nonlinearities in the feedback loops **CTA** p269
Frequency domain design method for uncertain systems under some unknown-but-bounded disturbances **CTA** p225
H∞ control for a sensorless permanent-magnet synchronous drive **EPA** p173
H∞ robust control design for dynamic ship positioning **CTA** p110
High performance control of the series-parallel resonant converter **EPA** p131
Implementation of intelligent self-organising controllers in DSP controlled electromechanical drives **CTA** p324
Improvement of network damping and transient stability by active and reactive power control **GTD** p125
Indices for selecting the best location of PSSs or FACTS-based stabilisers in multimachine power systems: a comparative study **GTD** p155
Indirect field-oriented induction motor drive with fuzzy detuning correction and efficiency optimisation controls **EPA** p37
Integrated approach to eigenstructure assignment by output feedback control **CTA** p435
Low test-application time method for EEPLA testing **CDT** p39
LQ control of sinusoidal current PWM rectifiers **EPA** p95
LQG approach for the high-precision track control of ships **CTA** p121
Model reference adaptive control of dynamic output feedback linearisable systems with unknown high frequency gain **CTA** p427
Multiobjective fuzzy genetic algorithm optimisation approach to nonlinear control system design **CTA** p137
Neural implementation of GMV control schemes based on affine input/output models **CTA** p521
New identification based weighted H∞ norm approximation scheme and its applications to controller reduction **CTA** p61
Newton's approach to gain-controlled robust pole placement **CTA** p439
Nonlinear autopilot control design for a 2-DOF helicopter model **CTA** p612
Optimal quadratic guaranteed cost control of a class of uncertain time-delay systems **CTA** p183
Optimal traffic control at railway junctions **EPA** p140
Output feedback sliding mode design for linear uncertain systems **CTA** p209
Output feedback TCSC controllers to improve damping of meshed multi-machine power systems **GTD** p243
pH control: handling nonlinearity and deadtime with fuzzy relational model-based control **CTA** p263
Predictive analogue generator excitation controller **GTD** p271
Quadratic guaranteed cost and disc pole location control for discrete-time uncertain systems **CTA** p545
Quadratic sensitivities for power system steady-state control **GTD** p317
Quantitative design of uncertain multivariable control system with an inner-feedback loop **CTA** p195
Real time stabilisation of a triple link inverted pendulum using single control input **CTA** p498
Realisation of two-degrees-of-freedom compensators **CTA** p589
Recursive identification of certain structured time-varying state-space models **CTA** p489
Reduced-order estimator for closed-loop online estimation of cross-directional parameters in a plastics extrusion process **CTA** p549
Robust control methodology applied to the design of a combined steering/stabiliser system for warships **CTA** p128
Robust control of interval plants: a time domain method **CTA** p347
Robust decentralised design for multiple FACTS damping controllers **GTD** p61
Robust PM synchronous motor servo drive with variable-structure model-output-following control **EPA** p317
Robust pole assignment in uncertain systems **CTA** p217
Robust speed control of brushless DC motor using adaptive input-output linearisation technique **EPA** p469
Selection of installing locations and feedback signals of FACTS-based stabilisers in multimachine power systems by reduced-order modal analysis **GTD** p263
Simplified predictive instantaneous current control for single-phase and three-phase voltage-fed PFC converters **EPA** p46
Simulated annealing for multiobjective control system design **CTA** p582
Simultaneous stabilisation of power systems using genetic algorithms **GTD** p39
Sliding mode and fuzzy control of toggle mechanism using PM synchronous servo-motor drive **CTA** p393
Stability analysis of fuzzy multivariable systems: vector Lyapunov function approach **CTA** p403
Time-domain method for the design of optimal linear controllers **CTA** p287
True average current predictive controller for four-wire PWM reversible rectifiers **EPA** p397
Tuning PID controllers for integrating processes **CTA** p385
Unified PID design method based on a maximum peak resonance specification **CTA** p566

CONTROL SYSTEM SYNTHESIS

Analysis and redesign of an antilock brake system controller **CTA** p413
Analysis of the single-phase four-quadrant PWM converter resulting in steady-state and small-signal dynamic models **EPA** p241

Case study comparison of robust linear quadratic design and mixed-sensitivity H∞ control **CTA** p476
Co-ordinated control of multiple robotic manipulators handling a common object–theory and experiments **CTA** p73
Control-system synthesis for open-loop unstable process with time delay **CTA** p334
Convolved and simultaneous two-mode input shapers **CTA** p515
Damping of multimodal oscillations in power systems using variable structure control techniques **GTD** p323
Discrete-time model reference adaptive control for nonminimum phase systems with disturbances using approximate inverse systems **CTA** p447
Driving circuit for ultrasonic motor servo drive with variable-structure adaptive model-following control **EPA** p199
Environmental/economic dispatch using fuzzy logic controlled genetic algorithms **GTD** p377
Frequency domain design method for uncertain systems under some unknown-but-bounded disturbances **CTA** p225
H∞ control for a sensorless permanent-magnet synchronous drive **EPA** p173
H∞ robust control design for dynamic ship positioning **CTA** p110
High performance control of the series-parallel resonant converter **EPA** p131
Implementation of a self-tuning AVR **CTA** p32
Improvement of network damping and transient stability by active and reactive power control **GTD** p125
Indices for selecting the best location of PSSs or FACTS-based stabilisers in multimachine power systems: a comparative study **GTD** p155
Indirect field-oriented induction motor drive with fuzzy detuning correction and efficiency optimisation controls **EPA** p37
LQ control of sinusoidal current PWM rectifiers **EPA** p95
LQG approach for the high-precision track control of ships **CTA** p121
Multiobjective fuzzy genetic algorithm optimisation approach to nonlinear control system design **CTA** p137
Neural implementation of GMV control schemes based on affine input/output models **CTA** p521
New identification based weighted H∞ norm approximation scheme and its applications to controller reduction **CTA** p61
Nonlinear autopilot control design for a 2-DOF helicopter model **CTA** p612
Optimal quadratic guaranteed cost control of a class of uncertain time-delay systems **CTA** p183
Optimal traffic control at railway junctions **EPA** p140
Optimising train movements through coast control using genetic algorithms **EPA** p65
Output feedback sliding mode design for linear uncertain systems **CTA** p209
Output feedback TCSC controllers to improve damping of meshed multi-machine power systems **GTD** p243
pH control: handling nonlinearity and deadtime with fuzzy relational model-based control **CTA** p263
Predictive analogue generator excitation controller **GTD** p271
Quadratic guaranteed cost and disc pole location control for discrete-time uncertain systems **CTA** p545
Quantitative design of uncertain multivariable control system with an inner-feedback loop **CTA** p195
Real time stabilisation of a triple link inverted pendulum using single control input **CTA** p498
Realisation of two-degrees-of-freedom compensators **CTA** p589
Robust control methodology applied to the design of a combined steering/stabiliser system for warships **CTA** p128
Robust decentralised design for multiple FACTS damping controllers **GTD** p61
Robust PM synchronous motor servo drive with variable-structure model-output-following control **EPA** p317
Robust speed control of brushless DC motor using adaptive input-output linearisation technique **EPA** p469
Simplified predictive instantaneous current control for single-phase and three-phase voltage-fed PFC converters **EPA** p46
Simulated annealing for multiobjective control system design **CTA** p582
Simultaneous stabilisation of power systems using genetic algorithms **GTD** p39
Sliding mode and fuzzy control of toggle mechanism using PM synchronous servo-motor drive **CTA** p393
Stability analysis of fuzzy multivariable systems: vector Lyapunov function approach **CTA** p403
Time-domain method for the design of optimal linear controllers **CTA** p287
True average current predictive controller for four-wire PWM reversible rectifiers **EPA** p397
Tuning PID controllers for integrating processes **CTA** p385

CONVERTORS

Active power filter with sliding mode control **GTD** p564
Analysis and design of a flyback zero-current switched quasiresonant AC/DC converter **EPA** p401
Analysis and design of a three-level PWM converter system for railway-traction applications **EPA** p357
Analysis and simulation of a high-speed two-phase AC drive for aerospace applications **EPA** p149
Analysis of neural and fuzzy-power electronic control **SMT** p25
Analysis of the single-phase four-quadrant PWM converter resulting in steady-state and small-signal dynamic models **EPA** p241
Analytical solution to harmonic characteristics of traction PWM converters **EPA** p158
Economic UPS structure with phase-controlled battery charger and input-power-factor improvement **EPA** p221
Effects of flux level on a CSI-fed field-oriented induction motor **EPA** p295
Exact analysis of a multipulse shunt converter compensator or Statcon. I. Performance **GTD** p213
Exact analysis of a multipulse shunt convertor compensator or Statcon. II. Analysis **GTD** p219
Fibre-optic voltage sensor using an optical lever **OPT** p253
High-frequency switching-mode power amplifier for shaker armature excitation **EPA** p415
High performance control of the series-parallel resonant converter **EPA** p131
High power GTO thyristor chopper applications with passive snubber energy recovery **EPA** p381
Improved simulation of HVDC converter transformers in electromagnetic transient programs **GTD** p100
Losses in PWM converters using IGBTs: on the effect of bus-clamping on the distortion of the AC-side currents **EPA** p169
LQ control of sinusoidal current PWM rectifiers **EPA** p95
Mathematical models of a three-level advanced static VAr compensator **GTD** p201
Modelling and design of a reversible three-phase switching mode rectifier **EPA** p389
Novel 18-step diode rectifier circuit with nonisolated phase shifting transformers **EPA** p1
Novel four-bridge PWM static VAr compensator **EPA** p249
Open-loop VAr compensator for industrial applications, using a single PWM pattern **EPA** p257
Optimised input filter design and low-loss switching techniques for a practical matrix converter **EPA** p53
Parallel connection of single-switch three-phase power-factor correction converters for interleaved switching **EPA** p423
Regenerative- and plug-braking operations of inverter-fed asynchronous motors **EPA** p453
Robust decentralised design for multiple FACTS damping controllers **GTD** p61
Sequence impedance and equivalent circuit of a converter system **EPA** p409
Simple voltage generator for producing well-defined nanosecond pulses of amplitudes in excess of 1 kV **SMT** p229
Simplified predictive instantaneous current control for single-phase and three-phase voltage-fed PFC converters **EPA** p46
Single-phase matrix converter **EPA** p235
Single-phase step-up/down rectifier with improved supply current waveform **EPA** p6
Switching loss minimised space vector PWM method for IGBT three-level inverter **EPA** p182
Three-phase AC/single-phase AC converters with resonant circuits for high operating frequencies **EPA** p207
True average current predictive controller for four-wire PWM reversible rectifiers **EPA** p397
Zero-voltage-switching three-phase single-stage power factor correction convertor **EPA** p343

CYBERNETICS AND ROBOTICS

Automated parameter extraction for ultrasonic flaw analysis **SMT** p93
Co-ordinated control of multiple robotic manipulators handling a common object–theory and experiments **CTA** p73
Constrained time-efficient and smooth cubic spline trajectory generation for industrial robots **CTA** p467
Dynamic systems reliability evaluation using uncertainty techniques for performance monitoring **CTA** p103
Effects of 'overmakes' on company performance **SMT** p57
Logic for verifying public-key cryptographic protocols **CDT** p28
Optimal planning technique with a fuzzy co-ordinator for an intelligent robot's part assembly **CTA** p45
Robust model-following control for a robot manipulator **CTA** p53
Robust self-tuning rotated fuzzy basis function controller for robot arms **CTA** p293
Subsea vehicle path planning using nonlinear programming and constructive solid geometry **CTA** p143
Variable structure adaptive control of robot manipulators **CTA** p167

DATA COMMUNICATION

Asymptotic properties of queuing networks **CDT** p249
Capacity bounding of coherence multiplexed local area networks due to interferometric noise **OPT** p69
Comparison of dynamic and static load-balancing strategies in heterogeneous distributed systems **CDT** p100
Coupled reservation protocols for hierarchical single-hop photonic networks **COM** p247
"Dead reckoning"–a primitive and efficient self-routing protocol for ultrafast mesh networks **COM** p135
Distributed algorithms for mobile hosts **CDT** p49
Enhancing the security of El Gamal's signature scheme **CDT** p47
Integrated concurrency control protocol for hard real-time database systems **CDT** p214
Logic for verifying public-key cryptographic protocols **CDT** p28
Performance analysis and design of token-passing networks with two message priorities **COM** p11
Performance analysis of FDDI LANs using numerical methods **CDT** p149
Predictable distributed dynamic scheduling in RTDOS **CDT** p195
Security management architecture for access control to network resources **CDT** p362
Software library for analysing M/G/1-type systems and its application in computer network performance evaluation **COM** p237
Stochastic model of a cache-coherency overhead in SCI rings **CDT** p175
Systematic design of key establishment protocols based on one-way functions **CDT** p93
Trellis decoding technique for binary-adder channel with M users and its application in LANs **COM** p65

DATA HANDLING

Classification of partial discharge sources in gas-insulated substations using novel preprocessing strategies **SMT** p17
Collective process circuit that sorts **CDS** p145
Critique of the paper 'Novel design of arithmetic coding for data compression' **CDT** p394
Data visualisation and identification of anomalies in power system state estimation using artificial neural networks **GTD** p445
Fuzzy rule-based expert system for power system fault diagnosis **GTD** p186
Simple model of a transport/diffusion system **CTA** p459

DATA SECURITY

Bit-serial multiplication in GF(2^m) using irreducible all-one polynomials **CDT** p391
Conference key distribution system with user anonymity based on algebraic approach **CDT** p145
Digital signature with a subliminal channel **CDT** p387
Efficient cheater identification method for threshold schemes **CDT** p23
Enhancing the security of El Gamal's signature scheme **CDT** p47
Global linear complexity analysis of filter keystream generators **CDT** p33
Integrated concurrency control protocol for hard real-time database systems **CDT** p214
Logic for verifying public-key cryptographic protocols **CDT** p28
New algorithms for asynchronous communication **CDT** p227
Security management architecture for access control to network resources **CDT** p362
Systematic design of key establishment protocols based on one-way functions **CDT** p93
V-fairness (t, n) secret sharing scheme **CDT** p245

DIELECTRIC MATERIALS AND DEVICES

Calix(8)arene LB superlattices: pyroelectric molecular baskets **CDS** p108
Electrical stresses applied to stator insulation in low-voltage induction motors fed by PWM drives **EPA** p191
Experimental investigation of optimum thickness of a piezoelectric element for cantilever actuation **SMT** p45
Microstrip-fed array of multisegment dielectric resonator antennas **MAP** p472
Thermally stimulated depolarisation current measurements and interpretation [polymer glass transition studies] **SMT** p168

DIGITAL ARITHMETIC

Analysis of delays in converting from a redundant representation **CDT** p219
Bit-serial multiplication in GF(2^m) using irreducible all-one polynomials **CDT** p391
Finite wordlength effects in two-dimensional multirate periodically time-varying filters **CDS** p277
Generalised hybrid arithmetic canonical expansions for completely specified quaternary functions **CDS** p201
Global linear complexity analysis of filter keystream generators **CDT** p33
High-density 16/8/4-bit configurable multiplier **CDS** p272
New static multi-output carry lookahead CMOS adders **CDS** p350
Numerically stable algorithm for computing Wigner-Ville distribution **VIS** p46
Self-generating clock using an augmented distribution network **CDS** p219

DIGITAL ELECTRONICS

Alternative systolic array for non-square-root Cholesky decomposition **CDT** p57
CMOS switched current phase-locked loop **CDS** p75
Delay time sensitivity analysis of multi-generation BiCMOS digital circuits **CDS** p60
Design and modelling of a high performance differential bipolar self-timed microprocessor **CDT** p371
Differential register bank design for self timed differential bipolar technology **CDS** p297
Digital sinusoidal oscillator with low and uniform frequency spacing **CDS** p185
Electrical systems identification using Golay complementary series **SMT** p267
Estimation of speed, stator temperature and rotor temperature in cage induction motor drive using the extended Kalman filter algorithm **EPA** p301
Full fuzzy control of a DSP-based high performance induction motor drive **CTA** p361
Improved error-table compensation of A/D converters **CDS** p343
Improving the accuracy of the rotor resistance estimate for vector-controlled induction machines **EPA** p285
Logic synthesis of a PLL phase frequency detector **CDT** p381
March U: a test for unlinked memory faults **CDS** p155
Novel architecture for ATM QoS management **COM** p412
On-chip memory module designs for video-signal processing **CDS** p138
Performance-driven macro-block placer for architectural evaluation of ASIC designs **CDS** p190
Piecewise linear approximation applied to nonlinear function of a neural network **CDS** p313
Self-generating clock using an augmented distribution network **CDS** p219
Systolic arrays for the discrete Hilbert transform **CDS** p259
Systolic implementation of higher-order CMAC and its application in colour calibration **CDS** p129
Wired-OR property and improved structure of recovered energy logic (REL) **CDS** p378

DIGITAL FILTERS

Adaptive multiresolution analysis based evoked potential filtering **SMT** p149
Finite wordlength effects in two-dimensional multirate periodically time-varying filters **CDS** p277
High performance asynchronous FIR filter design in GaAs **CDS** p289

DIGITAL TECHNIQUES

Design and modelling of a high performance differential bipolar self-timed microprocessor **CDT** p371

DISCRETE SYSTEMS

Adaptive performance/robust control design for discrete systems **CTA** p95
Discrete-time model reference adaptive control for nonminimum phase systems with disturbances using approximate inverse systems **CTA** p447
Discretisation of continuous-time control systems with guaranteed stability [comment with reply] **CTA** p277
Lattice filters based on the delta operator **VIS** p125
LQ control of sinusoidal current PWM rectifiers **EPA** p95
Neural implementation of GMV control schemes based on affine input/output models **CTA** p521
Quadratic guaranteed cost and disc pole location control for discrete-time uncertain systems **CTA** p545
Robust control of interval plants: a time domain method **CTA** p347
Robust system identification from weighted impulse response data and worst-case error bounds **CTA** p67

DISTRIBUTED PARAMETER SYSTEMS

Adaptive integral control of time-delay systems **CTA** p531
Control-system synthesis for open-loop unstable process with time delay **CTA** p334
Designing stabilising controllers and observers for uncertain linear systems with time-varying delay **CTA** p331
Haar wavelet method for solving lumped and distributed-parameter systems **CTA** p87
Newton's approach to gain-controlled robust pole placement **CTA** p439
Optimal quadratic guaranteed cost control of a class of uncertain time-delay systems **CTA** p183

EARTH SCIENCES

2.5 μm light-emitting diodes in $InAs_{0.36}Sb_{0.20}P_{0.44}$/InAs for HF detection **OPT** p355
Large HF bearing errors for propagation paths contained within the polar cap **MAP** p241
Large HF bearing errors for propagation paths tangential to auroral oval **MAP** p91
Observations of Doppler spreading on HF signals propagating over high latitude paths **MAP** p215
Simulation and analysis of synthetic sidescan sonar images **RSN** p219
Statistical modelling of ocean SAR images **RSN** p348

EDDY CURRENTS

Simple computational model for calculating the unbalanced magnetic pull on a two-pole turbogenerator rotor due to eccentricity **EPA** p263

EDUCATION AND TRAINING

Feasibility study of transient stability analysis for operator training simulators **GTD** p510

ELECTRIC DISCHARGES

AC circuit breakers: pollution flashover performance of various types of interrupter head **GTD** p50
Analysis of sphere-rod gaps under standard lightning and switching impulse voltages **SMT** p11
Classification of partial discharge sources in gas-insulated substations using novel preprocessing strategies **SMT** p17
Nonlinear fillers in electrical insulation **SMT** p127
Spark breakdown of sphere gaps stressed by standard impulse voltages **SMT** p273
Subspecies analysis of partial discharge data from a generator stator conductor **SMT** p287

ELECTRO-OPTICAL DEVICES

Development of wavelength selective shutters for device application for filters and smart windows **CDS** p123
Highly parallel optics in ATM switching networks **OPT** p53
Lossless operation of 4×4 laser diode optical gate switches using Y reflection type branching/combining circuits for large-scale integration **OPT** p61
Micromachined optical tunable filter for long term stability gas sensors **OPT** p350
Parameter monitoring using neural-network-processed chromaticity **SMT** p257
Quasi-TE_{00} single-mode optical waveguides for electro-optical modulation at 1.3 μm using standard SIMOX material **OPT** p83

ELECTROMAGNETIC COMPATIBILITY

Analysis and simulation of a high-speed two-phase AC drive for aerospace applications **EPA** p149

ELECTROMAGNETIC INTERFERENCE

Influence of earth connection on the operation of railway track circuits **EPA** p215

ELECTROMAGNETIC THEORY

Adaptivity of a real-symmetric array by DOA estimation and null steering **RSN** p245
Analysis and simulation of a high-speed two-phase AC drive for aerospace applications **EPA** p149
Analysis of electromagnetic scattering by cylinders with edges using a hybrid moment method **MAP** p235
Analysis of uplink and downlink capacities for two-tier cellular system **COM** p405
Biorthogonal pulse position modulated direct-sequence CDMA for wireless local communications **COM** p40
Block tridiagonal matrix formulation for inhomogeneous penetrable cylinders **MAP** p184
Cellular CDMA overlay situations **COM** p402
Constructing quasi-optimal subfamilies of GMW sequences suitable for CDMA applications **COM** p99
Detecting anisotropic scattering with hidden Markov models **RSN** p81
Determination of dielectric distribution of a two-dimensional anisotropic cylinder with multilayer structure **MAP** p229
Development of the Laycock-Gott occupancy model **COM** p33
Diffraction by a quarterplane of the field from a halfwave dipole **MAP** p191
Dual-reflector system with a spherical main reflector and shaped subreflector for compact range **MAP** p97
Effect of skywave interference on coverage of radiobeacon DGPS stations **RSN** p163
Electromagnetic waves scattering by nonuniform plasma cylinder **MAP** p61
Field measurements study into the potential effects of ISM emissions on cellular radio equipment **SMT** p134
Finite element analysis of scattering using coupled basis functions for elliptical boundaries **MAP** p501
Generalised iterative method for solving 2D multiscattering problems using spectral techniques **MAP** p73
Green function for radiation and propagation in helicoidal bianisotropic mediums **MAP** p57
Green's functions for planar soft and hard surfaces derived by asymptotic boundary conditions **MAP** p321
High frequency spectral occupancy at the solstices **COM** p24
Improved numerical simulation of electromagnetic wave scattering from perfectly conducting random surfaces **MAP** p256
Iterative solutions of MFIE for computing electromagnetic scattering of large open-ended cavities **MAP** p141
Measured and modelled scattering properties of simulated particles of granular and spongy hail at microwave and millimetre-wave frequencies **MAP** p27
Moment-method analysis of circularly symmetric reflectors using bandlimited basis functions **MAP** p179
Performance analysis based on co-channel interference statistics of indoor CDMA systems with RAKE receiver and power control under multipath fading **COM** p173

Prediction of the electromagnetic performance of large ground-based impedance-loaded dielectric space-frame radomes **RSN** p9
Quadrifilar conical helical antenna with travelling-wave current distribution **MAP** p53
Response of underground multiconductor cable systems to external fields illumination [and reply] **SMT** p294
Results from clear-air propagation studies on Franco-UK paths at 1.3 and 11 GHz **MAP** p267
Scattering by a right-angled lossy dielectric wedge **MAP** p392
Simulation of Berenger's perfectly matched layer with a modified TLM node **MAP** p205
Space-time adaptive processing for airborne radar with various array orientations **RSN** p330
Technique for predicting the electromagnetic performance of impedance-loaded dielectric space-frame radome components **RSN** p1
Two-stage nonlinear detector in DS/SSMA communications with impulse noise **COM** p387
Zero-forcing equalisation for space diversity combining in microwave digital radio **COM** p107

ELECTROMAGNETISM

Analysis of electromagnetic scattering by cylinders with edges using a hybrid moment method **MAP** p235
BEM analysis of electric field excited by overhead HV lines erected in built-up areas **SMT** p81
Block tridiagonal matrix formulation for inhomogeneous penetrable cylinders **MAP** p184
Calculation of thermal fields of underground cable systems with consideration of structural steels constructed in a duct bank **GTD** p541
Capacitance and charge distribution of two cylindrical conductors of finite length **SMT** p280
Determination of dielectric distribution of a two-dimensional anisotropic cylinder with multilayer structure **MAP** p229
Development of wavelength selective shutters for device application for filters and smart windows **CDS** p123
Diffraction by a quarterplane of the field from a halfwave dipole **MAP** p191
Dwight-Bewley paradox [comment] **SMT** p53
Dwight-Bewley paradox [comment and reply] **SMT** p54
Eddy current losses and hot-spot evaluation in cover plates of power transformers **EPA** p435
Eddy-current losses of surface-mounted permanent-magnet motors **EPA** p61
Electrostatic image method for the anisotropic half space **SMT** p156
Evaluation of eddy losses due to high current leads in transformers **SMT** p34
Finite element analysis of scattering using coupled basis functions for elliptical boundaries **MAP** p501
General method of magnetising flux saturation modelling in d-q axis models of double-cage induction machines **EPA** p101
Generalised iterative method for solving 2D multiscattering problems using spectral techniques **MAP** p73
Green function for radiation and propagation in helicoidal bianisotropic mediums **MAP** p57
Green's functions for planar soft and hard surfaces derived by asymptotic boundary conditions **MAP** p321
Images in linearly conducting dielectrics **SMT** p163
Improved numerical simulation of electromagnetic wave scattering from perfectly conducting random surfaces **MAP** p256
Iterative solutions of MFIE for computing electromagnetic scattering of large open-ended cavities **MAP** p141
Modelling and identification of iron losses in nonoriented steel laminations using Preisach theory **EPA** p227
Newton-Raphson approach for the analysis of ferroresonant circuits **GTD** p489
Origin, location, magnitude and consequences of recoil in the plasma armature railgun [comment and reply] **SMT** p49
Scattering by a right-angled lossy dielectric wedge **MAP** p392
Simple computational model for calculating the unbalanced magnetic pull on a two-pole turbogenerator rotor due to eccentricity **EPA** p263
Simulation of Berenger's perfectly matched layer with a modified TLM node **MAP** p205

ELECTRON TUBES

Field measurements study into the potential effects of ISM emissions on cellular radio equipment **SMT** p134

ELECTRIC VARIABLES CONTROL

Active power filter with sliding mode control **GTD** p564
Analysis and design of a flyback zero-current switched quasiresonant AC/DC converter **EPA** p401
Analysis and design of a three-level PWM converter system for railway-traction applications **EPA** p357
Analysis of neural and fuzzy-power electronic control **SMT** p25
Analysis of the single-phase four-quadrant PWM converter resulting in steady-state and small-signal dynamic models **EPA** p241
Co-ordination of emergency secondary-voltage control and load shedding to prevent voltage instability **GTD** p293
Distribution system voltage and reactive power control based on probabilistic load flow analysis **GTD** p363
Dynamic modelling of a unified power flow controller **GTD** p7
Engineering of a CDMA radio uplink for a mobile radio demonstration system **COM** p341
Exact analysis of a multipulse shunt converter compensator or Statcon. I. Performance **GTD** p213
High-frequency switching-mode power amplifier for shaker armature excitation **EPA** p415
High performance control of the series-parallel resonant converter **EPA** p131
Implementation of a self-tuning AVR **CTA** p32
Improvement of network damping and transient stability by active and reactive power control **GTD** p125
LQ control of sinusoidal current PWM rectifiers **EPA** p95
Modelling and design of a reversible three-phase switching mode rectifier **EPA** p389
Output feedback TCSC controllers to improve damping of meshed multi-machine power systems **GTD** p243
Performance analysis based on co-channel interference statistics of indoor CDMA systems with RAKE receiver and power control under multipath fading **COM** p173
Power control of a CO_2 laser **CTA** p177
Predictive analogue generator excitation controller **GTD** p271
Quadratic sensitivities for power system steady-state control **GTD** p317
Selection of installing locations and feedback signals of FACTS-based stabilisers in multimachine power systems by reduced-order modal analysis **GTD** p263
Simplified predictive instantaneous current control for single-phase and three-phase voltage-fed PFC converters **EPA** p46
True average current predictive controller for four-wire PWM reversible rectifiers **EPA** p397
Unified power flow controller: a critical comparison of Newton-Raphson UPFC algorithms in power flow studies **GTD** p437
Voltage control by tap-changing transformers for a radial distribution network **GTD** p517

ELECTRONIC CIRCUITS

Calix(8)arene LB superlattices: pyroelectric molecular baskets **CDS** p108
Effects of 'overmakes' on company performance **SMT** p57
Electrical characteristics of a polyaniline/silicon hybrid field-effect transistor gas sensor **CDS** p111
Full-swing BiCMOS Schmitt trigger **CDS** p303
Generalised approach to modelling shielded printed-circuit transmission lines **MAP** p103
Quality investigation of joint of bipolar transistor chip and lead frame by thermal wave method **CDS** p78

ENERGY CONVERSION

Damping torsional oscillations due to network faults using the dynamic flywheel damper **GTD** p495

EPITAXIAL GROWTH

2.5 μm light-emitting diodes in $InAs_{0.36}Sb_{0.20}P_{0.44}$/InAs for HF detection **OPT** p355
Channel waveguides formed by ion implantation of PECVD grown silica **OPT** p97
Comparison of light emission from room temperature light emitting diodes with InAs active regions grown by LPE **OPT** p287
Growth and characterisation of mid-IR $InAs_{0.9}Sb_{0.1}$-InAs strained multiple quantum well light emitting diodes grown on InAs substrates **OPT** p295
High quality AlGaSb, AlGaAsSb and InGaAsSb epitaxial layers grown by liquid-phase epitaxy from Sb-rich melts **OPT** p438
Novel materials and device design by metal-organic chemical vapour deposition for use in IR emitters **OPT** p271
Strained GaInAs quantum well mid-IR emitters **OPT** p360

ERRORS AND ERROR ANALYSIS

Analysis and implementation of an adjustable-rate multilevel coded modulation system **COM** p1
Effect of bandlimiting filters on multidimensional digital communication system in Gaussian noise **COM** p150
Engineering of a CDMA radio uplink for a mobile radio demonstration system **COM** p341
Modified multiple stack algorithm for decoding convolutional codes **COM** p221
Performance analysis based on co-channel interference statistics of indoor CDMA systems with RAKE receiver and power control under multipath fading **COM** p173
Performance analysis of noncoherent DS-CDMA systems in a Nakagami fading channel with arbitrary parameters **COM** p166
Performance improvement of fibre-optic code-division multiple-access systems by using error-correction codes **COM** p316
Performance of binary CPM schemes in frequency selective fading channels with pilot symbol assisted detection **COM** p191

EXPERT SYSTEMS

Application of artificial neural networks to the dynamic analysis of the voltage stability problem **GTD** p371
Artificial intelligence algorithms for short term scheduling of thermal generators and pumped-storage **GTD** p193
Automated parameter extraction for ultrasonic flaw analysis **SMT** p93
Classification of partial discharge sources in gas-insulated substations using novel preprocessing strategies **SMT** p17
Comprehensive algorithm for hydrothermal coordination **GTD** p482
Computer-based strategy for the restoration problem in electric power distribution systems **GTD** p389
Connectionist network for dynamic programming problems **CDT** p163
Expert adaptive control applied to turbogenerator systems **CTA** p2
Fault diagnosis of power transformers: application of fuzzy set theory, expert systems and artificial neural networks **SMT** p39
Fuzzy assessment of power system transient stability level based on steady-state data **GTD** p525
Fuzzy logic approach in power system fault section identification **GTD** p406
Fuzzy rule-based expert system for power system fault diagnosis **GTD** p186
Generalised approach to the recognition of structurally similar handwritten characters using multiple expert classifiers **VIS** p15
Intelligent artefact identification in electroencephalography signal processing **SMT** p193
Intelligent signal processing of evoked potentials for anaesthesia monitoring and control **CTA** p354
Large-scale economic dispatch using an improved Hopfield neural network **GTD** p181
Logic for verifying public-key cryptographic protocols **CDT** p28

FEEDBACK

Cycle-slipping probability of first-order phase-locked loop using transient analysis **COM** p357
Designing stabilising controllers and observers for uncertain linear systems with time-varying delay **CTA** p331
Exact determination of the limit cycles in relay control systems with additional nonlinearities in the feedback loops **CTA** p269
H^∞ control for a sensorless permanent-magnet synchronous drive **EPA** p173
High-frequency switching-mode power amplifier for shaker armature excitation **EPA** p415

Image compression using multilayer neural networks **VIS** p307
Implementation of a self-tuning AVR **CTA** p32
Integrated approach to eigenstructure assignment by output feedback control **CTA** p435
Inversion control of nonlinear systems with neural network modelling **CTA** p481
LQG approach for the high-precision track control of ships **CTA** p121
Model reference adaptive control of dynamic output feedback linearisable systems with unknown high frequency gain **CTA** p427
Nonlinear internal model control using local model networks **CTA** p505
Output feedback sliding mode design for linear uncertain systems **CTA** p209
Output feedback TCSC controllers to improve damping of meshed multi-machine power systems **GTD** p243
Quantitative design of uncertain multivariable control system with an inner-feedback loop **CTA** p195
Realisation of two-degrees-of-freedom compensators **CTA** p589
Robust decentralised design for multiple FACTS damping controllers **GTD** p61
Selection of installing locations and feedback signals of FACTS-based stabilisers in multimachine power systems by reduced-order modal analysis **GTD** p263
Short-term load forecasting for demand side management **GTD** p68

FIBRE LASERS

Electrical filtering strategies to compensate waveform distortion in optically amplified IM/DD systems **OPT** p75

FIBRE OPTICS

Advances in high resolution distributed temperature sensing using the time-correlated single photon counting technique **OPT** p183
Analysis of fibre optic Michelson interferometric sensor distortion caused by the imperfect properties of its 3×3 coupler **OPT** p377
Development of a fibre optic micro-optrode for intracellular pH measurements **OPT** p162
Development of micro-optrodes using sol-gel immobilisation **SMT** p241
Extrinsic Fabry-Perot interferometer vibration and acoustic sensor systems for airport ground traffic monitoring **OPT** p134
Fabrication and coupling-to-fibre characteristics of laser diodes integrated with a spot-size converter having a lateral taper **OPT** p104
Fibre optic spectral polarimetry for sensing multiple stress-loaded locations along a length of fibre **OPT** p176
Fibre-optic voltage sensor using an optical lever **OPT** p253
Local supermode analysis of tapered fibre sensor **OPT** p383
Microwave modelling of optical diffraction grating devices **OPT** p221
Multicomponent time-division-multiplexed optical fibre laser Doppler anemometry **OPT** p168
Optimisation of signal-to-noise ratio in an optical current measurement system using different detection schemes **SMT** p175
Phase demodulation in optical fibre Fabry-Perot sensors with inexact phase steps **OPT** p130
Simultaneous measurement of strain and temperature using the first- and second-order diffraction wavelengths of Bragg gratings **OPT** p156
Simultaneous measurement of temperature and strain using fibre Bragg gratings and Brillouin scattering **OPT** p151
Spiral fibre microbend sensors **OPT** p145
Supermode analysis of fibre transmission **OPT** p411
Theoretical analysis of the modal dispersion induced by stresses in a multimode plastic optical fibre **OPT** p397
Theoretical concepts of a novel Vernier-based fringe-counting fibre optic sensor **OPT** p126

FILTERS AND FILTERING

Active power filter with sliding mode control **GTD** p564
Assessment of active microwave inductors **CDS** p161
Circuit transformation method from OTA-C circuits into CFA-based RC circuits **CDS** p209
Current conveyor based test structures for mixed-signal circuits **CDS** p213
Design considerations and implementation of very low frequency continuous-time CMOS monolithic filters **CDS** p68
Digital algorithms for measurement of voltage flicker **GTD** p175
Effect of minor harmonics on the performance of resonant harmonic filters in distribution systems **EPA** p349
Frequency response of N-port planar gyromagnetic circuits using the mutual energy-finite element method **MAP** p221
Harmonic worst-case identification and filter optimal design of MRT systems using genetic algorithms **EPA** p372
Hierarchical techniques for symbolic analysis of electronic circuits **CDS** p167
Low-pass impedance transformation networks **CDS** p284
Multilayer frequency-selective surfaces for millimetre and submillimetre wave applications **MAP** p415
Noise analysis for high-order active filters **CDS** p11
Noninteracting electronically tunable CCII-based current-mode biquadratic filters **CDS** p178
Noninverting switched-current sample/hold circuit with compensation of the clock-feedthrough effect **CDS** p247
Novel CMOS differential voltage current conveyor and its applications **CDS** p195
Optimised input filter design and low-loss switching techniques for a practical matrix converter **EPA** p53
Synthesis of reflection-mode prototype networks with dissipative circuit elements **MAP** p437
Treatment of two-dimensional E-plane bandstop filters using the finite element method **MAP** p411
Versatile architecture for current-mode biquadratic filters in CMOS technology **CDS** p229

FORMAL LOGIC

Designing a fuzzy step size LMS algorithm **VIS** p261
Fault diagnosis of power transformers: application of fuzzy set theory, expert systems and artificial neural networks **SMT** p39
Generalised hybrid arithmetic canonical expansions for completely specified quaternary functions **CDS** p201
Intelligent signal processing of evoked potentials for anaesthesia monitoring and control **CTA** p354
Matrix method for solving multivalued logic differential equations **CDT** p267
Multilevel logic synthesis technique for efficient verification testing **CDT** p83
Multiobjective fuzzy genetic algorithm optimisation approach to nonlinear control system design **CTA** p137
Multireader and multiwriter asynchronous communication mechanisms **CDT** p241
pH control: handling nonlinearity and deadtime with fuzzy relational model-based control **CTA** p263
Role model analysis of an asynchronous communication mechanism **CDT** p232
Subsea vehicle path planning using nonlinear programming and constructive solid geometry **CTA** p143
Use of learning automata in distributed fuzzy logic processor training **CTA** p255

FUZZY CONTROL

Analysis of neural and fuzzy-power electronic control **SMT** p25
Dynamic systems reliability evaluation using uncertainty techniques for performance monitoring **CTA** p103
Environmental/economic dispatch using fuzzy logic controlled genetic algorithms **GTD** p377
Evaluation of load shedding to prevent dynamic voltage instability based on extended fuzzy reasoning **GTD** p81
Full fuzzy control of a DSP-based high performance induction motor drive **CTA** p361
Implementation of intelligent self-organising controllers in DSP controlled electromechanical drives **CTA** p324
Incremental fuzzy PI control of a solar power plant **CTA** p596
Indirect field-oriented induction motor drive with fuzzy detuning correction and efficiency optimisation controls **EPA** p37
Learning issues in model reference based fuzzy control **CTA** p605
Multiobjective fuzzy genetic algorithm optimisation approach to nonlinear control system design **CTA** p137
Optimal planning technique with a fuzzy co-ordinator for an intelligent robot's part assembly **CTA** p45
pH control: handling nonlinearity and deadtime with fuzzy relational model-based control **CTA** p263
Robust output tracking for MIMO nonlinear systems: an adaptive fuzzy systems approach **CTA** p537
Robust self-tuning rotated fuzzy basis function controller for robot arms **CTA** p293
Sliding mode and fuzzy control of toggle mechanism using PM synchronous servo-motor drive **CTA** p393
Stability analysis of fuzzy multivariable systems: vector Lyapunov function approach **CTA** p403

GENERATORS

Analysis and design of a three-level PWM converter system for railway-traction applications **EPA** p357
Analytical solution to harmonic characteristics of traction PWM converters **EPA** p158
Damping torsional oscillations due to network faults using the dynamic flywheel damper **GTD** p495
Driving circuit for ultrasonic motor servo drive with variable-structure adaptive model-following control **EPA** p199
Eddy-current losses of surface-mounted permanent-magnet motors **EPA** p61
Effect of skew, pole count and slot count on brushless motor radial force, cogging torque and back EMF **EPA** p325
Estimation of speed and armature temperature in a brushed DC drive using the extended Kalman filter **EPA** p13
Generalised theory of the brushless doubly-fed machine. 2. Model verification and performance **EPA** p123
Generalised theory of the brushless doubly-fed machine. I. Analysis **EPA** p111
Implementation of intelligent self-organising controllers in DSP controlled electromechanical drives **CTA** p324
Modelling and identification of iron losses in nonoriented steel laminations using Preisach theory **EPA** p227
Modelling and simulation of the Torus generator **EPA** p446
Predictive analogue generator excitation controller **GTD** p271
Reduction of cogging force in slotless linear permanent magnet motors **EPA** p277
Robust speed control of brushless DC motor using adaptive input-output linearisation technique **EPA** p469
Simple computational model for calculating the unbalanced magnetic pull on a two-pole turbogenerator rotor due to eccentricity **EPA** p263
Sliding mode and fuzzy control of toggle mechanism using PM synchronous servo-motor drive **CTA** p393
Stator resistance voltage-drop compensation for open-loop AC drives **EPA** p21
Subspecies analysis of partial discharge data from a generator stator conductor **SMT** p287

HOLOGRAPHY

Microwave modelling of optical diffraction grating devices **OPT** p221

INDUCTION MOTORS

Analysis and simulation of a high-speed two-phase AC drive for aerospace applications **EPA** p149
Effects of flux level on a CSI-fed field-oriented induction motor **EPA** p295
Electrical characterisation of domestic refrigeration compressors **SMT** p123
Electrical stresses applied to stator insulation in low-voltage induction motors fed by PWM drives **EPA** p191
Estimation of speed, stator temperature and rotor temperature in cage induction motor drive using the extended Kalman filter algorithm **EPA** p301
Full fuzzy control of a DSP-based high performance induction motor drive **CTA** p361
General method of magnetising flux saturation modelling in d-q axis models of double-cage induction machines **EPA** p101
Heating in deep-bar rotor cages **EPA** p271
Implementation of intelligent self-organising controllers in DSP controlled electromechanical drives **CTA** p324
Improving the accuracy of the rotor resistance estimate for vector-controlled induction machines **EPA** p285
Indirect field-oriented induction motor drive with fuzzy detuning correction and efficiency optimisation controls **EPA** p37
Modelling of the coolant flow with heat flow controlled temperature sources in thermal networks [in induction motors] **EPA** p338
Regenerative- and plug-braking operations of inverter-fed asynchronous motors **EPA** p453
State-space modelling and eigenvalue analysis of the slip energy recovery drive **EPA** p27

INFORMATION THEORY

Adaptive control scheme using real time tuning of the parameter estimator **CTA** p241
Adaptive decision fusion for unequiprobable sources **RSN** p105
Adaptive multiresolution analysis based evoked potential filtering **SMT** p149
Bayesian approach to parameter estimation and interpolation of time-varying autoregressive processes using the Gibbs sampler **VIS** p249
Block algorithms for the parametric estimation of signals and systems **VIS** p257
Block momentum-LMS algorithm based on the method of parallel tangents **VIS** p49
Consistent parameter estimation of systems disturbed by correlated noise **CTA** p40
Critique of the paper 'Novel design of arithmetic coding for data compression' **CDT** p394
Data fusion and artificial neural networks for biomass estimation **SMT** p69
Design methodology for the implementation of multidimensional circular convolution **CDS** p324
Designing a fuzzy step size LMS algorithm **VIS** p261
Digital signature with a subliminal channel **CDT** p387
Direct reconstruction method for wavelet transform extrema representation **VIS** p193
Direction-of-arrival and frequency estimations for narrowband sources using two single rotation invariance algorithms with the marked subspace **RSN** p234
Effects of motion on adaptive arrays **RSN** p15
Estimation of autoregressive signals from noisy measurements **VIS** p39
Fast codeword search algorithm for real-time codebook generation in adaptive VQ **VIS** p278
Finite wordlength effects in two-dimensional multirate periodically time-varying filters **CDS** p277
Identification of cubically nonlinear systems using undersampled data **VIS** p267
Intelligent artefact identification in electroencephalography signal processing **SMT** p193
Intelligent signal processing of evoked potentials for anaesthesia monitoring and control **CTA** p354
IQML algorithm for multiple signal parameter estimation **RSN** p237
Lattice filters based on the delta operator **VIS** p125
LQG approach for the high-precision track control of ships **CTA** p121
Model order selection for the singular value decomposition and the discrete Karhunen-Loeve transform using a Bayesian approach **VIS** p116
Modelling 1-D signals using Hermite basis functions **VIS** p345
Nonlinear filters for linear signal models **CTA** p281
Numerically stable algorithm for computing Wigner-Ville distribution **VIS** p46
Parallel pipeline implementation of wavelet transforms **VIS** p355
Performance evaluation of an algorithm for multiple target angle tracking **RSN** p252
Properties and methods of calculating generalised arithmetic and adding transforms **CDS** p249
Real-time identification of missile aerodynamics using a linearised Kalman filter aided by an artificial neural network **CTA** p299
S-class of time-frequency distributions **VIS** p57
Statistical analysis of the eigenvector projection method for adaptive spatial filtering of interference **RSN** p57
Updating the Jacobi SVD for nonstationary data **VIS** p108

INSTRUMENTATION AND MEASUREMENT

2.5 μm light-emitting diodes in $InAs_{0.36}Sb_{0.20}P_{0.44}$/InAs for HF detection **OPT** p355
Advances in high resolution distributed temperature sensing using the time-correlated single photon counting technique **OPT** p183
Analysis of fibre optic Michelson interferometric sensor distortion caused by the imperfect properties of its 3×3 coupler **OPT** p377
Characterisation of radio frequency heating systems in industry using a network analyser **SMT** p215
Comparison of IR LED gas sensors with thermal source products **OPT** p266
Comparison of light emission from room temperature light emitting diodes with InAs active regions grown by LPE **OPT** p287
Development of a fibre optic micro-optrode for intracellular pH measurements **OPT** p162
Development of micro-optrodes using sol-gel immobilisation **SMT** p241
Digital charting: a Royal Navy navigator's view **RSN** p143
Dynamic models of certain DC and low frequency electric field sensors **SMT** p247
Electrical characterisation of domestic refrigeration compressors **SMT** p123
Electrical characteristics of a polyaniline/silicon hybrid field-effect transistor gas sensor **CDS** p111
Extrinsic Fabry-Perot interferometer vibration and acoustic sensor systems for airport ground traffic monitoring **OPT** p134
Fibre optic spectral polarimetry for sensing multiple stress-loaded locations along a length of fibre **OPT** p176
Fibre-optic voltage sensor using an optical lever **OPT** p253
Growth and characterisation of mid-IR $InAs_{0.9}Sb_{0.1}$-InAs strained multiple quantum well light emitting diodes grown on InAs substrates **OPT** p295
Influence of buffer layer and processing on the dark current of 2.5 μm-wavelength 2%-mismatched InGaAs photodetectors **OPT** p277
Local supermode analysis of tapered fibre sensor **OPT** p383
Mercury cadmium telluride staring arrays for mid-IR detection **OPT** p327
Micromachined optical tunable filter for long term stability gas sensors **OPT** p350
Modelling of capacitance tomography sensors **SMT** p203
Multicomponent time-division-multiplexed optical fibre laser Doppler anemometry **OPT** p168
Multilayer frequency-selective surfaces for millimetre and submillimetre wave applications **MAP** p415
Optimisation of bistable quantum well IR phototransistors **OPT** p283
Optimisation of signal-to-noise ratio in an optical current measurement system using different detection schemes **SMT** p175
Parameter monitoring using neural-network-processed chromaticity **SMT** p257
Phase demodulation in optical fibre Fabry-Perot sensors with inexact phase steps **OPT** p130
Simple voltage generator for producing well-defined nanosecond pulses of amplitudes in excess of 1 kV **SMT** p229
Simultaneous measurement of strain and temperature using the first- and second-order diffraction wavelengths of Bragg gratings **OPT** p156
Simultaneous measurement of temperature and strain using fibre Bragg gratings and Brillouin scattering **OPT** p151
Spiral fibre microbend sensors **OPT** p145
Theoretical concepts of a novel Vernier-based fringe-counting fibre optic sensor **OPT** p126
Theory of quantum well IR photodetectors with tunnelling electron injection **OPT** p343

INSULATED GATE FIELD EFFECT TRANSISTORS

Active power filter with sliding mode control **GTD** p564
Electrical characteristics of a polyaniline/silicon hybrid field-effect transistor gas sensor **CDS** p111
Losses in PWM converters using IGBTs: on the effect of bus-clamping on the distortion of the AC-side currents **EPA** p169
Single-phase matrix converter **EPA** p235
Single-phase step-up/down rectifier with improved supply current waveform **EPA** p6
Switching loss minimised space vector PWM method for IGBT three-level inverter **EPA** p182

INSULATORS AND INSULATION

AC circuit breakers: pollution flashover performance of various types of interrupter head **GTD** p50
Earthing effects of coated underground cables with metallic shields bonded to earth electrodes **GTD** p26
Electrical stresses applied to stator insulation in low-voltage induction motors fed by PWM drives **EPA** p191
Nonlinear fillers in electrical insulation **SMT** p127
Online leakage current monitoring of 400 kV insulator strings in polluted areas **GTD** p515
Role of cooling fins in circuit breakers **GTD** p57

INTEGRATED CIRCUITS

Assessing and comparing fault coverage when testing analogue circuits **CDS** p1
Delay time sensitivity analysis of multi-generation BiCMOS digital circuits **CDS** p60
Design and evaluation of a novel enhancement mode FET logic gate configuration in AlGaAs/GaAs/AlGaAs quantum well HEMT technology **CDS** p243
Design and modelling of a high performance differential bipolar self-timed microprocessor **CDT** p371
Diagnosis of multifaults in analogue circuits using multilayer perceptrons **CDS** p149
Differential register bank design for self timed differential bipolar technology **CDS** p297
Dual basis systolic multipliers for $GF(2^m)$ **CDT** p43
Full-swing BiCMOS Schmitt trigger **CDS** p303
High performance asynchronous FIR filter design in GaAs **CDS** p289
IC compatible planar inductors on silicon **CDS** p29
Improved control signal distribution for very wide VLSI data buses **CDT** p209
Improved single-ended solutions for ultrawide-band monolithic GaAs amplifiers **MAP** p458
Integrated-circuit antenna for high-permittivity substrates **MAP** p47
March U: a test for unlinked memory faults **CDS** p155
Modelling the BiCMOS switching delay including radiation effects **CDS** p53
Optimal fault-tolerant design approach for VLSI array processors **CDT** p15
Optimum partitioning problem for rectilinear VLSI layout **CDT** p155
Parallel logic simulation with assignable delays on a vector multiprocessor computer **CDS** p5
Parallel sparse-matrix solution for direct circuit simulation on a transputer array **CDS** p335
Performance-driven macro-block placer for architectural evaluation of ASIC designs **CDS** p190
Self-generating clock using an augmented distribution network **CDS** p219
Theory and performance of parabolic true logarithmic amplifier **CDS** p223
Total TCAD strategy for DFM in IC technology development **SMT** p63

INTEGRATED OPTICS

Channel waveguides formed by ion implantation of PECVD grown silica **OPT** p97
Nonperturbative calculation of bend loss for a pulse in a bent planar waveguide **OPT** p91
Quasi-TE_{00} single-mode optical waveguides for electro-optical modulation at 1.3 μm using standard SIMOX material **OPT** p83
Reduced-power semiconductor all-optical switch design **OPT** p2
Threshold and above-threshold analysis of corrugation-pitch-modulated DFB lasers with inhomogeneous coupling coefficient **OPT** p365
Use of multiple-wavelength and/or TE/TM effective-refractive-index measurements to reconstruct refractive-index profiles **OPT** p213
Weighted-index beam-propagation method for analysis of three-dimensional optical structures **OPT** p197

INTEGRATED OPTOELECTRONICS

Fabrication and coupling-to-fibre characteristics of laser diodes integrated with a spot-size converter having a lateral taper **OPT** p104
Highly parallel optics in ATM switching networks **OPT** p53

INTERFERENCE SUPPRESSION

Adaptivity of a real-symmetric array by DOA estimation and null steering **RSN** p245
Analysis and simulation of a high-speed two-phase AC drive for aerospace applications **EPA** p149
Analysis of uplink and downlink capacities for two-tier cellular system **COM** p405
Biorthogonal pulse position modulated direct-sequence CDMA for wireless local communications **COM** p40
Cellular CDMA overlay situations **COM** p402
Constructing quasi-optimal subfamilies of GMW sequences suitable for CDMA applications **COM** p99
Development of the Laycock-Gott occupancy model **COM** p33
Dual-reflector system with a spherical main reflector and shaped subreflector for compact range **MAP** p97
Effect of skywave interference on coverage of radiobeacon DGPS stations **RSN** p163
Field measurements study into the potential effects of ISM emissions on cellular radio equipment **SMT** p134
High frequency spectral occupancy at the solstices **COM** p24
Performance analysis based on co-channel interference statistics of indoor CDMA systems with RAKE receiver and power control under multipath fading **COM** p173

Results from clear-air propagation studies on Franco-UK paths at 1.3 and 11 GHz **MAP** p267
Space-time adaptive processing for airborne radar with various array orientations **RSN** p330
Two-stage nonlinear detector in DS/SSMA communications with impulse noise **COM** p387
Zero-forcing equalisation for space diversity combining in microwave digital radio **COM** p107

LASER MODES

Carrier density depinning above threshold in semiconductor lasers: effects of carrier heating and spectral hole burning **OPT** p209
Continuously distributed phase shifts by chirped distributed-feedback gratings for 1.55 μm distributed-feedback lasers **OPT** p256
Effect of optical feedback on fast modulated semiconductor lasers **OPT** p30
Injection-locking properties of self pulsation in semiconductor lasers **OPT** p228
Stimulated IR emission by quantum magnetoelectric photoeffect of narrow-gap semiconductors **OPT** p305
Threshold and above-threshold analysis of corrugation-pitch-modulated DFB lasers with inhomogeneous coupling coefficient **OPT** p365

LASER THEORY

Threshold and above-threshold analysis of corrugation-pitch-modulated DFB lasers with inhomogeneous coupling coefficient **OPT** p365

LASERS

Analysis of vertical and in-plane spontaneous emission in large diameter VCSELs **OPT** p39
Carrier diffusion inside active regions of gain-guided vertical-cavity surface-emitting lasers **OPT** p421
Effect of optical feedback on fast modulated semiconductor lasers **OPT** p30
Effect of optical feedback on the noise properties of vertical cavity surface emitting lasers **OPT** p34
High-frequency phase measurement for optical rangefinding system **SMT** p141
Influence of laser parameters and unpumped regions near the facets on the power level for catastrophic optical damage in short wavelength lasers **OPT** p109
Multicomponent time-division-multiplexed optical fibre laser Doppler anemometry **OPT** p168
Multiple output semiconductor ring lasers with high external quantum efficiency **OPT** p19
Nearly perfect output power saturation of the semiconductor Raman laser **OPT** p87
Novel materials and device design by metal-organic chemical vapour deposition for use in IR emitters **OPT** p271
Picosecond free-electron laser studies of Auger recombination in arsenic-rich $InAs_{1-x}Sb_x$ strained layer superlattices at 300 K **OPT** p331
Power control of a CO_2 laser **CTA** p177
Propagation and imaging of two orthogonally polarised optical beams in a nonlinear graded-index rod lens **OPT** p115
Self-consistent simulation of (AlGa)InP/GaInP visible lasers **OPT** p23
Theoretical concepts of a novel Vernier-based fringe-counting fibre optic sensor **OPT** p126

LINEAR NETWORK ANALYSIS

Circuit properties of coils **SMT** p234
Exact analysis of a multipulse shunt convertor compensator or Statcon. II. Analysis **GTD** p219
Hierarchical techniques for symbolic analysis of electronic circuits **CDS** p167
Indirect boundary integral equation method as applied for wave propagation in the stator winding of an electric machine **SMT** p223
Low-pass impedance transformation networks **CDS** p284

LOGIC AND SWITCHING CIRCUITS

Design and evaluation of a novel enhancement mode FET logic gate configuration in AlGaAs/GaAs/AlGaAs quantum well HEMT technology **CDS** p243
Design of heuristic algorithms based on Shannon expansion for low-power logic circuit synthesis **CDS** p355
Differential register bank design for self timed differential bipolar technology **CDS** p297
Dual basis systolic multipliers for GF(2^m) **CDT** p43
Generalised hybrid arithmetic canonical expansions for completely specified quaternary functions **CDS** p201
Generic systolic array for genetic algorithms **CDT** p107
GRASS: an efficient gate re-assignment algorithm for inverter minimisation in post technology mapping **CDT** p348
High-density 16/8/4-bit configurable multiplier **CDS** p272
High performance asynchronous FIR filter design in GaAs **CDS** p289
Knowledge based automatic simulation model generation system **CDS** p88
Logic models for continuous time **CDT** p353
Logic synthesis of a PLL phase frequency detector **CDT** p381
Low test-application time method for EEPLA testing **CDT** p39
Multilevel logic synthesis technique for efficient verification testing **CDT** p83
New static multi-output carry lookahead CMOS adders **CDS** p350
Optimal fault-tolerant design approach for VLSI array processors **CDT** p15
Parallel logic simulation with assignable delays on a vector multiprocessor computer **CDS** p5
Planar constrained terminals over-the-cell router **CDT** p121
Predicting the complexity of large combinational circuits through symbolic spectral analysis of their functional specifications **CDT** p343
Simulator for path-delay faults on mixed-level circuits **CDS** p236
Testability aspects of folded source-coupled logic **CDS** p361
Wired-OR property and improved structure of recovered energy logic (REL) **CDS** p378

LOGIC DESIGN

Design of heuristic algorithms based on Shannon expansion for low-power logic circuit synthesis **CDS** p355
DOORS: an object-oriented CAD system for high level synthesis **CDT** p331
Dual basis systolic multipliers for GF(2^m) **CDT** p43
Efficient scheduling of behavioural descriptions in high-level synthesis **CDT** p75
Generalised hybrid arithmetic canonical expansions for completely specified quaternary functions **CDS** p201
Generic systolic array for genetic algorithms **CDT** p107
GRASS: an efficient gate re-assignment algorithm for inverter minimisation in post technology mapping **CDT** p348
Hardware/software partitioning of embedded systems with multiple hardware processes **CDT** p285
High performance asynchronous FIR filter design in GaAs **CDS** p289
Knowledge based automatic simulation model generation system **CDS** p88
Logic models for continuous time **CDT** p353
Logic synthesis of a PLL phase frequency detector **CDT** p381
Low test-application time method for EEPLA testing **CDT** p39
Matrix method for solving multivalued logic differential equations **CDT** p267
Multilevel logic synthesis technique for efficient verification testing **CDT** p83
Optimal fault-tolerant design approach for VLSI array processors **CDT** p15
Overview of decision diagrams **CDT** p187
Parallel logic simulation with assignable delays on a vector multiprocessor computer **CDS** p5
Performance-driven macro-block placer for architectural evaluation of ASIC designs **CDS** p190
Predicting the complexity of large combinational circuits through symbolic spectral analysis of their functional specifications **CDT** p343
Simulator for path-delay faults on mixed-level circuits **CDS** p236
Testability aspects of folded source-coupled logic **CDS** p361
Variable ordering for ordered binary decision diagrams by a divide-and-conquer approach **CDT** p261
VHDL generation from hierarchical Petri net specifications of parallel controllers **CDT** p127
Wired-OR property and improved structure of recovered energy logic (REL) **CDS** p378

MAGNETIC MATERIALS AND DEVICES

Accurate and efficient evaluation of Green's functions for multilayer normally biased ferrite structures **MAP** p403
Analysis and simulation of a high-speed two-phase AC drive for aerospace applications **EPA** p149
Calculation of phase and attenuation constants for waveguides loaded with lossy ferrite with longitudinal or transverse magnetisation **MAP** p111
Computer model for analysing digital magnetic recording systems **COM** p289
Field evaluation for electromagnetic torque components **EPA** p85
Theoretical study of microstrip disc ferrite resonator with impedance boundary conditions **MAP** p297

MATERIALS AND MATERIALS TESTING

Automated parameter extraction for ultrasonic flaw analysis **SMT** p93
Improved differential averaging technique for comparison decrement method **MAP** p377
Wraparound patch resonators on a composite ground plane **MAP** p301

MATHEMATICAL TECHNIQUES

Adaptation of hidden Markov model for telephone speech recognition and speaker adaptation **VIS** p129
Adaptive control scheme using real time tuning of the parameter estimator **CTA** p241
Adaptive decision fusion for unequiprobable sources **RSN** p105
Adaptive performance/robust control design for discrete systems **CTA** p95
Advanced engineered-conditioning genetic approach to power economic dispatch **GTD** p285
Analysis of electromagnetic scattering by cylinders with edges using a hybrid moment method **MAP** p235
Analysis of very fast transient overvoltage in transformer winding **GTD** p461
Analytical solution to harmonic characteristics of traction PWM converters **EPA** p158
Application of mathematical programming to the fixed channel assignment problem in mobile radio networks **COM** p257
Asymptotic properties of queuing networks **CDT** p249
Bayesian approach to parameter estimation and interpolation of time-varying autoregressive processes using the Gibbs sampler **VIS** p249
BCJR trellis construction for binary linear block codes **COM** p367
Bit-serial multiplication in GF(2^m) using irreducible all-one polynomials **CDT** p391
Block algorithms for the parametric estimation of signals and systems **VIS** p257
Block tridiagonal matrix formulation for inhomogeneous penetrable cylinders **MAP** p184
Capacitance and charge distribution of two cylindrical conductors of finite length **SMT** p280
Capacitor placement in distribution systems using heuristic search strategies **GTD** p225
Case study comparison of robust linear quadratic design and mixed-sensitivity H∞ control **CTA** p476
Comprehensive algorithm for hydrothermal coordination **GTD** p482
Computationally efficient analysis of buried waveguides with applications to semiconductor lasers **OPT** p14
Connectionist network for dynamic programming problems **CDT** p163
Consistent symmetric axis method for robust detection of ellipses **VIS** p332
Constrained cautious stable predictive control **CTA** p313
Constrained time-efficient and smooth cubic spline trajectory generation for industrial robots **CTA** p467
Continuously distributed phase shifts by chirped distributed-feedback gratings for 1.55 μm distributed-feedback lasers **OPT** p256
Decomposition approach to unit commitment with reactive constraints **GTD** p113
Design methodology for the implementation of multidimensional circular convolution **CDS** p324
Design of robust observation schemes for uncertain large scale systems **CTA** p369
Determination of dielectric distribution of a two-dimensional anisotropic cylinder with multilayer structure **MAP** p229
Development of constrained-genetic-algorithm load-flow method **GTD** p91
Diffraction by a quarterplane of the field from a halfwave dipole **MAP** p191
Direct reconstruction method for wavelet transform extrema representation **VIS** p193
Discrete-time model reference adaptive control for nonminimum phase systems with disturbances using approximate inverse systems **CTA** p447
Distribution network reconfiguration for loss reduction using fuzzy controlled evolutionary programming **GTD** p345

Distribution system voltage and reactive power control based on probabilistic load flow analysis **GTD** p363
Dynamic models of certain DC and low frequency electric field sensors **SMT** p247
Dynamic system for solving complex eigenvalue problems **CTA** p455
Dynamic systems reliability evaluation using uncertainty techniques for performance monitoring **CTA** p103
Effect of initial conditions on chaotic ferroresonance in power transformers **GTD** p456
Electromagnetic modelling and simulation of multiconductor interconnect networks with inhomogeneous cylindrical substrate **MAP** p347
Electromagnetic waves scattering by nonuniform plasma cylinder **MAP** p61
Electrostatic image method for the anisotropic half space **SMT** p156
Environmental/economic dispatch using fuzzy logic controlled genetic algorithms **GTD** p377
Estimation of autoregressive signals from noisy measurements **VIS** p39
Exact analysis of a multipulse shunt convertor compensator or Statcon. II. Analysis **GTD** p219
Exact determination of the limit cycles in relay control systems with additional non-linearities in the feedback loops **CTA** p269
Extracting the cliques from a neighbourhood system **VIS** p168
Fast codeword search algorithm for real-time codebook generation in adaptive VQ **VIS** p278
Fault diagnosis of power transformers: application of fuzzy set theory, expert systems and artificial neural networks **SMT** p39
Ferroresonance in electromagnetic voltage transformers: a study based on nonlinear dynamics **GTD** p383
Finding all DC solutions of nonlinear resistive circuits by exploring both polyhedral and rectangular circuits **CDS** p17
Finite element analysis of scattering using coupled basis functions for elliptical boundaries **MAP** p501
Fuzzy assessment of power system transient stability level based on steady-state data **GTD** p525
Fuzzy optimisation of capacitors in distribution systems **GTD** p415
Fuzzy rule-based expert system for power system fault diagnosis **GTD** p186
Generalised hybrid arithmetic canonical expansions for completely specified quaternary functions **CDS** p201
Generalised iterative method for solving 2D multiscattering problems using spectral techniques **MAP** p73
Generic systolic array for genetic algorithms **CDT** p107
Givens rotation based fast backward elimination algorithm for RBF neural network pruning **CTA** p381
GRASS: an efficient gate re-assignment algorithm for inverter minimisation in post technology mapping **CDT** p348
Green function for radiation and propagation in helicoidal bianisotropic mediums **MAP** p57
Green's functions for planar soft and hard surfaces derived by asymptotic boundary conditions **MAP** p321
Haar wavelet method for solving lumped and distributed-parameter systems **CTA** p87
Harmonic worst-case identification and filter optimal design of MRT systems using genetic algorithms **EPA** p372
High power GTO thyristor chopper applications with passive snubber energy recovery **EPA** p381
Identification of cubically nonlinear systems using undersampled data **VIS** p267
Illuminant-tilt estimation from images of isotropic texture **VIS** p213
Improved differential averaging technique for comparison decrement method **MAP** p377
Improved numerical simulation of electromagnetic wave scattering from perfectly conducting random surfaces **MAP** p256
Influence of laser parameters and unpumped regions near the facets on the power level for catastrophic optical damage in short wavelength lasers **OPT** p109
Integrated approach to eigenstructure assignment by output feedback control **CTA** p435
Intelligent signal processing of evoked potentials for anaesthesia monitoring and control **CTA** p354
Inversion control of nonlinear systems with neural network modelling **CTA** p481
Iterative solutions of MFIE for computing electromagnetic scattering of large open-ended cavities **MAP** p141
Large-scale economic dispatch using an improved Hopfield neural network **GTD** p181
Linear indicator for voltage collapse in power systems **GTD** p139
Mathematical models of a three-level advanced static VAr compensator **GTD** p201
Matrix method for solving multivalued logic differential equations **CDT** p267
Maximum a posteriori spatial probability segmentation **VIS** p161
Minimising rotor losses in high-speed high-power permanent magnet synchronous generators with rectifier load **EPA** p331
Model order selection for the singular value decomposition and the discrete Karhunen-Loeve transform using a Bayesian approach **VIS** p116
Modelling 1-D signals using Hermite basis functions **VIS** p345
Modelling and identification of iron losses in nonoriented steel laminations using Preisach theory **EPA** p227
Modelling and numerical solution of multibranched DC rail traction power systems [comment and reply] **EPA** p74
Modulation bandwidth optimisation for unipolar intersubband semiconductor lasers **OPT** p44
Multiobjective fuzzy genetic algorithm optimisation approach to nonlinear control system design **CTA** p137
Multiobjective neural network for image reconstruction **VIS** p233
Multiple local Laguerre models for modelling nonlinear dynamic systems of the Wiener class **CTA** p375
Multistage trellis coded quantisation (MS-TCQ) design and performance **COM** p61
Mutual impedance of two probes located in two different waveguide regions separated by a homogeneous dielectric slab: fullwave analysis **MAP** p329
New dynamic, branch exchange method for optimal distribution system planning **GTD** p333
New results on the resistance of an n-cube **CDS** p51
Newton-Raphson approach for the analysis of ferroresonant circuits **GTD** p489
Newton's approach to gain-controlled robust pole placement **CTA** p439
Nonlinear internal model control using local model networks **CTA** p505
Novel image compression method using edge-oriented classifier and novel predictive noiseless coding method **VIS** p361
Numerically stable algorithm for computing Wigner-Ville distribution **VIS** p46
Optimal observers for disturbance rejection in two-degree-of-freedom LQI servo systems **CTA** p575
Optimal planning technique with a fuzzy co-ordinator for an intelligent robot's part assembly **CTA** p45
Optimal traffic control at railway junctions **EPA** p140
Optimisation of bistable quantum well IR phototransistors **OPT** p283
Optimised input filter design and low-loss switching techniques for a practical matrix converter **EPA** p53
Optimising train movements through coast control using genetic algorithms **EPA** p65
Output feedback TCSC controllers to improve damping of meshed multi-machine power systems **GTD** p243
Parallel pipeline implementation of wavelet transforms **VIS** p355
Parallel sparse-matrix solution for direct circuit simulation on a transputer array **CDS** p335
Parametric harmonic analysis [of power systems] **GTD** p21
Performance analysis based on co-channel interference statistics of indoor CDMA systems with RAKE receiver and power control under multipath fading **COM** p173
Planar constrained terminals over-the-cell router **CDT** p121
Pollaczek-Khinchin formula for the M/G/1 queue in discrete time with vacations **CDT** p222
Power systems fault diagnosis using Petri nets **GTD** p231
Probabilistic approach for fault-section estimation in power systems based on a refined genetic algorithm **GTD** p160
Properties and methods of calculating generalised arithmetic and adding transforms **CDS** p249
Quadratic guaranteed cost and disc pole location control for discrete-time uncertain systems **CTA** p545
Realisation of two-degrees-of-freedom compensators **CTA** p589
Recursive identification of certain structured time-varying state-space models **CTA** p489
Reduced-power semiconductor all-optical switch design **OPT** p2
Robust rotation-invariant texture classification: wavelet, Gabor filter and GMRF based schemes **VIS** p180
S-class of time-frequency distributions **VIS** p57
Scattering by a right-angled lossy dielectric wedge **MAP** p392
Searching for TCM codes using genetic algorithms **COM** p6
Selection of installing locations and feedback signals of FACTS-based stabilisers in multimachine power systems by reduced-order modal analysis **GTD** p263
Short-term generation scheduling of thermal units with voltage security and environmental constraints **GTD** p469
Short-term load forecasting using threshold autoregressive models **GTD** p477
Short-term power purchases considering uncertain prices **GTD** p423
Similarity measure for superquadrics **VIS** p237
Simple model of a transport/diffusion system **CTA** p459
Simulated annealing for multiobjective control system design **CTA** p582
Simulation and analysis of synthetic sidescan sonar images **RSN** p219
Simulation of Berenger's perfectly matched layer with a modified TLM node **MAP** p205
Simultaneous stabilisation of power systems using genetic algorithms **GTD** p39
Software library for analysing M/G/1-type systems and its application in computer network performance evaluation **COM** p237
Spiral fibre microbend sensors **OPT** p145
Stability analysis of fuzzy multivariable systems: vector Lyapunov function approach **CTA** p403
Stability of multichannel sound control systems **VIS** p1
Statistical analysis of the eigenvector projection method for adaptive spatial filtering of interference **RSN** p57
Sub-pixel non-parametric PSF estimation for image enhancement **VIS** p285
Subsea vehicle path planning using nonlinear programming and constructive solid geometry **CTA** p143
Subsyllable-based discriminative segmental Bayesian network for Mandarin speech keyword spotting **VIS** p65
Surrogate worth trade-off technique for multi-objective optimal power flows **GTD** p547
Tabu search approach to alarm processing in power systems **GTD** p31
Time-domain modelling of power transformers using modal analysis **EPA** p77
Total TCAD strategy for DFM in IC technology development **SMT** p63
Transcoding of single-layer MPEG video into lower rates **VIS** p377
Unified PID design method based on a maximum peak resonance specification **CTA** p566
VHDL generation from hierarchical Petri net specifications of parallel controllers **CDT** p127
Wavelet transforms on vector spaces as a method of multispectral image characterisation **VIS** p89

MEASUREMENT OF SPECIFIC VARIABLES

2.5 μm light-emitting diodes in $InAs_{0.36}Sb_{0.20}P_{0.44}$/InAs for HF detection **OPT** p355
Advances in high resolution distributed temperature sensing using the time-correlated single photon counting technique **OPT** p183
Analysis of sphere-rod gaps under standard lightning and switching impulse voltages **SMT** p11
Channel waveguides formed by ion implantation of PECVD grown silica **OPT** p97
Comment on "Advances in aircraft-height estimation using distance-measuring equipment" [and reply] **RSN** p235
Comments on "Systematic errors in ground referenced geometric height monitoring" **RSN** p377
Comparison of IR LED gas sensors with thermal source products **OPT** p266
Comparison of light emission from room temperature light emitting diodes with InAs active regions grown by LPE **OPT** p287
Determining the polarisation properties of an antenna using arbitrary and unknown field probes **MAP** p431
Development of a fibre optic micro-optrode for intracellular pH measurements **OPT** p162
Development of micro-optrodes using sol-gel immobilisation **SMT** p241
Digital algorithms for measurement of voltage flicker **GTD** p175
Dynamic models of certain DC and low frequency electric field sensors **SMT** p247
Efficient technique to fix GPS carrier phase integer ambiguity on-the-fly **RSN** p148
Electrical characteristics of a polyaniline/silicon hybrid field-effect transistor gas sensor **CDS** p111
Experimental and simulation studies of the coaxially fed U-slot rectangular patch antenna **MAP** p354
Extrinsic Fabry-Perot interferometer vibration and acoustic sensor systems for airport ground traffic monitoring **OPT** p134
Fibre optic spectral polarimetry for sensing multiple stress-loaded locations along a length of fibre **OPT** p176
Fibre-optic voltage sensor using an optical lever **OPT** p253
Growth and characterisation of mid-IR $InAs_{0.9}Sb_{0.1}$-InAs strained multiple quantum well light emitting diodes grown on InAs substrates **OPT** p295
High-frequency phase measurement for optical rangefinding system **SMT** p141
Instrumental delay calibration with zero baseline interferometry for VLBI time comparison **SMT** p181
Measurement of the magnetic field in the near-field region and self-inductance in free space due to a multiturn square-loop **SMT** p252
Micromachined optical tunable filter for long term stability gas sensors **OPT** p350

Microwave intercept receiver sensitivity estimation **RSN** p186
Modelling of capacitance tomography sensors **SMT** p203
Multicomponent time-division-multiplexed optical fibre laser Doppler anemometry **OPT** p168
Online leakage current monitoring of 400 kV insulator strings in polluted areas **GTD** p515
Optimisation of signal-to-noise ratio in an optical current measurement system using different detection schemes **SMT** p175
Parameter monitoring using neural-network-processed chromaticity **SMT** p257
Simple model of a transport/diffusion system **CTA** p459
Simultaneous measurement of strain and temperature using the first- and second-order diffraction wavelengths of Bragg gratings **OPT** p156
Simultaneous measurement of temperature and strain using fibre Bragg gratings and Brillouin scattering **OPT** p151
Simultaneous signals in IFM receivers **RSN** p181
Spark breakdown of sphere gaps stressed by standard impulse voltages **SMT** p273
Spiral fibre microbend sensors **OPT** p145
Use of multiple-wavelength and/or TE/TM effective-refractive-index measurements to reconstruct refractive-index profiles **OPT** p213

MEASUREMENT SCIENCE

Analysis of sphere-rod gaps under standard lightning and switching impulse voltages **SMT** p11
Comments on "Systematic errors in ground referenced geometric height monitoring" **RSN** p377
Comparison of IR LED gas sensors with thermal source products **OPT** p266
Determining the polarisation properties of an antenna using arbitrary and unknown field probes **MAP** p431
Instrumental delay calibration with zero baseline interferometry for VLBI time comparison **SMT** p181
Micromachined optical tunable filter for long term stability gas sensors **OPT** p350
Phase demodulation in optical fibre Fabry-Perot sensors with inexact phase steps **OPT** p130
Simultaneous measurement of strain and temperature using the first- and second-order diffraction wavelengths of Bragg gratings **OPT** p156
Spark breakdown of sphere gaps stressed by standard impulse voltages **SMT** p273
UHF couplers for gas-insulated substations: a calibration technique **SMT** p117

MICROMECHANICAL DEVICE TECHNOLOGY

Micromachined optical tunable filter for long term stability gas sensors **OPT** p350

MICROWAVE CIRCUITS

Design considerations for the series-connected single-switch phase shifter **MAP** p467
Electromagnetic investigation on the propagation in distributed active devices **MAP** p281
IC compatible planar inductors on silicon **CDS** p29
Improved single-ended solutions for ultrawide-band monolithic GaAs amplifiers **MAP** p458
Integrated-circuit antenna for high-permittivity substrates **MAP** p47
Space charge induced variation in silicon double drift IMPATT diode parameters **CDS** p36
Thermal design of gallium arsenide MESFETs for microwave power amplifiers **CDS** p45

MICROWAVE MEASUREMENT TECHNIQUES

Microwave modelling of optical diffraction grating devices **OPT** p221
Novel high range resolution approach in microwave imaging **RSN** p177
UHF couplers for gas-insulated substations: a calibration technique **SMT** p117

MILITARY SYSTEMS

Microwave intercept receiver sensitivity estimation **RSN** p186
Robust control methodology applied to the design of a combined steering/stabiliser system for warships **CTA** p128

MODULATION

Biorthogonal pulse position modulated direct-sequence CDMA for wireless local communications **COM** p40
Carrier density depinning above threshold in semiconductor lasers: effects of carrier heating and spectral hole burning **OPT** p209
Continuously distributed phase shifts by chirped distributed-feedback gratings for 1.55 μm distributed-feedback lasers **OPT** p256
Distortion effects of multicarrier envelope limiting **COM** p349
Effect of optical feedback on fast modulated semiconductor lasers **OPT** p30
Electrical filtering strategies to compensate waveform distortion in optically amplified IM/DD systems **OPT** p75
Error performance of circular 16-DAPSK with postdetection diversity reception in Rayleigh fading channels **COM** p180
Full fuzzy control of a DSP-based high performance induction motor drive **CTA** p361
Low-decoding-complexity TDM coded modulation with unequal error protection **COM** p372
Optimisation of signal-to-noise ratio in an optical current measurement system using different detection schemes **SMT** p175
Performance of binary CPM schemes in frequency selective fading channels with pilot symbol assisted detection **COM** p191
Phase demodulation in optical fibre Fabry-Perot sensors with inexact phase steps **OPT** p130
Quasi-TE_{00} single-mode optical waveguides for electro-optical modulation at 1.3 μm using standard SIMOX material **OPT** p83
Signal detection over Rayleigh-fading channels with non-Gaussian noise **COM** p381
Two subspace-based methods for frequency estimation of sinusoidal signals with random amplitude **RSN** p169
Zero-forcing equalisation for space diversity combining in microwave digital radio **COM** p107

MODULATORS AND DEMODULATORS

CMOS switched current phase-locked loop **CDS** p75
GaAs MESFET large-signal modelling for multiport Volterra series analysis **CDS** p40
Logic synthesis of a PLL phase frequency detector **CDT** p381

MULTIMEDIA

Modelling multimedia traffic over ATM using MMBP **COM** p307
Performance analysis of FDDI LANs using numerical methods **CDT** p149

MULTIPROCESSOR SYSTEMS

Design and application of Parsim–a message-passing computer simulator **CDT** p7
Parallel logic simulation with assignable delays on a vector multiprocessor computer **CDS** p5
Predictable distributed dynamic scheduling in RTDOS **CDT** p195
Stochastic model of a cache-coherency overhead in SCI rings **CDT** p175
Task tree scheduling onto linear arrays using tabu search **CDT** p317

MULTIVARIABLE CONTROL SYSTEMS

Active power filter with sliding mode control **GTD** p564
Analysis of the single-phase four-quadrant PWM converter resulting in steady-state and small-signal dynamic models **EPA** p241
Case study comparison of robust linear quadratic design and mixed-sensitivity H control **CTA** p476
Comparison of SISO and SIMO neural control strategies for ship track keeping **CTA** p153
Damping of multimodal oscillations in power systems using variable structure control techniques **GTD** p323
Design of robust observation schemes for uncertain large scale systems **CTA** p369
Driving circuit for ultrasonic motor servo drive with variable-structure adaptive model-following control **EPA** p199
Fourier series neural network-based adaptive variable structure control for servo systems with friction **CTA** p559
Improved algorithm for multivariable stable generalised predictive control **CTA** p309
Integrated approach to eigenstructure assignment by output feedback control **CTA** p435
LQ control of sinusoidal current PWM rectifiers **EPA** p95
Output feedback sliding mode design for linear uncertain systems **CTA** p209
Quantitative design of uncertain multivariable control system with an inner-feedback loop **CTA** p195
Robust decentralised design for multiple FACTS damping controllers **GTD** p61
Robust output tracking for MIMO nonlinear systems: an adaptive fuzzy systems approach **CTA** p537
Robust PM synchronous motor servo drive with variable-structure model-output-following control **EPA** p317
Sliding mode and fuzzy control of toggle mechanism using PM synchronous servomotor drive **CTA** p393
Stability analysis of fuzzy multivariable systems: vector Lyapunov function approach **CTA** p403
Variable structure adaptive control of robot manipulators **CTA** p167

NETWORK ANALYSIS

3.3 V mixed-mode IC design using switched-current techniques for speech applications **CDS** p367
Noninverting switched-current sample/hold circuit with compensation of the clock-feedthrough effect **CDS** p247

NEURAL NETS

Access flow control scheme for ATM networks using neural-network-based traffic prediction **COM** p295
Analysis of neural and fuzzy-power electronic control **SMT** p25
Application of artificial neural networks to the dynamic analysis of the voltage stability problem **GTD** p371
Automated parameter extraction for ultrasonic flaw analysis **SMT** p93
Binary encoded 2nd-differential spectrometry using UV-Vis spectral data and neural networks in the estimation of species type and concentration **SMT** p73
Classification of partial discharge sources in gas-insulated substations using novel preprocessing strategies **SMT** p17
CMOS analogue neurone circuit with programmable activation functions utilising MOS transistors with optimised process/device parameters **CDS** p318
Collective process circuit that sorts **CDS** p145
Comparison of SISO and SIMO neural control strategies for ship track keeping **CTA** p153
Connectionist network for dynamic programming problems **CDT** p163
Data fusion and artificial neural networks for biomass estimation **SMT** p69
Data visualisation and identification of anomalies in power system state estimation using artificial neural networks **GTD** p445
Detection of human faces in colour images **VIS** p384
Diagnosis of multifaults in analogue circuits using multilayer perceptrons **CDS** p149
Dynamic system for solving complex eigenvalue problems **CTA** p455
Extraction of independent signal sources using a deflationary exploratory projection pursuit network with lateral inhibition **VIS** p299
Fault diagnosis of power transformers: application of fuzzy set theory, expert systems and artificial neural networks **SMT** p39
Field studies using a neural-net-based approach for fault diagnosis in distribution networks **GTD** p429
Fourier series neural network-based adaptive variable structure control for servo systems with friction **CTA** p559
Givens rotation based fast backward elimination algorithm for RBF neural network pruning **CTA** p381
Hybrid approach using counterpropagation neural network for power-system network reduction **GTD** p169
Identification of time-varying nonlinear systems using minimal radial basis function neural networks **CTA** p202
Image compression using multilayer neural networks **VIS** p307
Image segmentation using a mixture of principal components representation **VIS** p73

Implementation of intelligent self-organising controllers in DSP controlled electromechanical drives **CTA** p324
Intelligent artefact identification in electroencephalography signal processing **SMT** p193
Inversion control of nonlinear systems with neural network modelling **CTA** p481
Kohonen neural network based approach to voltage weak buses/areas identification **GTD** p340
Large-scale economic dispatch using an improved Hopfield neural network **GTD** p181
Multiobjective neural network for image reconstruction **VIS** p233
Neural implementation of GMV control schemes based on affine input/output models **CTA** p521
Neural-network connection-admission control for ATM networks **COM** p93
Neural network for representation of hysteresis loops **SMT** p263
Nonlinear internal model control using local model networks **CTA** p505
Parameter monitoring using neural-network-processed chromaticity **SMT** p257
Piecewise linear approximation applied to nonlinear function of a neural network **CDS** p313
Real-time identification of missile aerodynamics using a linearised Kalman filter aided by an artificial neural network **CTA** p299
Reduced-order estimator for closed-loop online estimation of cross-directional parameters in a plastics extrusion process **CTA** p549
Robust self-tuning rotated fuzzy basis function controller for robot arms **CTA** p293
Security management architecture for access control to network resources **CDT** p362
Stable receding horizon control based on recurrent networks **CTA** p249
Systolic implementation of higher-order CMAC and its application in colour calibration **CDS** p129
Use of learning automata in distributed fuzzy logic processor training **CTA** p255

NONELECTRIC VARIABLES CONTROL

Autotuning temperature control using identification by multifrequency binary sequences **CTA** p233
Binary encoded 2nd-differential spectrometry using UV-Vis spectral data and neural networks in the estimation of species type and concentration **SMT** p73
Co-ordinated control of multiple robotic manipulators handling a common object–theory and experiments **CTA** p73
Constrained time-efficient and smooth cubic spline trajectory generation for industrial robots **CTA** p467
Convolved and simultaneous two-mode input shapers **CTA** p515
Data fusion and artificial neural networks for biomass estimation **SMT** p69
Driving circuit for ultrasonic motor servo drive with variable-structure adaptive model-following control **EPA** p199
Estimation of speed and armature temperature in a brushed DC drive using the extended Kalman filter **EPA** p13
H^{∞} control for a sensorless permanent-magnet synchronous drive **EPA** p173
Implementation of intelligent self-organising controllers in DSP controlled electromechanical drives **CTA** p324
Improving the accuracy of the rotor resistance estimate for vector-controlled induction machines **EPA** p285
Incremental fuzzy PI control of a solar power plant **CTA** p596
Indirect field-oriented induction motor drive with fuzzy detuning correction and efficiency optimisation controls **EPA** p37
LQG approach for the high-precision track control of ships **CTA** p121
pH control: handling nonlinearity and deadtime with fuzzy relational model-based control **CTA** p263
Power control of a CO_2 laser **CTA** p177
Real time stabilisation of a triple link inverted pendulum using single control input **CTA** p498
Robust control methodology applied to the design of a combined steering/stabiliser system for warships **CTA** p128
Robust PM synchronous motor servo drive with variable-structure model-output-following control **EPA** p317
Robust speed control of brushless DC motor using adaptive input-output linearisation technique **EPA** p469
Simple model of a transport/diffusion system **CTA** p459
Sliding mode and fuzzy control of toggle mechanism using PM synchronous servomotor drive **CTA** p393

NONLINEAR CONTROL SYSTEMS

Analysis and redesign of an antilock brake system controller **CTA** p413
Analysis of neural and fuzzy-power electronic control **SMT** p25
Damping of multimodal oscillations in power systems using variable structure control techniques **GTD** p323
Exact determination of the limit cycles in relay control systems with additional nonlinearities in the feedback loops **CTA** p269
Identification of time-varying nonlinear systems using minimal radial basis function neural networks **CTA** p202
Inversion control of nonlinear systems with neural network modelling **CTA** p481
Learning issues in model reference based fuzzy control **CTA** p605
Model reference adaptive control of dynamic output feedback linearisable systems with unknown high frequency gain **CTA** p427
Multiobjective fuzzy genetic algorithm optimisation approach to nonlinear control system design **CTA** p137
Multiple local Laguerre models for modelling nonlinear dynamic systems of the Wiener class **CTA** p375
Neural implementation of GMV control schemes based on affine input/output models **CTA** p521
Nonlinear autopilot control design for a 2-DOF helicopter model **CTA** p612
Nonlinear internal model control using local model networks **CTA** p505
pH control: handling nonlinearity and deadtime with fuzzy relational model-based control **CTA** p263
Real time stabilisation of a triple link inverted pendulum using single control input **CTA** p498
Robust output tracking for MIMO nonlinear systems: an adaptive fuzzy systems approach **CTA** p537
Robust speed control of brushless DC motor using adaptive input-output linearisation technique **EPA** p469
Stability analysis of fuzzy multivariable systems: vector Lyapunov function approach **CTA** p403
Stable receding horizon control based on recurrent networks **CTA** p249

NONLINEAR NETWORK ANALYSIS

Finding all DC solutions of nonlinear resistive circuits by exploring both polyhedral and rectangular circuits **CDS** p17
GaAs MESFET large-signal modelling for multiport Volterra series analysis **CDS** p40
Piecewise linear approximation applied to nonlinear function of a neural network **CDS** p313

NONLINEAR OPTICS

Carrier density depinning above threshold in semiconductor lasers: effects of carrier heating and spectral hole burning **OPT** p209
Lossless operation of 4×4 laser diode optical gate switches using Y reflection type branching/combining circuits for large-scale integration **OPT** p61
Nearly perfect output power saturation of the semiconductor Raman laser **OPT** p87
Optimisation of bistable quantum well IR phototransistors **OPT** p283
Propagation and imaging of two orthogonally polarised optical beams in a nonlinear graded-index rod lens **OPT** p115
Reduced-power semiconductor all-optical switch design **OPT** p2
Theory of quantum well IR photodetectors with tunnelling electron injection **OPT** p343
Waveform distortion in a gain-saturated semiconductor optical amplifier for NRZ and Manchester formats **OPT** p433

NUMERICAL ANALYSIS

3-D target feature extraction via interferometric SAR **RSN** p71
Accurate analysis and synthesis of annular ring microstrip antennas **MAP** p341
Accurate and efficient evaluation of Green's functions for multilayer normally biased ferrite structures **MAP** p403
Adaptation of hidden Markov model for telephone speech recognition and speaker adaptation **VIS** p129
Adaptive decision fusion for unequiprobable sources **RSN** p105
Adaptive multiresolution analysis based evoked potential filtering **SMT** p149
Adaptive resampling algorithm for image zooming **VIS** p207
Aircraft vertical profile prediction based on surveillance data only **RSN** p301
Analysis of an open-ended waveguide radiator with dielectric plug **MAP** p126
Analysis of electromagnetic scattering by cylinders with edges using a hybrid moment method **MAP** p235
Analysis of microstrip discontinuities by the method of integral equations for overlapping regions **MAP** p449
Axial ratio of a curl antenna **MAP** p488
Bayesian approach to parameter estimation and interpolation of time-varying autoregressive processes using the Gibbs sampler **VIS** p249
BCJR trellis construction for binary linear block codes **COM** p367
BEM analysis of electric field excited by overhead HV lines erected in built-up areas **SMT** p81
Block algorithms for the parametric estimation of signals and systems **VIS** p257
Block momentum-LMS algorithm based on the method of parallel tangents **VIS** p49
Block tridiagonal matrix formulation for inhomogeneous penetrable cylinders **MAP** p184
Calculation of phase and attenuation constants for waveguides loaded with lossy ferrite with longitudinal or transverse magnetisation **MAP** p111
Calculation of thermal fields of underground cable systems with consideration of structural steels constructed in a duct bank **GTD** p541
Capacitance and charge distribution of two cylindrical conductors of finite length **SMT** p280
Cellular CDMA overlay situations **COM** p402
CFAR binary integration detection in nonhomogeneous partially correlated clutter **RSN** p293
CFAR detection for Weibull and other log-log-linear tail clutter distributions **RSN** p64
Compression of SAR images using KLT, VQ and mixture of principal components **RSN** p113
Computationally efficient analysis of buried waveguides with applications to semiconductor lasers **OPT** p14
Constrained time-efficient and smooth cubic spline trajectory generation for industrial robots **CTA** p467
Contour-based correspondence using Fourier descriptors **VIS** p150
Data visualisation and identification of anomalies in power system state estimation using artificial neural networks **GTD** p445
Decomposition approach to unit commitment with reactive constraints **GTD** p113
Designing a fuzzy step size LMS algorithm **VIS** p261
Determination of dielectric distribution of a two-dimensional anisotropic cylinder with multilayer structure **MAP** p229
Digital algorithms for measurement of voltage flicker **GTD** p175
Dimension-descent technique for electromagnetic problems **MAP** p372
Direct reconstruction method for wavelet transform extrema representation **VIS** p193
Direction-of-arrival and frequency estimations for narrowband sources using two single rotation invariance algorithms with the marked subspace **RSN** p234
Dynamic systems reliability evaluation using uncertainty techniques for performance monitoring **CTA** p103
Effect of initial conditions on chaotic ferroresonance in power transformers **GTD** p456
Effects of motion on adaptive arrays **RSN** p15
Efficient and accurate FDTD algorithm for the treatment of curved material boundaries **MAP** p382
Efficient moment method for analysing printed wire loop antennas **MAP** p364
Efficient weighted least-squares algorithm for the design of FIR filters **VIS** p244
Electromagnetic modelling and simulation of multiconductor interconnect networks with inhomogeneous cylindrical substrate **MAP** p347
Electromagnetic waves scattering by nonuniform plasma cylinder **MAP** p61
Enhanced interframe coding based on morphological segmentation **VIS** p220
Estimation of autoregressive signals from noisy measurements **VIS** p39
Evaluation of eddy losses due to high current leads in transformers **SMT** p34
Evaluation of multiple diffraction integrals: computational speed and accuracy considerations **MAP** p35
Experimental and simulation studies of the coaxially fed U-slot rectangular patch antenna **MAP** p354
Fast conditioning algorithm for significant zero curvature detection **VIS** p23
FD-TD design of short backfire antennas **MAP** p1
Ferroresonance in electromagnetic voltage transformers: a study based on nonlinear dynamics **GTD** p383
Finite-difference time-domain analysis of inset dielectric guide and its application to waveguide transitions **MAP** p477

Finite element analysis of scattering using coupled basis functions for elliptical boundaries **MAP** p501
Frequency response of N-port planar gyromagnetic circuits using the mutual energy-finite element method **MAP** p221
General edge element approach to lossy and dispersive structures in anisotropic media **MAP** p81
Generalised approach to modelling shielded printed-circuit transmission lines **MAP** p103
Generalised iterative method for solving 2D multiscattering problems using spectral techniques **MAP** p73
Generalised method for pruning an FFT type of transform **VIS** p189
Green function for radiation and propagation in helicoidal bianisotropic mediums **MAP** p57
Green's functions for planar soft and hard surfaces derived by asymptotic boundary conditions **MAP** p321
Haar wavelet method for solving lumped and distributed-parameter systems **CTA** p87
Hybrid wave propagation in generalised Goubau-type striplines **MAP** p167
Identification of time-varying nonlinear systems using minimal radial basis function neural networks **CTA** p202
Image compression using multilayer neural networks **VIS** p307
Improved numerical simulation of electromagnetic wave scattering from perfectly conducting random surfaces **MAP** p256
Indirect boundary integral equation method as applied for wave propagation in the stator winding of an electric machine **SMT** p223
Integrated-circuit antenna for high-permittivity substrates **MAP** p47
Interferometric SAR phase unwrapping using the finite element method **RSN** p266
Interpolation of reflector surfaces by pseudosplines **MAP** p42
Inversion control of nonlinear systems with neural network modelling **CTA** p481
IQML algorithm for multiple signal parameter estimation **RSN** p237
Iterative solutions of MFIE for computing electromagnetic scattering of large open-ended cavities **MAP** p141
Linear indicator for voltage collapse in power systems **GTD** p139
Markov analysis of multichannel star-connected network with channel sensing and collision detection **COM** p331
Maximum a posteriori spatial probability segmentation **VIS** p161
Method of moments analysis of a small aperture radial line slot antenna using the rectangular cavity Green's function **MAP** p498
Methodology and computer package for generation rescheduling **GTD** p301
Minimising rotor losses in high-speed high-power permanent magnet synchronous generators with rectifier load **EPA** p331
Model order selection for the singular value decomposition and the discrete Karhunen-Loeve transform using a Bayesian approach **VIS** p116
Modelling 1-D signals using Hermite basis functions **VIS** p345
Modelling and identification of iron losses in nonoriented steel laminations using Preisach theory **EPA** p227
Modelling and numerical solution of multibranched DC rail traction power systems [comment and reply] **EPA** p74
Modelling multimedia traffic over ATM using MMBP **COM** p307
Moment-method analysis of circularly symmetric reflectors using bandlimited basis functions **MAP** p179
Moment method analysis of printed single-arm wire spiral antennas using curved segments **MAP** p261
Multimode equivalent network representation for the Y-junction of rectangular waveguides **MAP** p161
Multiobjective neural network for image reconstruction **VIS** p233
Multiple resolution image restoration **VIS** p199
Newton-Raphson approach for the analysis of ferroresonant circuits **GTD** p489
Newton's approach to gain-controlled robust pole placement **CTA** p439
Optimal polygonal approximation of digitised curves **VIS** p8
Parallel logic simulation with assignable delays on a vector multiprocessor computer **CDS** p5
Performance analysis of space-priority mechanisms in an input and output queueing ATM switch **COM** p229
Polygon subdomain basis-function model for the ring element in FSS arrays **MAP** p209
Predicting the complexity of large combinational circuits through symbolic spectral analysis of their functional specifications **CDT** p343
Reduced-order estimator for closed-loop online estimation of cross-directional parameters in a plastics extrusion process **CTA** p549
Robust rotation-invariant texture classification: wavelet, Gabor filter and GMRF based schemes **VIS** p180
Rotated texture classification by improved iterative morphological decomposition **VIS** p171
Scattering by a right-angled lossy dielectric wedge **MAP** p392
Short-term power purchases considering uncertain prices **GTD** p423
Similarity measure for superquadrics **VIS** p237
Simple model of a transport/diffusion system **CTA** p459
Simulation of Berenger's perfectly matched layer with a modified TLM node **MAP** p205
Simultaneous stabilisation of power systems using genetic algorithms **GTD** p39
Sliding mode and fuzzy control of toggle mechanism using PM synchronous servo-motor drive **CTA** p393
State-space modelling and eigenvalue analysis of the slip energy recovery drive **EPA** p27
Statistical analysis of the eigenvector projection method for adaptive spatial filtering of interference **RSN** p57
Subsea vehicle path planning using nonlinear programming and constructive solid geometry **CTA** p143
Systolic arrays for the discrete Hilbert transform **CDS** p259
Theoretical and experimental study of a cavity-backed annular-slot antenna **MAP** p337
Transcoding of single-layer MPEG video into lower rates **VIS** p377
Treatment of two-dimensional E-plane bandstop filters using the finite element method **MAP** p411
Unified power flow controller: a critical comparison of Newton-Raphson UPFC algorithms in power flow studies **GTD** p437
Updating the Jacobi SVD for nonstationary data **VIS** p108
Wavelet transforms on vector spaces as a method of multispectral image characterisation **VIS** p89
Wraparound patch resonators on a composite ground plane **MAP** p301

OPTICAL BEAM MODULATORS

Phase demodulation in optical fibre Fabry-Perot sensors with inexact phase steps **OPT** p130
Quasi-TE_{00} single-mode optical waveguides for electro-optical modulation at 1.3 μm using standard SIMOX material **OPT** p83

OPTICAL COMMUNICATION

Continuously distributed phase shifts by chirped distributed-feedback gratings for 1.55 μm distributed-feedback lasers **OPT** p256
Highly parallel optics in ATM switching networks **OPT** p53
Lossless operation of 4×4 laser diode optical gate switches using Y reflection type branching/combining circuits for large-scale integration **OPT** p61
Multiple output semiconductor ring lasers with high external quantum efficiency **OPT** p19
Novel double-ring optical-guided-wave Vernier resonator **OPT** p203
Reduced-power semiconductor all-optical switch design **OPT** p2

OPTICAL IMAGE PROCESSING

3-D tracking and motion estimation using hierarchical Kalman filter **VIS** p293
Adaptive resampling algorithm for image zooming **VIS** p207
Advances in high resolution distributed temperature sensing using the time-correlated single photon counting technique **OPT** p183
Application of the morphological geodesic reconstruction to image sequence analysis **VIS** p339
Automated parameter extraction for ultrasonic flaw analysis **SMT** p93
Classification of partial discharge sources in gas-insulated substations using novel preprocessing strategies **SMT** p17
Closed-loop motion compensation for video coding standards **VIS** p227
Compression of SAR images using KLT, VQ and mixture of principal components **RSN** p113
Consistent symmetric axis method for robust detection of ellipses **VIS** p332
Contour-based correspondence using Fourier descriptors **VIS** p150
Detecting anisotropic scattering with hidden Markov models **RSN** p81
Detection of human faces in colour images **VIS** p384
Edge oriented block motion estimation for video coding **VIS** p136
Electrical filtering strategies to compensate waveform distortion in optically amplified IM/DD systems **OPT** p75
Enhanced interframe coding based on morphological segmentation **VIS** p220
Error-resilience improvement for block-transform video coders **VIS** p369
Extracting the cliques from a neighbourhood system **VIS** p168
Extraction of independent signal sources using a deflationary exploratory projection pursuit network with lateral inhibition **VIS** p299
Fast codeword search algorithm for real-time codebook generation in adaptive VQ **VIS** p278
Fast conditioning algorithm for significant zero curvature detection **VIS** p23
Generalised approach to the recognition of structurally similar handwritten characters using multiple expert classifiers **VIS** p15
Generalised method for pruning an FFT type of transform **VIS** p189
Illuminant-tilt estimation from images of isotropic texture **VIS** p213
Image compression using multilayer neural networks **VIS** p307
Image segmentation using a mixture of principal components representation **VIS** p73
Index-compressed vector quantisation based on index mapping **VIS** p31
Intelligent artefact identification in electroencephalography signal processing **SMT** p193
Interferometric SAR phase unwrapping using the finite element method **RSN** p266
Interferometric synthetic aperture sonar for high resolution 3-D mapping of the seabed **RSN** p96
Joint sublattice selection and prefilter design for the optimal decimation of 2-D digital signals **VIS** p98
Low complexity sub-band image coding with pseudo QMF and pyramidal lattice VQ **VIS** p81
Low-decoding-complexity TDM coded modulation with unequal error protection **COM** p372
Maximum a posteriori spatial probability segmentation **VIS** p161
Maximum-likelihood ISAR image autofocusing technique based on instantaneous frequency estimation **RSN** p284
Modelling of capacitance tomography sensors **SMT** p203
Multicomponent time-division-multiplexed optical fibre laser Doppler anemometry **OPT** p168
Multiobjective neural network for image reconstruction **VIS** p233
Multiple resolution image restoration **VIS** p199
Novel high range resolution approach in microwave imaging **RSN** p177
Novel image compression method using edge-oriented classifier and novel predictive noiseless coding method **VIS** p361
On-chip memory module designs for video-signal processing **CDS** p138
Optimal polygonal approximation of digitised curves **VIS** p8
Performance improvement of fibre-optic code-division multiple-access systems by using error-correction codes **COM** p316
Properties of contour codes **VIS** p145
Robust rotation-invariant texture classification: wavelet, Gabor filter and GMRF based schemes **VIS** p180
Rotated texture classification by improved iterative morphological decomposition **VIS** p171
Segmentation of uniform-coloured text from colour graphics background **VIS** p317
Similarity measure for superquadrics **VIS** p237
Simulation and analysis of synthetic sidescan sonar images **RSN** p219
Statistical modelling of ocean SAR images **RSN** p348
Sub-pixel non-parametric PSF estimation for image enhancement **VIS** p285
Systolic implementation of higher-order CMAC and its application in colour calibration **CDS** p129
Target angular motion effects on ISAR imaging **RSN** p87
Transcoding of single-layer MPEG video into lower rates **VIS** p377
Use of curvilinear SAR for three-dimensional target feature extraction **RSN** p275
Use of log polar space for foveation and feature recognition **VIS** p323
VSAR: a high resolution radar system for detection of moving targets **RSN** p205
Wavelet transforms on vector spaces as a method of multispectral image characterisation **VIS** p89

OPTICAL LINKS AND EQUIPMENT

Analysis and design of survivable telecommunications networks **COM** p322
BER performance of multiwavelength optical cross-connected networks with deflection routing **COM** p114
Capacity bounding of coherence multiplexed local area networks due to interferometric noise **OPT** p69
Coupled reservation protocols for hierarchical single-hop photonic networks **COM** p247
"Dead reckoning"–a primitive and efficient self-routing protocol for ultrafast mesh networks **COM** p135
Electrical filtering strategies to compensate waveform distortion in optically amplified IM/DD systems **OPT** p75

Performance analysis of FDDI LANs using numerical methods **CDT** p149
Performance improvement of fibre-optic code-division multiple-access systems by using error-correction codes **COM** p316
Performance of dynamic path optical networks **OPT** p235

OPTICAL MATERIALS AND DEVICES

2.5 μm light-emitting diodes in $InAs_{0.36}Sb_{0.20}P_{0.44}$/InAs for HF detection **OPT** p355
AlGaInP multiquantum well light-emitting diodes **OPT** p405
Analysis of fibre optic Michelson interferometric sensor distortion caused by the imperfect properties of its 3×3 coupler **OPT** p377
Carrier dynamics model of fast refractive index changes in semiconductor laser amplifiers **OPT** p189
Channel waveguides formed by ion implantation of PECVD grown silica **OPT** p97
Characteristics of tapered rib-waveguides for high power semiconductor optical sources **OPT** p8
Comparison of IR LED gas sensors with thermal source products **OPT** p266
Comparison of light emission from room temperature light emitting diodes with InAs active regions grown by LPE **OPT** p287
Complex general Fourier variational method applied to the analysis of semiconductor lasers **OPT** p241
Computationally efficient analysis of buried waveguides with applications to semiconductor lasers **OPT** p14
Continuously distributed phase shifts by chirped distributed-feedback gratings for 1.55 μm distributed-feedback lasers **OPT** p256
Development of a fibre optic micro-optrode for intracellular pH measurements **OPT** p162
Development of micro-optrodes using sol-gel immobilisation **SMT** p241
Direction finding on spread-spectrum signals using the time-domain filtered cross spectral density **RSN** p315
Effect of optical feedback on fast modulated semiconductor lasers **OPT** p30
Extrinsic Fabry-Perot interferometer vibration and acoustic sensor systems for airport ground traffic monitoring **OPT** p134
Fabrication and coupling-to-fibre characteristics of laser diodes integrated with a spot-size converter having a lateral taper **OPT** p104
Fibre optic spectral polarimetry for sensing multiple stress-loaded locations along a length of fibre **OPT** p176
Growth and characterisation of mid-IR $InAs_{0.9}Sb_{0.1}$-InAs strained multiple quantum well light emitting diodes grown on InAs substrates **OPT** p295
High quality AlGaSb, AlGaAsSb and InGaAsSb epitaxial layers grown by liquid-phase epitaxy from Sb-rich melts **OPT** p438
In(As,Sb) superlattice-based emitters for mid-IR wavelengths **OPT** p262
Influence of buffer layer and processing on the dark current of 2.5 μm-wavelength 2%-mismatched InGaAs photodetectors **OPT** p277
Local supermode analysis of tapered fibre sensor **OPT** p383
Lossless operation of 4×4 laser diode optical gate switches using Y reflection type branching/combining circuits for large-scale integration **OPT** p61
Mathematical modelling of thermal effects in semiconductor laser operation **OPT** p389
Mercury cadmium telluride staring arrays for mid-IR detection **OPT** p327
Micromachined optical tunable filter for long term stability gas sensors **OPT** p350
Microwave modelling of optical diffraction grating devices **OPT** p221
Modulation bandwidth optimisation for unipolar intersubband semiconductor lasers **OPT** p44
Multiple output semiconductor ring lasers with high external quantum efficiency **OPT** p19
Nonperturbative calculation of bend loss for a pulse in a bent planar waveguide **OPT** p91
Novel double-ring optical-guided-wave Vernier resonator **OPT** p203
Novel materials and device design by metal-organic chemical vapour deposition for use in IR emitters **OPT** p271
Optimisation of bistable quantum well IR phototransistors **OPT** p283
Optimisation of signal-to-noise ratio in an optical current measurement system using different detection schemes **SMT** p175
Parameter monitoring using neural-network-processed chromaticity **SMT** p257
Photolithographic method for producing metal-dissolved diffractive structures in As-S glasses **OPT** p426
Picosecond free-electron laser studies of Auger recombination in arsenic-rich $InAs_{1-x}Sb_x$ strained layer superlattices at 300 K **OPT** p331
Propagation and imaging of two orthogonally polarised optical beams in a nonlinear graded-index rod lens **OPT** p115
Pulsed wideband IR thermal source **OPT** p315
Quasi-TE_{00} single-mode optical waveguides for electro-optical modulation at 1.3 μm using standard SIMOX material **OPT** p83
Reduced-power semiconductor all-optical switch design **OPT** p2
Reduction of coupling coefficients for distributed Bragg reflection in corrugated narrow-rib waveguides **OPT** p101
Sensitivity analysis of the optical-waveguide properties of quantum cascade lasers **OPT** p323
Simultaneous measurement of strain and temperature using the first- and second-order diffraction wavelengths of Bragg gratings **OPT** p156
Simultaneous measurement of temperature and strain using fibre Bragg gratings and Brillouin scattering **OPT** p151
Stimulated IR emission by quantum magnetoelectric photoeffect of narrow-gap semiconductors **OPT** p305
Strained GaInAs quantum well mid-IR emitters **OPT** p360
Surface plasmon effects and waveguide properties of quantum cascade lasers **OPT** p48
Threshold and above-threshold analysis of corrugation-pitch-modulated DFB lasers with inhomogeneous coupling coefficient **OPT** p365
Use of multiple-wavelength and/or TE/TM effective-refractive-index measurements to reconstruct refractive-index profiles **OPT** p213
Weighted-index beam-propagation method for analysis of three-dimensional optical structures **OPT** p197

OPTICAL RADAR

High-frequency phase measurement for optical rangefinding system **SMT** p141

OPTICAL SPECTROSCOPY

Binary encoded 2nd-differential spectrometry using UV-Vis spectral data and neural networks in the estimation of species type and concentration **SMT** p73

OPTIMAL CONTROL

Case study comparison of robust linear quadratic design and mixed-sensitivity H∞ control **CTA** p476
Connectionist network for dynamic programming problems **CDT** p163
Constrained cautious stable predictive control **CTA** p313
Environmental/economic dispatch using fuzzy logic controlled genetic algorithms **GTD** p377
Generalised predictive control (GPC): a powerful control tool in medicine **CTA** p8
H∞ control for a sensorless permanent-magnet synchronous drive **EPA** p173
H∞ robust control design for dynamic ship positioning **CTA** p110
Implementation of a self-tuning AVR **CTA** p32
Improved algorithm for multivariable stable generalised predictive control **CTA** p309
Improvement of network damping and transient stability by active and reactive power control **GTD** p125
Indirect field-oriented induction motor drive with fuzzy detuning correction and efficiency optimisation controls **EPA** p37
Inversion control of nonlinear systems with neural network modelling **CTA** p481
LQ control of sinusoidal current PWM rectifiers **EPA** p95
LQG approach for the high-precision track control of ships **CTA** p121
Multiobjective fuzzy genetic algorithm optimisation approach to nonlinear control system design **CTA** p137
Neural implementation of GMV control schemes based on affine input/output models **CTA** p521
New identification based weighted H∞ norm approximation scheme and its applications to controller reduction **CTA** p61
Optimal observers for disturbance rejection in two-degree-of-freedom LQI servo systems **CTA** p575
Optimal quadratic guaranteed cost control of a class of uncertain time-delay systems **CTA** p183
Optimal traffic control at railway junctions **EPA** p140
Optimising train movements through coast control using genetic algorithms **EPA** p65
Output feedback TCSC controllers to improve damping of meshed multi-machine power systems **GTD** p243
Predictive analogue generator excitation controller **GTD** p271
Quadratic guaranteed cost and disc pole location control for discrete-time uncertain systems **CTA** p545
Real time stabilisation of a triple link inverted pendulum using single control input **CTA** p498
Robust control methodology applied to the design of a combined steering/stabiliser system for warships **CTA** p128
Robust control of interval plants: a time domain method **CTA** p347
Robust system identification from weighted impulse response data and worst-case error bounds **CTA** p67
Simplified predictive instantaneous current control for single-phase and three-phase voltage-fed PFC converters **EPA** p46
Simultaneous stabilisation of power systems using genetic algorithms **GTD** p39
Time-domain method for the design of optimal linear controllers **CTA** p287
True average current predictive controller for four-wire PWM reversible rectifiers **EPA** p397

OPTIMISATION

Capacitor placement in distribution systems using heuristic search strategies **GTD** p225
Fuzzy optimisation of capacitors in distribution systems **GTD** p415
Influence of laser parameters and unpumped regions near the facets on the power level for catastrophic optical damage in short wavelength lasers **OPT** p109
Large-scale economic dispatch using an improved Hopfield neural network **GTD** p181
Modulation bandwidth optimisation for unipolar intersubband semiconductor lasers **OPT** p44
Multistage trellis coded quantisation (MS-TCQ) design and performance **COM** p61
New dynamic, branch exchange method for optimal distribution system planning **GTD** p333
Optimal polygonal approximation of digitised curves **VIS** p8
Optimisation of bistable quantum well IR phototransistors **OPT** p283
Quadratic guaranteed cost and disc pole location control for discrete-time uncertain systems **CTA** p545
Realisation of two-degrees-of-freedom compensators **CTA** p589
Reduced-power semiconductor all-optical switch design **OPT** p2
Short-term load forecasting using threshold autoregressive models **GTD** p477
Short-term power purchases considering uncertain prices **GTD** p423
Spiral fibre microbend sensors **OPT** p145
Stability analysis of fuzzy multivariable systems: vector Lyapunov function approach **CTA** p403
Stability of multichannel sound control systems **VIS** p1
Tabu search approach to alarm processing in power systems **GTD** p31
Threshold and above-threshold analysis of corrugation-pitch-modulated DFB lasers with inhomogeneous coupling coefficient **OPT** p365
Unified PID design method based on a maximum peak resonance specification **CTA** p566

PARALLEL PROCESSING

Alternative systolic array for non-square-root Cholesky decomposition **CDT** p57
Comparison of dynamic and static load-balancing strategies in heterogeneous distributed systems **CDT** p100
Design and application of Parsim–a message-passing computer simulator **CDT** p7
Design methodology for the implementation of multidimensional circular convolution **CDS** p324
Design of a clock synchronisation sub-system for parallel embedded systems **CDT** p65
Distributed algorithms for mobile hosts **CDT** p49
Effective and concurrent checkpointing and recovery in distributed systems **CDT** p304
Efficient scheduling of behavioural descriptions in high-level synthesis **CDT** p75
Feasibility test for real-time communication using wormhole routing **CDT** p273
Hamiltonicity, vertex symmetry, and broadcasting of uni-directional hypercubes **CDT** p169
HDL-specific source level behavioural optimisation **CDT** p138
Increasing cache bandwidth using multiport caches for exploiting ILP in non-numerical code **CDT** p295
Optimal fault-tolerant design approach for VLSI array processors **CDT** p15
Parallel pipeline implementation of wavelet transforms **VIS** p355
Predictable distributed dynamic scheduling in RTDOS **CDT** p195

Stochastic model of a cache-coherency overhead in SCI rings **CDT** p175
Systolic arrays for the discrete Hilbert transform **CDS** p259
Task tree scheduling onto linear arrays using tabu search **CDT** p317

PARAMETER ESTIMATION

3-D target feature extraction via interferometric SAR **RSN** p71
Adaptive control scheme using real time tuning of the parameter estimator **CTA** p241
Adaptive update rate tracking using IMM nearest neighbour algorithm incorporating rapid re-looks **RSN** p195
Aircraft vertical profile prediction based on surveillance data only **RSN** p301
Bayesian approach to parameter estimation and interpolation of time-varying autoregressive processes using the Gibbs sampler **VIS** p249
Comment on "Advances in aircraft-height estimation using distance-measuring equipment" [and reply] **RSN** p235
Consistent parameter estimation of systems disturbed by correlated noise **CTA** p40
Estimation of autoregressive signals from noisy measurements **VIS** p39
Estimation of speed and armature temperature in a brushed DC drive using the extended Kalman filter **EPA** p13
Estimation of speed, stator temperature and rotor temperature in cage induction motor drive using the extended Kalman filter algorithm **EPA** p301
Evaluation of fractional, lower-order statistics-based detection algorithms on real radar sea-clutter data **RSN** p29
Harmonic worst-case identification and filter optimal design of MRT systems using genetic algorithms **EPA** p372
Hybrid procedure for CFAR in non-Gaussian clutter **RSN** p361
Illuminant-tilt estimation from images of isotropic texture **VIS** p213
Improved PIN diode circuit model with automatic parameter extraction technique **CDS** p329
Improving the accuracy of the rotor resistance estimate for vector-controlled induction machines **EPA** p285
Kohonen neural network based approach to voltage weak buses/areas identification **GTD** p340
Lattice filters based on the delta operator **VIS** p125
Modelling 1-D signals using Hermite basis functions **VIS** p345
Real-time identification of missile aerodynamics using a linearised Kalman filter aided by an artificial neural network **CTA** p299
Reduced-order estimator for closed-loop online estimation of cross-directional parameters in a plastics extrusion process **CTA** p549
Robust monoparametric multiradar CFAR detection against non-Gaussian spiky clutter **RSN** p131
Simple model of a transport/diffusion system **CTA** p459
Use of curvilinear SAR for three-dimensional target feature extraction **RSN** p275
User position estimation for search and rescue using satellite in LEO constellation **RSN** p22

PATTERN RECOGNITION

Adaptation of hidden Markov model for telephone speech recognition and speaker adaptation **VIS** p129
Adaptive resampling algorithm for image zooming **VIS** p207
Application of the morphological geodesic reconstruction to image sequence analysis **VIS** p339
Automated parameter extraction for ultrasonic flaw analysis **SMT** p93
Binary encoded 2nd-differential spectrometry using UV-Vis spectral data and neural networks in the estimation of species type and concentration **SMT** p73
Classification of partial discharge sources in gas-insulated substations using novel preprocessing strategies **SMT** p17
Consistent symmetric axis method for robust detection of ellipses **VIS** p332
Contour-based correspondence using Fourier descriptors **VIS** p150
Data fusion and artificial neural networks for biomass estimation **SMT** p69
Detection of human faces in colour images **VIS** p384
Edge oriented block motion estimation for video coding **VIS** p136
Extracting the cliques from a neighbourhood system **VIS** p168
Extraction of independent signal sources using a deflationary exploratory projection pursuit network with lateral inhibition **VIS** p299
Fast codeword search algorithm for real-time codebook generation in adaptive VQ **VIS** p278
Fast conditioning algorithm for significant zero curvature detection **VIS** p23
Generalised method for pruning an FFT type of transform **VIS** p189
Givens rotation based fast backward elimination algorithm for RBF neural network pruning **CTA** p381
Illuminant-tilt estimation from images of isotropic texture **VIS** p213
Image compression using multilayer neural networks **VIS** p307
Image segmentation using a mixture of principal components representation **VIS** p73
Intelligent artefact identification in electroencephalography signal processing **SMT** p193
Intelligent signal processing of evoked potentials for anaesthesia monitoring and control **CTA** p354
Joint sublattice selection and prefilter design for the optimal decimation of 2-D digital signals **VIS** p98
Low complexity sub-band image coding with pseudo QMF and pyramidal lattice VQ **VIS** p81
Maximum a posteriori spatial probability segmentation **VIS** p161
Multiple resolution image restoration **VIS** p199
Novel image compression method using edge-oriented classifier and novel predictive noiseless coding method **VIS** p361
Optimal polygonal approximation of digitised curves **VIS** p8
Robust rotation-invariant texture classification: wavelet, Gabor filter and GMRF based schemes **VIS** p180
Rotated texture classification by improved iterative morphological decomposition **VIS** p171
Similarity measure for superquadrics **VIS** p237
Subsyllable-based discriminative segmental Bayesian network for Mandarin speech keyword spotting **VIS** p65
Use of log polar space for foveation and feature recognition **VIS** p323
Wavelet transforms on vector spaces as a method of multispectral image characterisation **VIS** p89

PERFORMANCE EVALUATION

Comparison of dynamic and static load-balancing strategies in heterogeneous distributed systems **CDT** p100
Design and application of Parsim–a message-passing computer simulator **CDT** p7
Design and modelling of a high performance differential bipolar self-timed microprocessor **CDT** p371
Dynamic parity logging disk arrays for engineering database systems **CDT** p255
Dynamic systems reliability evaluation using uncertainty techniques for performance monitoring **CTA** p103
Increasing cache bandwidth using multiport caches for exploiting ILP in non-numerical code **CDT** p295
Optimal fault-tolerant design approach for VLSI array processors **CDT** p15
Performance analysis and design of token-passing networks with two message priorities **COM** p11
Performance analysis of FDDI LANs using numerical methods **CDT** p149
Stochastic model of a cache-coherency overhead in SCI rings **CDT** p175

PLASMA INTERACTIONS

Electromagnetic waves scattering by nonuniform plasma cylinder **MAP** p61

POWER ELECTRONICS

Analysis and design of a fixed-frequency LCL-type series-resonant converter with capacitive output filter **CDS** p97
Analysis of neural and fuzzy-power electronic control **SMT** p25
Analysis of the single-phase four-quadrant PWM converter resulting in steady-state and small-signal dynamic models **EPA** p241
Economic UPS structure with phase-controlled battery charger and input-power-factor improvement **EPA** p221
High performance control of the series-parallel resonant converter **EPA** p131
High power GTO thyristor chopper applications with passive snubber energy recovery **EPA** p381
Improved PIN diode circuit model with automatic parameter extraction technique **CDS** p329
LQ control of sinusoidal current PWM rectifiers **EPA** p95
Novel 18-step diode rectifier circuit with nonisolated phase shifting transformers **EPA** p1
Optimised input filter design and low-loss switching techniques for a practical matrix converter **EPA** p53
Single-phase matrix converter **EPA** p235
Single-phase step-up/down rectifier with improved supply current waveform **EPA** p6
Switching loss minimised space vector PWM method for IGBT three-level inverter **EPA** p182
Three-phase AC/single-phase AC converters with resonant circuits for high operating frequencies **EPA** p207

POWER ENGINEERING COMPUTING

Analysis and design of a three-level PWM converter system for railway-traction applications **EPA** p357
Application of artificial neural networks to the dynamic analysis of the voltage stability problem **GTD** p371
Artificial intelligence algorithms for short term scheduling of thermal generators and pumped-storage **GTD** p193
BEM analysis of electric field excited by overhead HV lines erected in built-up areas **SMT** p81
Classification of partial discharge sources in gas-insulated substations using novel preprocessing strategies **SMT** p17
Comprehensive algorithm for hydrothermal coordination **GTD** p482
Computer-based strategy for the restoration problem in electric power distribution systems **GTD** p389
Computer-optimised smooth-torque current waveforms for switched-reluctance motors **EPA** p310
Data visualisation and identification of anomalies in power system state estimation using artificial neural networks **GTD** p445
Digital algorithms for measurement of voltage flicker **GTD** p175
Fault diagnosis of power transformers: application of fuzzy set theory, expert systems and artificial neural networks **SMT** p39
Feasibility study of transient stability analysis for operator training simulators **GTD** p510
Field studies using a neural-net-based approach for fault diagnosis in distribution networks **GTD** p429
Full fuzzy control of a DSP-based high performance induction motor drive **CTA** p361
Fuzzy assessment of power system transient stability level based on steady-state data **GTD** p525
Fuzzy logic approach in power system fault section identification **GTD** p406
Fuzzy rule-based expert system for power system fault diagnosis **GTD** p186
Hybrid approach using counterpropagation neural network for power-system network reduction **GTD** p169
Improved simulation of HVDC converter transformers in electromagnetic transient programs **GTD** p100
Improving the accuracy of the rotor resistance estimate for vector-controlled induction machines **EPA** p285
Kohonen neural network based approach to voltage weak buses/areas identification **GTD** p340
Large-scale economic dispatch using an improved Hopfield neural network **GTD** p181
Mathematical models of a three-level advanced static VAr compensator **GTD** p201
Methodology and computer package for generation rescheduling **GTD** p301
Modelling and simulation of the Torus generator **EPA** p446
Quadratic sensitivities for power system steady-state control **GTD** p317
Time-domain modelling of power transformers using modal analysis **EPA** p77

POWER SYSTEM CONTROL

Active power filter with sliding mode control **GTD** p564
Analysis and design of a flyback zero-current switched quasiresonant AC/DC converter **EPA** p401
Analysis and design of a three-level PWM converter system for railway-traction applications **EPA** p357
Analysis of neural and fuzzy-power electronic control **SMT** p25
Analysis of the single-phase four-quadrant PWM converter resulting in steady-state and small-signal dynamic models **EPA** p241
Autotuning temperature control using identification by multifrequency binary sequences **CTA** p233
Co-ordination of emergency secondary-voltage control and load shedding to prevent voltage instability **GTD** p293

Computer-based strategy for the restoration problem in electric power distribution systems **GTD** p389
Damping of multimodal oscillations in power systems using variable structure control techniques **GTD** p323
Distribution system voltage and reactive power control based on probabilistic load flow analysis **GTD** p363
Driving circuit for ultrasonic motor servo drive with variable-structure adaptive model-following control **EPA** p199
Dynamic modelling of a unified power flow controller **GTD** p7
Effects of flux level on a CSI-fed field-oriented induction motor **EPA** p295
Environmental/economic dispatch using fuzzy logic controlled genetic algorithms **GTD** p377
Estimation of speed and armature temperature in a brushed DC drive using the extended Kalman filter **EPA** p13
Evaluation of load shedding to prevent dynamic voltage instability based on extended fuzzy reasoning **GTD** p81
Exact analysis of a multipulse shunt converter compensator or Statcon. I. Performance **GTD** p213
Fault diagnosis of power transformers: application of fuzzy set theory, expert systems and artificial neural networks **SMT** p39
Full fuzzy control of a DSP-based high performance induction motor drive **CTA** p361
H∞ control for a sensorless permanent-magnet synchronous drive **EPA** p173
High-frequency switching-mode power amplifier for shaker armature excitation **EPA** p415
High performance control of the series-parallel resonant converter **EPA** p131
Implementation of intelligent self-organising controllers in DSP controlled electromechanical drives **CTA** p324
Improvement of network damping and transient stability by active and reactive power control **GTD** p125
Improving the accuracy of the rotor resistance estimate for vector-controlled induction machines **EPA** p285
Incremental fuzzy PI control of a solar power plant **CTA** p596
Indices for selecting the best location of PSSs or FACTS-based stabilisers in multimachine power systems: a comparative study **GTD** p155
Indirect field-oriented induction motor drive with fuzzy detuning correction and efficiency optimisation controls **EPA** p37
LQ control of sinusoidal current PWM rectifiers **EPA** p95
Mathematical models of a three-level advanced static VAr compensator **GTD** p201
Modelling and design of a reversible three-phase switching mode rectifier **EPA** p389
Output feedback TCSC controllers to improve damping of meshed multi-machine power systems **GTD** p243
Predictive analogue generator excitation controller **GTD** p271
PWM-controlled series compensation with low harmonic distortion **GTD** p555
Quadratic sensitivities for power system steady-state control **GTD** p317
Robust decentralised design for multiple FACTS damping controllers **GTD** p61
Robust PM synchronous motor servo drive with variable-structure model-output-following control **EPA** p317
Robust speed control of brushless DC motor using adaptive input-output linearisation technique **EPA** p469
Selection of installing locations and feedback signals of FACTS-based stabilisers in multimachine power systems by reduced-order modal analysis **GTD** p263
Simplified predictive instantaneous current control for single-phase and three-phase voltage-fed PFC converters **EPA** p46
Simultaneous stabilisation of power systems using genetic algorithms **GTD** p39
True average current predictive controller for four-wire PWM reversible rectifiers **EPA** p397
Unified power flow controller: a critical comparison of Newton-Raphson UPFC algorithms in power flow studies **GTD** p437
Voltage control by tap-changing transformers for a radial distribution network **GTD** p517

POWER SYSTEM MANAGEMENT

Active power filter with sliding mode control **GTD** p564
Advanced engineered-conditioning genetic approach to power economic dispatch **GTD** p285
Co-ordination of emergency secondary-voltage control and load shedding to prevent voltage instability **GTD** p293
Computer-based strategy for the restoration problem in electric power distribution systems **GTD** p389
Damping of multimodal oscillations in power systems using variable structure control techniques **GTD** p323
Distribution system voltage and reactive power control based on probabilistic load flow analysis **GTD** p363
Dynamic modelling of a unified power flow controller **GTD** p7
Efficient loss-of-load cost evaluation by combined pseudo-sequential and state transition simulation **GTD** p147
Elimination of merchandise surplus due to spot pricing of electricity **GTD** p399
Environmental/economic dispatch using fuzzy logic controlled genetic algorithms **GTD** p377
Evaluation of load shedding to prevent dynamic voltage instability based on extended fuzzy reasoning **GTD** p81
Fixed/switched type shunt capacitor planning of distribution systems by considering customer load patterns and simplified feeder model **GTD** p533
Improvement of network damping and transient stability by active and reactive power control **GTD** p125
Indices for selecting the best location of PSSs or FACTS-based stabilisers in multimachine power systems: a comparative study **GTD** p155
Large-scale economic dispatch using an improved Hopfield neural network **GTD** p181
Mathematical models of a three-level advanced static VAr compensator **GTD** p201
Methodology and computer package for generation rescheduling **GTD** p301
Model for security of service costing in electric transmission systems **GTD** p521
New concept in fault location for overhead distribution systems using superimposed components **GTD** p309
New dynamic, branch exchange method for optimal distribution system planning **GTD** p333
Novel four-bridge PWM static VAr compensator **EPA** p249
On-line dynamic-security contingency screening and ranking **GTD** p132
Open-loop VAr compensator for industrial applications, using a single PWM pattern **EPA** p257
Output feedback TCSC controllers to improve damping of meshed multi-machine power systems **GTD** p243
PWM-controlled series compensation with low harmonic distortion **GTD** p555
Quadratic sensitivities for power system steady-state control **GTD** p317
Robust decentralised design for multiple FACTS damping controllers **GTD** p61
Selection of installing locations and feedback signals of FACTS-based stabilisers in multimachine power systems by reduced-order modal analysis **GTD** p263
Short-term load forecasting for demand side management **GTD** p68
Short-term power purchases considering uncertain prices **GTD** p423
Simplified predictive instantaneous current control for single-phase and three-phase voltage-fed PFC converters **EPA** p46
Simultaneous stabilisation of power systems using genetic algorithms **GTD** p39
Tabu search approach to alarm processing in power systems **GTD** p31
Unified power flow controller: a critical comparison of Newton-Raphson UPFC algorithms in power flow studies **GTD** p437
Voltage control by tap-changing transformers for a radial distribution network **GTD** p517
Zero-voltage-switching three-phase single-stage power factor correction convertor **EPA** p343

POWER SYSTEM PROTECTION

Analysis of sphere-rod gaps under standard lightning and switching impulse voltages **SMT** p11
Behaviour of positive conductor-rod gaps stressed by impulse voltages in atmospheric air **SMT** p209
Calculation of losses in conductors due to chopped impulse currents, taking the skin effect into account **SMT** p111
Earthing effects of coated underground cables with metallic shields bonded to earth electrodes **GTD** p26
Influence of earth connection on the operation of railway track circuits **EPA** p215
On-line dynamic-security contingency screening and ranking **GTD** p132
Phase co-ordinate approach to calculate earth-fault current and shock voltage **EPA** p441
Probabilistic approach for fault-section estimation in power systems based on a refined genetic algorithm **GTD** p160
Review of claimed enhanced lightning protection of buildings by early streamer emission air terminals **SMT** p1
Tabu search approach to alarm processing in power systems **GTD** p31
Voltage stability: significance of load characteristics and current limiters **GTD** p257

POWER SYSTEMS AND APPLICATIONS

Analysis and design of a three-level PWM converter system for railway-traction applications **EPA** p357
Analysis and simulation of a high-speed two-phase AC drive for aerospace applications **EPA** p149
Analysis of neural and fuzzy-power electronic control **SMT** p25
Analytical solution to harmonic characteristics of traction PWM converters **EPA** p158
Characterisation of radio frequency heating systems in industry using a network analyser **SMT** p215
Digital algorithms for measurement of voltage flicker **GTD** p175
Driving circuit for ultrasonic motor servo drive with variable-structure adaptive model-following control **EPA** p199
Effects of flux level on a CSI-fed field-oriented induction motor **EPA** p295
Electrical characterisation of domestic refrigeration compressors **SMT** p123
Electrical stresses applied to stator insulation in low-voltage induction motors fed by PWM drives **EPA** p191
Estimation of speed and armature temperature in a brushed DC drive using the extended Kalman filter **EPA** p13
Estimation of speed, stator temperature and rotor temperature in cage induction motor drive using the extended Kalman filter algorithm **EPA** p301
Field measurements study into the potential effects of ISM emissions on cellular radio equipment **SMT** p134
Full fuzzy control of a DSP-based high performance induction motor drive **CTA** p361
H∞ control for a sensorless permanent-magnet synchronous drive **EPA** p173
Harmonic worst-case identification and filter optimal design of MRT systems using genetic algorithms **EPA** p372
Implementation of intelligent self-organising controllers in DSP controlled electromechanical drives **CTA** p324
Indirect field-oriented induction motor drive with fuzzy detuning correction and efficiency optimisation controls **EPA** p37
Influence of earth connection on the operation of railway track circuits **EPA** p215
Modelling and numerical solution of multibranched DC rail traction power systems [comment and reply] **EPA** p74
Optimising train movements through coast control using genetic algorithms **EPA** p65
Robust PM synchronous motor servo drive with variable-structure model-output-following control **EPA** p317
Sliding mode and fuzzy control of toggle mechanism using PM synchronous servomotor drive **CTA** p393
Stator resistance voltage-drop compensation for open-loop AC drives **EPA** p21

POWER SYSTEMS AND PLANTS

Active power filter with sliding mode control **GTD** p564
Analysis and design of a three-level PWM converter system for railway-traction applications **EPA** p357
Analysis and simulation of a high-speed two-phase AC drive for aerospace applications **EPA** p149
Analysis of neural and fuzzy-power electronic control **SMT** p25
Analytical solution to harmonic characteristics of traction PWM converters **EPA** p158
Application of artificial neural networks to the dynamic analysis of the voltage stability problem **GTD** p371
Application of Kalman filtering for continuous real-time tracking of power system harmonics **GTD** p13
Application of sequential Monte Carlo simulation to evaluation of distributions of composite system indices **GTD** p87
Artificial intelligence algorithms for short term scheduling of thermal generators and pumped-storage **GTD** p193
Bounding method based on generalised real power distribution factors **GTD** p249
Capacitor placement in distribution systems using heuristic search strategies **GTD** p225
Characterisation of radio frequency heating systems in industry using a network analyser **SMT** p215
Classification of partial discharge sources in gas-insulated substations using novel preprocessing strategies **SMT** p17
Composite system adequacy assessment using sequential Monte Carlo simulation with variance reduction techniques [power networks] **GTD** p1
Comprehensive algorithm for hydrothermal coordination **GTD** p482

Data visualisation and identification of anomalies in power system state estimation using artificial neural networks **GTD** p445
Decomposition approach to unit commitment with reactive constraints **GTD** p113
Development of an energy function reflecting the transfer conductances for direct stability analysis in power systems **GTD** p503
Development of constrained-genetic-algorithm load-flow method **GTD** p91
Digital algorithms for measurement of voltage flicker **GTD** p175
Driving circuit for ultrasonic motor servo drive with variable-structure adaptive model-following control **EPA** p199
Earthing effects of coated underground cables with metallic shields bonded to earth electrodes **GTD** p26
Effect of minor harmonics on the performance of resonant harmonic filters in distribution systems **EPA** p349
Effects of flux level on a CSI-fed field-oriented induction motor **EPA** p295
Electrical characterisation of domestic refrigeration compressors **SMT** p123
Electrical stresses applied to stator insulation in low-voltage induction motors fed by PWM drives **EPA** p191
Estimation of speed and armature temperature in a brushed DC drive using the extended Kalman filter **EPA** p13
Estimation of speed, stator temperature and rotor temperature in cage induction motor drive using the extended Kalman filter algorithm **EPA** p301
Experimental investigation of optimum thickness of a piezoelectric element for cantilever actuation **SMT** p45
Feasibility study of transient stability analysis for operator training simulators **GTD** p510
Field measurements study into the potential effects of ISM emissions on cellular radio equipment **SMT** p134
Field studies using a neural-net-based approach for fault diagnosis in distribution networks **GTD** p429
Fixed/switched type shunt capacitor planning of distribution systems by considering customer load patterns and simplified feeder model **GTD** p533
Full fuzzy control of a DSP-based high performance induction motor drive **CTA** p361
Fuzzy assessment of power system transient stability level based on steady-state data **GTD** p525
Fuzzy logic approach in power system fault section identification **GTD** p406
Fuzzy optimisation of capacitors in distribution systems **GTD** p415
Fuzzy rule-based expert system for power system fault diagnosis **GTD** p186
H$^{\infty}$ control for a sensorless permanent-magnet synchronous drive **EPA** p173
Harmonic worst-case identification and filter optimal design of MRT systems using genetic algorithms **EPA** p372
Hybrid approach using counterpropagation neural network for power-system network reduction **GTD** p169
Identifiability of load models [power systems] **GTD** p45
Implementation of intelligent self-organising controllers in DSP controlled electromechanical drives **CTA** p324
Improved techniques for hybrid method in fast-transient stability assessment **GTD** p107
Incremental fuzzy PI control of a solar power plant **CTA** p596
Indirect boundary integral equation method as applied for wave propagation in the stator winding of an electric machine **SMT** p223
Indirect field-oriented induction motor drive with fuzzy detuning correction and efficiency optimisation controls **EPA** p37
Influence of earth connection on the operation of railway track circuits **EPA** p215
Kohonen neural network based approach to voltage weak buses/areas identification **GTD** p340
Linear indicator for voltage collapse in power systems **GTD** p139
Look-ahead approach to power system loadability enhancement **GTD** p357
Mathematical models of a three-level advanced static VAr compensator **GTD** p201
Methodology and computer package for generation rescheduling **GTD** p301
Modelling and numerical solution of multibranched DC rail traction power systems [comment and reply] **EPA** p74
New approach for power network clustering using a representative model **GTD** p279
New concept in fault location for overhead distribution systems using superimposed components **GTD** p309
New dynamic, branch exchange method for optimal distribution system planning **GTD** p333
Newton-Raphson approach for the analysis of ferroresonant circuits **GTD** p489
Optimising train movements through coast control using genetic algorithms **EPA** p65
Parametric harmonic analysis [of power systems] **GTD** p21
Power systems fault diagnosis using Petri nets **GTD** p231
PWM-controlled series compensation with low harmonic distortion **GTD** p555
Robust decentralised design for multiple FACTS damping controllers **GTD** p61
Robust PM synchronous motor servo drive with variable-structure model-output-following control **EPA** p317
Selection of installing locations and feedback signals of FACTS-based stabilisers in multimachine power systems by reduced-order modal analysis **GTD** p263
Short-term generation scheduling of thermal units with voltage security and environmental constraints **GTD** p469
Short-term load forecasting for demand side management **GTD** p68
Short-term load forecasting using threshold autoregressive models **GTD** p477
Short-term power purchases considering uncertain prices **GTD** p423
Sliding mode and fuzzy control of toggle mechanism using PM synchronous servomotor drive **CTA** p393
Statistical study for switching processes in compensated UHV transmission systems **GTD** p237
Stator resistance voltage-drop compensation for open-loop AC drives **EPA** p21
Surrogate worth trade-off technique for multi-objective optimal power flows **GTD** p547
UHF couplers for gas-insulated substations: a calibration technique **SMT** p117
Urban underground network expansion planning **GTD** p118
Use of a saturating choke in the series capacitor compensation of distribution lines **GTD** p75
Voltage stability: significance of load characteristics and current limiters **GTD** p257

POWER TRANSMISSION AND DISTRIBUTION

Application of optimum stratified sampling and separate ratio estimation in stochastic copper loss of transmission system evaluation **GTD** p207
Bounding method based on generalised real power distribution factors **GTD** p249
Capacitor placement in distribution systems using heuristic search strategies **GTD** p225
Computer-based strategy for the restoration problem in electric power distribution systems **GTD** p389
Distribution network reconfiguration for loss reduction using fuzzy controlled evolutionary programming **GTD** p345
Distribution system voltage and reactive power control based on probabilistic load flow analysis **GTD** p363
Earthing effects of coated underground cables with metallic shields bonded to earth electrodes **GTD** p26
Effect of minor harmonics on the performance of resonant harmonic filters in distribution systems **EPA** p349
Field studies using a neural-net-based approach for fault diagnosis in distribution networks **GTD** p429
Fixed/switched type shunt capacitor planning of distribution systems by considering customer load patterns and simplified feeder model **GTD** p533
Fuzzy logic approach in power system fault section identification **GTD** p406
Fuzzy optimisation of capacitors in distribution systems **GTD** p415
Improved simulation of HVDC converter transformers in electromagnetic transient programs **GTD** p100
Improvement of network damping and transient stability by active and reactive power control **GTD** p125
Indices for selecting the best location of PSSs or FACTS-based stabilisers in multimachine power systems: a comparative study **GTD** p155
Influence of earth connection on the operation of railway track circuits **EPA** p215
Model for security of service costing in electric transmission systems **GTD** p521
New concept in fault location for overhead distribution systems using superimposed components **GTD** p309
New dynamic, branch exchange method for optimal distribution system planning **GTD** p333
Output feedback TCSC controllers to improve damping of meshed multi-machine power systems **GTD** p243
PWM-controlled series compensation with low harmonic distortion **GTD** p555
Response of underground multiconductor cable systems to external fields illumination [and reply] **SMT** p294
Robust decentralised design for multiple FACTS damping controllers **GTD** p61
Selection of installing locations and feedback signals of FACTS-based stabilisers in multimachine power systems by reduced-order modal analysis **GTD** p263
Statistical study for switching processes in compensated UHV transmission systems **GTD** p237
Surrogate worth trade-off technique for multi-objective optimal power flows **GTD** p547
Unified power flow controller: a critical comparison of Newton-Raphson UPFC algorithms in power flow studies **GTD** p437
Urban underground network expansion planning **GTD** p118
Use of a saturating choke in the series capacitor compensation of distribution lines **GTD** p75
Voltage control by tap-changing transformers for a radial distribution network **GTD** p517

PREDICTIVE CONTROL

Constrained cautious stable predictive control **CTA** p313
Generalised predictive control (GPC): a powerful control tool in medicine **CTA** p8
Implementation of a self-tuning AVR **CTA** p32
Improved algorithm for multivariable stable generalised predictive control **CTA** p309
Neural implementation of GMV control schemes based on affine input/output models **CTA** p521
Predictive analogue generator excitation controller **GTD** p271
Robust control of interval plants: a time domain method **CTA** p347
Simplified predictive instantaneous current control for single-phase and three-phase voltage-fed PFC converters **EPA** p46
True average current predictive controller for four-wire PWM reversible rectifiers **EPA** p397

PROBABILITY AND STATISTICS

3-D target feature extraction via interferometric SAR **RSN** p71
Adaptation of hidden Markov model for telephone speech recognition and speaker adaptation **VIS** p129
Adaptive decision fusion for unequiprobable sources **RSN** p105
Adaptive joint probabilistic data association algorithm for tracking multiple targets in cluttered environment **RSN** p309
Analysis and implementation of an adjustable-rate multilevel coded modulation system **COM** p1
Analysis of ATM cell loss for systems with on/off traffic sources **COM** p129
Application of optimum stratified sampling and separate ratio estimation in stochastic copper loss of transmission system evaluation **GTD** p207
Application of sequential Monte Carlo simulation to evaluation of distributions of composite system indices **GTD** p87
Bayesian approach to parameter estimation and interpolation of time-varying autoregressive processes using the Gibbs sampler **VIS** p249
Block algorithms for the parametric estimation of signals and systems **VIS** p257
Calculating the expected synchronisation delay for T-code sets **COM** p121
CFAR detection for Weibull and other log-log-linear tail clutter distributions **RSN** p64
Cluster design of M-ary orthogonal DS/CDMA cellular system with Rayleigh fading and lognormal shadowing **COM** p265
Combined techniques for channel allocation algorithms in mobile radio systems **COM** p205
Composite system adequacy assessment using sequential Monte Carlo simulation with variance reduction techniques [power networks] **GTD** p1
Computer model for analysing digital magnetic recording systems **COM** p289
Continuously distributed phase shifts by chirped distributed-feedback gratings for 1.55 μm distributed-feedback lasers **OPT** p256
Cycle-slipping probability of first-order phase-locked loop using transient analysis **COM** p357
Detecting anisotropic scattering with hidden Markov models **RSN** p81
Development of the Laycock-Gott occupancy model **COM** p33
Distribution system voltage and reactive power control based on probabilistic load flow analysis **GTD** p363
Effect of skywave interference on coverage of radiobeacon DGPS stations **RSN** p163
Efficient loss-of-load cost evaluation by combined pseudo-sequential and state transition simulation **GTD** p147
Environmental/economic dispatch using fuzzy logic controlled genetic algorithms **GTD** p377
Error performance of circular 16-DAPSK with postdetection diversity reception in Rayleigh fading channels **COM** p180
Estimation-based call admission control with delay and loss guarantees in ATM networks **COM** p85
Estimation of autoregressive signals from noisy measurements **VIS** p39

Evaluation of fractional, lower-order statistics-based detection algorithms on real radar sea-clutter data **RSN** p29
Evaluation of multiple diffraction integrals: computational speed and accuracy considerations **MAP** p35
Evaluation of the power spectral density of guided scrambling coded sequences **COM** p70
Extracting the cliques from a neighbourhood system **VIS** p168
High resolution sea clutter data: statistical analysis of recorded live data **RSN** p121
Hybrid procedure for CFAR in non-Gaussian clutter **RSN** p361
Identification of cubically nonlinear systems using undersampled data **VIS** p267
Improved numerical simulation of electromagnetic wave scattering from perfectly conducting random surfaces **MAP** p256
Intelligent signal processing of evoked potentials for anaesthesia monitoring and control **CTA** p354
Loss periods in ATM output multiplexer **COM** p301
Markov analysis of multichannel star-connected network with channel sensing and collision detection **COM** p331
Maximum a posteriori spatial probability segmentation **VIS** p161
Maximum-likelihood ISAR image autofocusing technique based on instantaneous frequency estimation **RSN** p284
Microwave intercept receiver sensitivity estimation **RSN** p186
Model order selection for the singular value decomposition and the discrete Karhunen-Loeve transform using a Bayesian approach **VIS** p116
Modelling 1-D signals using Hermite basis functions **VIS** p345
Modelling multimedia traffic over ATM using MMBP **COM** p307
Modified multiple stack algorithm for decoding convolutional codes **COM** p221
Numerically stable algorithm for computing Wigner-Ville distribution **VIS** p46
Performance analysis based on co-channel interference statistics of indoor CDMA systems with RAKE receiver and power control under multipath fading **COM** p173
Performance analysis of delay-loss priority mechanism using Markov modulated arrival stream **COM** p311
Performance analysis of noncoherent DS-CDMA systems in a Nakagami fading channel with arbitrary parameters **COM** p166
Performance analysis of space-priority mechanisms in an input and output queueing ATM switch **COM** p229
Performance of binary CPM schemes in frequency selective fading channels with pilot symbol assisted detection **COM** p191
Pollaczek-Khinchin formula for the M/G/1 queue in discrete time with vacations **CDT** p222
Probabilistic approach for fault-section estimation in power systems based on a refined genetic algorithm **GTD** p160
Radar target discrimination using a hybrid E-pulse fourth-order moments technique **RSN** p355
Robust monoparametric multiradar CFAR detection against non-Gaussian spiky clutter **RSN** p131
Robust rotation-invariant texture classification: wavelet, Gabor filter and GMRF based schemes **VIS** p180
S-class of time-frequency distributions **VIS** p57
Short-term load forecasting using threshold autoregressive models **GTD** p477
Similarity measure for superquadrics **VIS** p237
Simulation and analysis of synthetic sidescan sonar images **RSN** p219
Simulation studies of moving-target detection: a new approach with Wigner-Ville distribution **RSN** p259
Software library for analysing M/G/1-type systems and its application in computer network performance evaluation **COM** p237
Statistical analysis of the eigenvector projection method for adaptive spatial filtering of interference **RSN** p57
Statistical study for switching processes in compensated UHV transmission systems **GTD** p237
Sub-optimum coherent radar detection in a mixture of K-distributed and Gaussian clutter **RSN** p39
Sub-pixel non-parametric PSF estimation for image enhancement **VIS** p285
Subspecies analysis of partial discharge data from a generator stator conductor **SMT** p287
Subsyllable-based discriminative segmental Bayesian network for Mandarin speech keyword spotting **VIS** p65
Threshold decision technique for direct sequence code synchronisation in a fading mobile channel **COM** p155
Total TCAD strategy for DFM in IC technology development **SMT** p63
Two-stage nonlinear detector in DS/SSMA communications with impulse noise **COM** p387
Two subspace-based methods for frequency estimation of sinusoidal signals with random amplitude **RSN** p169
Wavelet transforms on vector spaces as a method of multispectral image characterisation **VIS** p89
Weibull raindrop-size distribution and its application to rain attenuation **MAP** p197
Zero-forcing equalisation for space diversity combining in microwave digital radio **COM** p107

PRODUCTION ENGINEERING

AlGaInP multiquantum well light-emitting diodes **OPT** p405
Application of sequential Monte Carlo simulation to evaluation of distributions of composite system indices **GTD** p87
Assessing and comparing fault coverage when testing analogue circuits **CDS** p1
Automated parameter extraction for ultrasonic flaw analysis **SMT** p93
Constrained time-efficient and smooth cubic spline trajectory generation for industrial robots **CTA** p467
Eddy current losses and hot-spot evaluation in cover plates of power transformers **EPA** p435
Effects of 'overmakes' on company performance **SMT** p57
Efficient loss-of-load cost evaluation by combined pseudo-sequential and state transition simulation **GTD** p147
March U: a test for unlinked memory faults **CDS** p155
Model for security of service costing in electric transmission systems **GTD** p521
On-line adaptive control in the hot rolling of steel **CTA** p15
Optimal planning technique with a fuzzy co-ordinator for an intelligent robot's part assembly **CTA** p45
Reduced-order estimator for closed-loop online estimation of cross-directional parameters in a plastics extrusion process **CTA** p549
Reliability concept for electric fuses **SMT** p87
Self-tuning control of an industrial pilot-scale reheating furnace: Design principles and application of a bilinear approach **CTA** p25
Testability aspects of folded source-coupled logic **CDS** p361
Thermal design of gallium arsenide MESFETs for microwave power amplifiers **CDS** p45
Total TCAD strategy for DFM in IC technology development **SMT** p63
Trireflector compact antenna test range **MAP** p305

PROGRAMMING THEORY

Analysis of delays in converting from a redundant representation **CDT** p219
Block momentum-LMS algorithm based on the method of parallel tangents **VIS** p49
Comparison of dynamic and static load-balancing strategies in heterogeneous distributed systems **CDT** p100
Dynamic systems reliability evaluation using uncertainty techniques for performance monitoring **CTA** p103
Edge oriented block motion estimation for video coding **VIS** p136
Global linear complexity analysis of filter keystream generators **CDT** p33
High performance hardware accelerator for design-error simulation **CDS** p81
Inversion of cellular automata iterations **CDT** p279
Numerically stable algorithm for computing Wigner-Ville distribution **VIS** p46
Optimum partitioning problem for rectilinear VLSI layout **CDT** p155
Parallel logic simulation with assignable delays on a vector multiprocessor computer **CDS** p5
Planar constrained terminals over-the-cell router **CDT** p121
Predictable distributed dynamic scheduling in RTDOS **CDT** p195
Predicting the complexity of large combinational circuits through symbolic spectral analysis of their functional specifications **CDT** p343

QUANTUM OPTICS

Advances in high resolution distributed temperature sensing using the time-correlated single photon counting technique **OPT** p183

RADAR AND RADIONAVIGATION

3-D target feature extraction via interferometric SAR **RSN** p71
Adaptive update rate tracking using IMM nearest neighbour algorithm incorporating rapid re-looks **RSN** p195
Detecting anisotropic scattering with hidden Markov models **RSN** p81
Digital charting: a Royal Navy navigator's view **RSN** p143
Instrumental delay calibration with zero baseline interferometry for VLBI time comparison **SMT** p181
Microwave intercept receiver sensitivity estimation **RSN** p186
Millimetre wave leaky wave antenna using an H-guide loaded with a corrugated ferrite **MAP** p443
Prediction of the electromagnetic performance of large ground-based impedance-loaded dielectric space-frame radomes **RSN** p9
Simple design of dual-beam leaky-wave antennas in microstrips **MAP** p397
Simultaneous signals in IFM receivers **RSN** p181
Space-time adaptive processing for airborne radar with various array orientations **RSN** p330
Synthesis and analysis of a dual-reflector feed for the radiotelescope in Nancay **MAP** p289
Target angular motion effects on ISAR imaging **RSN** p87
Technique for predicting the electromagnetic performance of impedance-loaded dielectric space-frame radome components **RSN** p1
VSAR: a high resolution radar system for detection of moving targets **RSN** p205

RADAR CLUTTER

Adaptive joint probabilistic data association algorithm for tracking multiple targets in cluttered environment **RSN** p309
Adaptive update rate tracking using IMM nearest neighbour algorithm incorporating rapid re-looks **RSN** p195
CFAR binary integration detection in nonhomogeneous partially correlated clutter **RSN** p293
CFAR detection for Weibull and other log-log-linear tail clutter distributions **RSN** p64
Evaluation of fractional, lower-order statistics-based detection algorithms on real radar sea-clutter data **RSN** p29
High resolution sea clutter data: statistical analysis of recorded live data **RSN** p121
Hybrid procedure for CFAR in non-Gaussian clutter **RSN** p361
New time-domain clutter-lock algorithm **RSN** p341
Robust monoparametric multiradar CFAR detection against non-Gaussian spiky clutter **RSN** p131
Simulation studies of moving-target detection: a new approach with Wigner-Ville distribution **RSN** p259
Space-time adaptive processing for airborne radar with various array orientations **RSN** p330
Sub-optimum coherent radar detection in a mixture of K-distributed and Gaussian clutter **RSN** p39
VSAR: a high resolution radar system for detection of moving targets **RSN** p205

RADAR THEORY

3-D target feature extraction via interferometric SAR **RSN** p71
Adaptive joint probabilistic data association algorithm for tracking multiple targets in cluttered environment **RSN** p309
Adaptive update rate tracking using IMM nearest neighbour algorithm incorporating rapid re-looks **RSN** p195
CFAR binary integration detection in nonhomogeneous partially correlated clutter **RSN** p293
CFAR detection for Weibull and other log-log-linear tail clutter distributions **RSN** p64
Comments on "Systematic errors in ground referenced geometric height monitoring" **RSN** p377
Compression of SAR images using KLT, VQ and mixture of principal components **RSN** p113
Detecting anisotropic scattering with hidden Markov models **RSN** p81
Evaluation of fractional, lower-order statistics-based detection algorithms on real radar sea-clutter data **RSN** p29
High resolution sea clutter data: statistical analysis of recorded live data **RSN** p121
Hybrid procedure for CFAR in non-Gaussian clutter **RSN** p361
IMMJPDA versus MHT and Kalman filter with NN correlation: performance comparison **RSN** p49
Interferometric SAR phase unwrapping using the finite element method **RSN** p266
Maximum-likelihood ISAR image autofocusing technique based on instantaneous frequency estimation **RSN** p284
Microwave intercept receiver sensitivity estimation **RSN** p186
New time-domain clutter-lock algorithm **RSN** p341
Radar target discrimination using a hybrid E-pulse fourth-order moments technique **RSN** p355

Robust monoparametric multiradar CFAR detection against non-Gaussian spiky clutter **RSN** p131
Simulation studies of moving-target detection: a new approach with Wigner-Ville distribution **RSN** p259
Simultaneous signals in IFM receivers **RSN** p181
Space-time adaptive processing for airborne radar with various array orientations **RSN** p330
Statistical modelling of ocean SAR images **RSN** p348
Sub-optimum coherent radar detection in a mixture of K-distributed and Gaussian clutter **RSN** p39
Target angular motion effects on ISAR imaging **RSN** p87
Two subspace-based methods for frequency estimation of sinusoidal signals with random amplitude **RSN** p169
Use of curvilinear SAR for three-dimensional target feature extraction **RSN** p275
VSAR: a high resolution radar system for detection of moving targets **RSN** p205

RADIO DIRECTION-FINDING

Comparison of the ultimate direction-finding capabilities of a number of planar array geometries **RSN** p321
Digital charting: a Royal Navy navigator's view **RSN** p143
Direction finding on spread-spectrum signals using the time-domain filtered cross spectral density **RSN** p315
Effect of skywave interference on coverage of radiobeacon DGPS stations **RSN** p163
Efficient technique to fix GPS carrier phase integer ambiguity on-the-fly **RSN** p148
Global navigation satellite system in an integrated air traffic management constellation **RSN** p156
Large HF bearing errors for propagation paths contained within the polar cap **MAP** p241
Large HF bearing errors for propagation paths tangential to auroral oval **MAP** p91
User position estimation for search and rescue using satellite in LEO constellation **RSN** p22

RADIO SYSTEMS

Adaptive location management scheme for global personal communications **COM** p54
Analysis of uplink and downlink capacities for two-tier cellular system **COM** p405
Application of mathematical programming to the fixed channel assignment problem in mobile radio networks **COM** p257
Automatic removal of Cartesian feedback transmitter imperfections **COM** p281
Biorthogonal pulse position modulated direct-sequence CDMA for wireless local communications **COM** p40
Cellular CDMA overlay situations **COM** p402
Cluster design of M-ary orthogonal DS/CDMA cellular system with Rayleigh fading and lognormal shadowing **COM** p265
Combined techniques for channel allocation algorithms in mobile radio systems **COM** p205
Constructing quasi-optimal subfamilies of GMW sequences suitable for CDMA applications **COM** p99
Design of loop antennas and matching networks for low-noise RF receivers: analytic formula approach **MAP** p274
Direction finding on spread-spectrum signals using the time-domain filtered cross spectral density **RSN** p315
Distortion effects of multicarrier envelope limiting **COM** p349
Effect of skywave interference on coverage of radiobeacon DGPS stations **RSN** p163
Efficient technique to fix GPS carrier phase integer ambiguity on-the-fly **RSN** p148
Engineering of a CDMA radio uplink for a mobile radio demonstration system **COM** p341
Error performance of circular 16-DAPSK with postdetection diversity reception in Rayleigh fading channels **COM** p180
Explicit loss indication and accurate RTO estimation for TCP error recovery using satellite links **COM** p47
Field measurements study into the potential effects of ISM emissions on cellular radio equipment **SMT** p134
Global navigation satellite system in an integrated air traffic management constellation **RSN** p156
Hidden preamble detector for acquisition of frequency hopping multiple-access communication system **COM** p161
Lattice Boltzmann method for wave propagation in urban microcells **MAP** p251
Multirate coding for mobile communications link adaptation **COM** p211
Observations of Doppler spreading on HF signals propagating over high latitude paths **MAP** p215
Performance analysis based on co-channel interference statistics of indoor CDMA systems with RAKE receiver and power control under multipath fading **COM** p173
Performance analysis of noncoherent DS-CDMA systems in a Nakagami fading channel with arbitrary parameters **COM** p166
Performance of binary CPM schemes in frequency selective fading channels with pilot symbol assisted detection **COM** p191
Polarisation-diversity phase-encoded patch-antenna transponder **MAP** p201
Rain-induced crosspolarisation on line-of-sight systems at 38 GHz **MAP** p20
Results from clear-air propagation studies on Franco-UK paths at 1.3 and 11 GHz **MAP** p267
Signal detection over Rayleigh-fading channels with non-Gaussian noise **COM** p381
Small improvements in half-rate convolutional codes with popular constraint lengths for applications in satellite communications **COM** p199
Spreading code protocol enabling programmable complexity/performance for CDMA local wireless networks **COM** p395
Threshold decision technique for direct sequence code synchronisation in a fading mobile channel **COM** p155
Two-stage nonlinear detector in DS/SSMA communications with impulse noise **COM** p387
User position estimation for search and rescue using satellite in LEO constellation **RSN** p22
UTD-based model for prediction of propagation path loss and shadowing variability in urban mobile environments **MAP** p367
VLF wave generation using VLF heating: a pointer to a new technique for ELF wave production? **MAP** p153
Weibull raindrop-size distribution and its application to rain attenuation **MAP** p197
Wideband TM_{01}-mode travelling wave coupler **MAP** p315
Zero-forcing equalisation for space diversity combining in microwave digital radio **COM** p107

RADIOWAVE PROPAGATION

Development of the Laycock-Gott occupancy model **COM** p33
Effect of skywave interference on coverage of radiobeacon DGPS stations **RSN** p163
Evaluation of multiple diffraction integrals: computational speed and accuracy considerations **MAP** p35
High frequency spectral occupancy at the solstices **COM** p24
Large HF bearing errors for propagation paths contained within the polar cap **MAP** p241
Large HF bearing errors for propagation paths tangential to auroral oval **MAP** p91
Lattice Boltzmann method for wave propagation in urban microcells **MAP** p251
Measured and modelled scattering properties of simulated particles of granular and spongy hail at microwave and millimetre-wave frequencies **MAP** p27
Modelling and measurement of UHF radio propagating through floors in a multifloored building **MAP** p359
Observations of Doppler spreading on HF signals propagating over high latitude paths **MAP** p215
Rain-induced crosspolarisation on line-of-sight systems at 38 GHz **MAP** p20
Results from clear-air propagation studies on Franco-UK paths at 1.3 and 11 GHz **MAP** p267
UTD-based model for prediction of propagation path loss and shadowing variability in urban mobile environments **MAP** p367
Weibull raindrop-size distribution and its application to rain attenuation **MAP** p197

SELF-ADJUSTING SYSTEMS

Adaptive control scheme using real time tuning of the parameter estimator **CTA** p241
Adaptive integral control of time-delay systems **CTA** p531
Adaptive performance/robust control design for discrete systems **CTA** p95
Autotuning temperature control using identification by multifrequency binary sequences **CTA** p233
Co-ordinated control of multiple robotic manipulators handling a common object–theory and experiments **CTA** p73
Discrete-time model reference adaptive control for nonminimum phase systems with disturbances using approximate inverse systems **CTA** p447
Driving circuit for ultrasonic motor servo drive with variable-structure adaptive model-following control **EPA** p199
Expert adaptive control applied to turbogenerator systems **CTA** p2
Fourier series neural network-based adaptive variable structure control for servo systems with friction **CTA** p559
Generalised predictive control (GPC): a powerful control tool in medicine **CTA** p8
Implementation of a self-tuning AVR **CTA** p32
Implementation of intelligent self-organising controllers in DSP controlled electromechanical drives **CTA** p324
Learning issues in model reference based fuzzy control **CTA** p605
LQG approach for the high-precision track control of ships **CTA** p121
Model reference adaptive control of dynamic output feedback linearisable systems with unknown high frequency gain **CTA** p427
Nonlinear internal model control using local model networks **CTA** p505
On-line adaptive control in the hot rolling of steel **CTA** p15
pH control: handling nonlinearity and deadtime with fuzzy relational model-based control **CTA** p263
Robust model-following control for a robot manipulator **CTA** p53
Robust output tracking for MIMO nonlinear systems: an adaptive fuzzy systems approach **CTA** p537
Robust PM synchronous motor servo drive with variable-structure model-output-following control **EPA** p317
Robust self-tuning rotated fuzzy basis function controller for robot arms **CTA** p293
Robust speed control of brushless DC motor using adaptive input-output linearisation technique **EPA** p469
Self-tuning control of an industrial pilot-scale reheating furnace: Design principles and application of a bilinear approach **CTA** p25
Variable structure adaptive control of robot manipulators **CTA** p167

SEMICONDUCTOR DEVICE MODELLING

Analysis of vertical and in-plane spontaneous emission in large diameter VCSELs **OPT** p39
Auger recombination in strained quantum well InAlAsSb/GaSb structures for 3-4 μm lasers **OPT** p336
Carrier density depinning above threshold in semiconductor lasers: effects of carrier heating and spectral hole burning **OPT** p209
Carrier diffusion inside active regions of gain-guided vertical-cavity surface-emitting lasers **OPT** p421
Carrier dynamics model of fast refractive index changes in semiconductor laser amplifiers **OPT** p189
Complex general Fourier variational method applied to the analysis of semiconductor lasers **OPT** p241
Effect of optical feedback on fast modulated semiconductor lasers **OPT** p30
Effect of optical feedback on the noise properties of vertical cavity surface emitting lasers **OPT** p34
Electromagnetic investigation on the propagation in distributed active devices **MAP** p281
GaAs MESFET large-signal modelling for multiport Volterra series analysis **CDS** p40
Influence of laser parameters and unpumped regions near the facets on the power level for catastrophic optical damage in short wavelength lasers **OPT** p109
Injection-locking properties of self pulsation in semiconductor lasers **OPT** p228
Intervalence band absorption in bulk InSb lasers **OPT** p299
Investigation of step-doped channel heterostructure field-effect transistor **CDS** p309
Mathematical modelling of thermal effects in semiconductor laser operation **OPT** p389
Modulation bandwidth optimisation for unipolar intersubband semiconductor lasers **OPT** p44
Optimisation of bistable quantum well IR phototransistors **OPT** p283
Self-consistent simulation of (AlGa)InP/GaInP visible lasers **OPT** p23
Semiconductor laser linewidth from the transmission-line laser model **OPT** p246
Sensitivity analysis of the optical-waveguide properties of quantum cascade lasers **OPT** p323
Surface plasmon effects and waveguide properties of quantum cascade lasers **OPT** p48
Theory of quantum well IR photodetectors with tunnelling electron injection **OPT** p343
Waveform distortion in a gain-saturated semiconductor optical amplifier for NRZ and Manchester formats **OPT** p433

SEMICONDUCTOR DEVICES AND MATERIALS

Active power filter with sliding mode control **GTD** p564
AlGaInP multiquantum well light-emitting diodes **OPT** p405
Auger recombination in strained quantum well InAlAsSb/GaSb structures for 3-4 μm lasers **OPT** p336
Carrier diffusion inside active regions of gain-guided vertical-cavity surface-emitting lasers **OPT** p421
Charge oscillations in coupled quantum wells **OPT** p120
Design and evaluation of a novel enhancement mode FET logic gate configuration in AlGaAs/GaAs/AlGaAs quantum well HEMT technology **CDS** p243
Design considerations for the series-connected single-switch phase shifter **MAP** p467
Electromagnetic investigation on the propagation in distributed active devices **MAP** p281
Fabrication and coupling-to-fibre characteristics of laser diodes integrated with a spot-size converter having a lateral taper **OPT** p104
GaAs MESFET large-signal modelling for multiport Volterra series analysis **CDS** p40
Growth and characterisation of mid-IR $InAs_{0.9}Sb_{0.1}$-InAs strained multiple quantum well light emitting diodes grown on InAs substrates **OPT** p295
Improved PIN diode circuit model with automatic parameter extraction technique **CDS** p329
In(As,Sb) superlattice-based emitters for mid-IR wavelengths **OPT** p262
Investigation of step-doped channel heterostructure field-effect transistor **CDS** p309
Losses in PWM converters using IGBTs: on the effect of bus-clamping on the distortion of the AC-side currents **EPA** p169
Minimisation of base transit time in AlGaAs/GaAs heterostructure bipolar transistor (HBT) **CDS** p375
Optimisation of bistable quantum well IR phototransistors **OPT** p283
Optimised input filter design and low-loss switching techniques for a practical matrix converter **EPA** p53
Photolithographic method for producing metal-dissolved diffractive structures in As-S glasses **OPT** p426
Quality investigation of joint of bipolar transistor chip and lead frame by thermal wave method **CDS** p78
Quasi-TE_{00} single-mode optical waveguides for electro-optical modulation at 1.3 μm using standard SIMOX material **OPT** p83
Reduced-power semiconductor all-optical switch design **OPT** p2
Schottky barrier diodes from semiconducting polymers **CDS** p117
Sensitivity analysis of the optical-waveguide properties of quantum cascade lasers **OPT** p323
Single-phase matrix converter **EPA** p235
Single-phase step-up/down rectifier with improved supply current waveform **EPA** p6
Space charge induced variation in silicon double drift IMPATT diode parameters **CDS** p36
Switching loss minimised space vector PWM method for IGBT three-level inverter **EPA** p182
Theory of quantum well IR photodetectors with tunnelling electron injection **OPT** p343

SEMICONDUCTOR LASERS

Analysis of vertical and in-plane spontaneous emission in large diameter VCSELs **OPT** p39
Auger recombination in strained quantum well InAlAsSb/GaSb structures for 3-4 μm lasers **OPT** p336
Carrier density depinning above threshold in semiconductor lasers: effects of carrier heating and spectral hole burning **OPT** p209
Carrier diffusion inside active regions of gain-guided vertical-cavity surface-emitting lasers **OPT** p421
Carrier dynamics model of fast refractive index changes in semiconductor laser amplifiers **OPT** p189
Characteristics of tapered rib-waveguides for high power semiconductor optical sources **OPT** p8
Complex general Fourier variational method applied to the analysis of semiconductor lasers **OPT** p241
Computationally efficient analysis of buried waveguides with applications to semiconductor lasers **OPT** p14
Continuously distributed phase shifts by chirped distributed-feedback gratings for 1.55 μm distributed-feedback lasers **OPT** p256
Effect of optical feedback on fast modulated semiconductor lasers **OPT** p30
Effect of optical feedback on the noise properties of vertical cavity surface emitting lasers **OPT** p34
Fabrication and coupling-to-fibre characteristics of laser diodes integrated with a spot-size converter having a lateral taper **OPT** p104
Influence of laser parameters and unpumped regions near the facets on the power level for catastrophic optical damage in short wavelength lasers **OPT** p109
Injection-locking properties of self pulsation in semiconductor lasers **OPT** p228
Intervalence band absorption in bulk InSb lasers **OPT** p299
Lossless operation of 4×4 laser diode optical gate switches using Y reflection type branching/combining circuits for large-scale integration **OPT** p61
Mathematical modelling of thermal effects in semiconductor laser operation **OPT** p389
Modulation bandwidth optimisation for unipolar intersubband semiconductor lasers **OPT** p44
Multiple output semiconductor ring lasers with high external quantum efficiency **OPT** p19
Nearly perfect output power saturation of the semiconductor Raman laser **OPT** p87
Novel materials and device design by metal-organic chemical vapour deposition for use in IR emitters **OPT** p271
Self-consistent simulation of (AlGa)InP/GaInP visible lasers **OPT** p23
Semiconductor laser linewidth from the transmission-line laser model **OPT** p246
Sensitivity analysis of the optical-waveguide properties of quantum cascade lasers **OPT** p323
Stimulated IR emission by quantum magnetoelectric photoeffect of narrow-gap semiconductors **OPT** p305
Strained GaInAs quantum well mid-IR emitters **OPT** p360
Surface plasmon effects and waveguide properties of quantum cascade lasers **OPT** p48
Waveform distortion in a gain-saturated semiconductor optical amplifier for NRZ and Manchester formats **OPT** p433

SIGNAL DETECTION

Comparison of the ultimate direction-finding capabilities of a number of planar array geometries **RSN** p321
Direction finding on spread-spectrum signals using the time-domain filtered cross spectral density **RSN** p315
Effect of bandlimiting filters on multidimensional digital communication system in Gaussian noise **COM** p150
Error performance of circular 16-DAPSK with postdetection diversity reception in Rayleigh fading channels **COM** p180
Hidden preamble detector for acquisition of frequency hopping multiple-access communication system **COM** p161
Logic synthesis of a PLL phase frequency detector **CDT** p381
New multiuser detector for asynchronous CDMA **COM** p336
Novel synchronous CDMA multiuser detection scheme: orthogonal decision-feedback detection and its performance study **COM** p275
Performance of binary CPM schemes in frequency selective fading channels with pilot symbol assisted detection **COM** p191
Signal detection over Rayleigh-fading channels with non-Gaussian noise **COM** p381
Threshold decision technique for direct sequence code synchronisation in a fading mobile channel **COM** p155

SIGNAL GENERATORS

Digital sinusoidal oscillator with low and uniform frequency spacing **CDS** p185
Mode change analysis of a two element oscillator-type antenna array **MAP** p483
Polarisation-diversity phase-encoded patch-antenna transponder **MAP** p201
Self-generating clock using an augmented distribution network **CDS** p219
Simple voltage generator for producing well-defined nanosecond pulses of amplitudes in excess of 1 kV **SMT** p229
Synthesis of single-resistance-controlled oscillators using CFOAs: simple state-variable approach **CDS** p104

SIGNAL PROCESSING

3-D target feature extraction via interferometric SAR **RSN** p71
Adaptive decision fusion for unequiprobable sources **RSN** p105
Adaptive joint probabilistic data association algorithm for tracking multiple targets in cluttered environment **RSN** p309
Adaptive multiresolution analysis based evoked potential filtering **SMT** p149
Adaptivity of a real-symmetric array by DOA estimation and null steering **RSN** p245
Array pattern synthesis and robust beamforming for a complex sonar system **RSN** p370
Bayesian approach to parameter estimation and interpolation of time-varying autoregressive processes using the Gibbs sampler **VIS** p249
Block algorithms for the parametric estimation of signals and systems **VIS** p257
Block momentum-LMS algorithm based on the method of parallel tangents **VIS** p49
Cellular CDMA overlay situations **COM** p402
CFAR binary integration detection in nonhomogeneous partially correlated clutter **RSN** p293
CFAR detection for Weibull and other log-log-linear tail clutter distributions **RSN** p64
Comparison of the ultimate direction-finding capabilities of a number of planar array geometries **RSN** p321
Consistent parameter estimation of systems disturbed by correlated noise **CTA** p40
Critique of the paper 'Novel design of arithmetic coding for data compression' **CDT** p394
Design methodology for the implementation of multidimensional circular convolution **CDS** p324
Designing a fuzzy step size LMS algorithm **VIS** p261
Direct reconstruction method for wavelet transform extrema representation **VIS** p193
Direction finding on spread-spectrum signals using the time-domain filtered cross spectral density **RSN** p315
Direction-of-arrival and frequency estimations for narrowband sources using two single rotation invariance algorithms with the marked subspace **RSN** p234
Effect of bandlimiting filters on multidimensional digital communication system in Gaussian noise **COM** p150
Effects of motion on adaptive arrays **RSN** p15
Efficient weighted least-squares algorithm for the design of FIR filters **VIS** p244
Error performance of circular 16-DAPSK with postdetection diversity reception in Rayleigh fading channels **COM** p180
Estimation of autoregressive signals from noisy measurements **VIS** p39
Estimation of speed, stator temperature and rotor temperature in cage induction motor drive using the extended Kalman filter algorithm **EPA** p301
Evaluation of fractional, lower-order statistics-based detection algorithms on real radar sea-clutter data **RSN** p29
Evaluation of the power spectral density of guided scrambling coded sequences **COM** p70
Finite wordlength effects in two-dimensional multirate periodically time-varying filters **CDS** p277
Full fuzzy control of a DSP-based high performance induction motor drive **CTA** p361
Generic systolic array for genetic algorithms **CDT** p107
Hidden preamble detector for acquisition of frequency hopping multiple-access communication system **COM** p161
High resolution sea clutter data: statistical analysis of recorded live data **RSN** p121
Hybrid procedure for CFAR in non-Gaussian clutter **RSN** p361
Identification of cubically nonlinear systems using undersampled data **VIS** p267
IMMJPDA versus MHT and Kalman filter with NN correlation: performance comparison **RSN** p49
Improving the accuracy of the rotor resistance estimate for vector-controlled induction machines **EPA** p285
Intelligent signal processing of evoked potentials for anaesthesia monitoring and control **CTA** p354
IQML algorithm for multiple signal parameter estimation **RSN** p237
Lattice filters based on the delta operator **VIS** p125
Microwave intercept receiver sensitivity estimation **RSN** p186
Model order selection for the singular value decomposition and the discrete Karhunen-Loeve transform using a Bayesian approach **VIS** p116
Modelling 1-D signals using Hermite basis functions **VIS** p345
New multiuser detector for asynchronous CDMA **COM** p336
New time-domain clutter-lock algorithm **RSN** p341
Nonlinear filters for linear signal models **CTA** p281
Novel synchronous CDMA multiuser detection scheme: orthogonal decision-feedback detection and its performance study **COM** p275
Numerically stable algorithm for computing Wigner-Ville distribution **VIS** p46
Optimisation of signal-to-noise ratio in an optical current measurement system using different detection schemes **SMT** p175
Parallel pipeline implementation of wavelet transforms **VIS** p355

PC-based real-time active sonar simulator **RSN** p227
Performance evaluation of an algorithm for multiple target angle tracking **RSN** p252
Performance of binary CPM schemes in frequency selective fading channels with pilot symbol assisted detection **COM** p191
Properties and methods of calculating generalised arithmetic and adding transforms **CDS** p249
Radar target discrimination using a hybrid E-pulse fourth-order moments technique **RSN** p355
Robust monoparametric multiradar CFAR detection against non-Gaussian spiky clutter **RSN** p131
S-class of time-frequency distributions **VIS** p57
Signal detection over Rayleigh-fading channels with non-Gaussian noise **COM** p381
Simulation studies of moving-target detection: a new approach with Wigner-Ville distribution **RSN** p259
Simultaneous signals in IFM receivers **RSN** p181
Space-time adaptive processing for airborne radar with various array orientations **RSN** p330
Stability of multichannel sound control systems **VIS** p1
Statistical analysis of the eigenvector projection method for adaptive spatial filtering of interference **RSN** p57
Sub-optimum coherent radar detection in a mixture of K-distributed and Gaussian clutter **RSN** p39
Systolic arrays for the discrete Hilbert transform **CDS** p259
Threshold decision technique for direct sequence code synchronisation in a fading mobile channel **COM** p155
Two subspace-based methods for frequency estimation of sinusoidal signals with random amplitude **RSN** p169
Updating the Jacobi SVD for nonstationary data **VIS** p108
User position estimation for search and rescue using satellite in LEO constellation **RSN** p22

SIMULATION, MODELLING AND IDENTIFICATION

Adaptive control scheme using real time tuning of the parameter estimator **CTA** p241
Aircraft vertical profile prediction based on surveillance data only **RSN** p301
Autotuning temperature control using identification by multifrequency binary sequences **CTA** p233
Bayesian approach to parameter estimation and interpolation of time-varying autoregressive processes using the Gibbs sampler **VIS** p249
Block algorithms for the parametric estimation of signals and systems **VIS** p257
Case study comparison of robust linear quadratic design and mixed-sensitivity H$_\infty$ control **CTA** p476
Consistent parameter estimation of systems disturbed by correlated noise **CTA** p40
Data fusion and artificial neural networks for biomass estimation **SMT** p69
Data visualisation and identification of anomalies in power system state estimation using artificial neural networks **GTD** p445
Design of robust observation schemes for uncertain large scale systems **CTA** p369
Designing stabilising controllers and observers for uncertain linear systems with time-varying delay **CTA** p331
Direction-of-arrival and frequency estimations for narrowband sources using two single rotation invariance algorithms with the marked subspace **RSN** p234
Estimation of autoregressive signals from noisy measurements **VIS** p39
Estimation of speed and armature temperature in a brushed DC drive using the extended Kalman filter **EPA** p13
Estimation of speed, stator temperature and rotor temperature in cage induction motor drive using the extended Kalman filter algorithm **EPA** p301
High-frequency switching-mode power amplifier for shaker armature excitation **EPA** p415
Identification of cubically nonlinear systems using undersampled data **VIS** p267
Identification of time-varying nonlinear systems using minimal radial basis function neural networks **CTA** p202
Illuminant-tilt estimation from images of isotropic texture **VIS** p213
Improving the accuracy of the rotor resistance estimate for vector-controlled induction machines **EPA** p285
Integrated approach to eigenstructure assignment by output feedback control **CTA** p435
IQML algorithm for multiple signal parameter estimation **RSN** p237
Lattice filters based on the delta operator **VIS** p125
Modelling of capacitance tomography sensors **SMT** p203
Multiple local Laguerre models for modelling nonlinear dynamic systems of the Wiener class **CTA** p375
New identification based weighted H$_\infty$ norm approximation scheme and its applications to controller reduction **CTA** p61
Nonlinear internal model control using local model networks **CTA** p505
Optimal observers for disturbance rejection in two-degree-of-freedom LQI servo systems **CTA** p575
Performance evaluation of an algorithm for multiple target angle tracking **RSN** p252
Real-time identification of missile aerodynamics using a linearised Kalman filter aided by an artificial neural network **CTA** p299
Realisation of two-degrees-of-freedom compensators **CTA** p589
Recursive identification of certain structured time-varying state-space models **CTA** p489
Reduced-order estimator for closed-loop online estimation of cross-directional parameters in a plastics extrusion process **CTA** p549
Reduced-order observer for large-scale systems **CTA** p189
Robust system identification from weighted impulse response data and worst-case error bounds **CTA** p67
Simple model of a transport/diffusion system **CTA** p459
Unified PID design method based on a maximum peak resonance specification **CTA** p566

SINGLE ANTENNAS

Accurate analysis and synthesis of annular ring microstrip antennas **MAP** p341
Analysis of an open-ended waveguide radiator with dielectric plug **MAP** p126
Axial ratio of a curl antenna **MAP** p488
Corrugated soft sector horn with different beam properties in the two principal planes **MAP** p13
Design of loop antennas and matching networks for low-noise RF receivers: analytic formula approach **MAP** p274
Determining the polarisation properties of an antenna using arbitrary and unknown field probes **MAP** p431
Dimension-descent technique for electromagnetic problems **MAP** p372
Dual-reflector system with a spherical main reflector and shaped subreflector for compact range **MAP** p97
Efficient moment method for analysing printed wire loop antennas **MAP** p364
Experimental and simulation studies of the coaxially fed U-slot rectangular patch antenna **MAP** p354
Experimental and theoretical study of groove guide horn antennas at W-band **MAP** p311
Experimental studies of circular patches with slots **MAP** p421
FD-TD design of short backfire antennas **MAP** p1
Generalised iterative method for solving 2D multiscattering problems using spectral techniques **MAP** p73
Integrated-circuit antenna for high-permittivity substrates **MAP** p47
Interpolation of reflector surfaces by pseudosplines **MAP** p42
Moment-method analysis of circularly symmetric reflectors using bandlimited basis functions **MAP** p179
Moment method analysis of printed single-arm wire spiral antennas using curved segments **MAP** p261
Mutual impedance of two probes located in two different waveguide regions separated by a homogeneous dielectric slab: fullwave analysis **MAP** p329
Polarisation-diversity phase-encoded patch-antenna transponder **MAP** p201
Rigorous analysis of three-dimensional beam transmission through a dielectric slab **MAP** p173
Simple design of dual-beam leaky-wave antennas in microstrips **MAP** p397
Theoretical and experimental study of a cavity-backed annular-slot antenna **MAP** p337
VLF wave generation using VLF heating: a pointer to a new technique for ELF wave production? **MAP** p153

SONAR

Array pattern synthesis and robust beamforming for a complex sonar system **RSN** p370
Interferometric synthetic aperture sonar for high resolution 3-D mapping of the seabed **RSN** p96
PC-based real-time active sonar simulator **RSN** p227
Simulation and analysis of synthetic sidescan sonar images **RSN** p219

SONICS AND ULTRASONICS

Automated parameter extraction for ultrasonic flaw analysis **SMT** p93
Extrinsic Fabry-Perot interferometer vibration and acoustic sensor systems for airport ground traffic monitoring **OPT** p134
Simulation and analysis of synthetic sidescan sonar images **RSN** p219
Stability of multichannel sound control systems **VIS** p1

SPEECH COMMUNICATION AND PROCESSING

3.3 V mixed-mode IC design using switched-current techniques for speech applications **CDS** p367
Adaptation of hidden Markov model for telephone speech recognition and speaker adaptation **VIS** p129
Low-delay subband CELP coding for wideband speech **VIS** p313
Multirate coding for mobile communications link adaptation **COM** p211
Subsyllable-based discriminative segmental Bayesian network for Mandarin speech keyword spotting **VIS** p65
Updating the Jacobi SVD for nonstationary data **VIS** p108

STABILITY

Adaptive performance/robust control design for discrete systems **CTA** p95
Case study comparison of robust linear quadratic design and mixed-sensitivity H$_\infty$ control **CTA** p476
Co-ordination of emergency secondary-voltage control and load shedding to prevent voltage instability **GTD** p293
Control-system synthesis for open-loop unstable process with time delay **CTA** p334
Damping of multimodal oscillations in power systems using variable structure control techniques **GTD** p323
Designing stabilising controllers and observers for uncertain linear systems with time-varying delay **CTA** p331
Discretisation of continuous-time control systems with guaranteed stability [comment with reply] **CTA** p277
Dynamic system for solving complex eigenvalue problems **CTA** p455
Evaluation of load shedding to prevent dynamic voltage instability based on extended fuzzy reasoning **GTD** p81
Fourier series neural network-based adaptive variable structure control for servo systems with friction **CTA** p559
Frequency domain design method for uncertain systems under some unknown-but-bounded disturbances **CTA** p225
Generalised predictive control (GPC): a powerful control tool in medicine **CTA** p8
H$_\infty$ control for a sensorless permanent-magnet synchronous drive **EPA** p173
H$_\infty$ robust control design for dynamic ship positioning **CTA** p110
High-frequency switching-mode power amplifier for shaker armature excitation **EPA** p415
Implementation of a self-tuning AVR **CTA** p32
Improved algorithm for multivariable stable generalised predictive control **CTA** p309
Improvement of network damping and transient stability by active and reactive power control **GTD** p125
Indices for selecting the best location of PSSs or FACTS-based stabilisers in multimachine power systems: a comparative study **GTD** p155
LQ control of sinusoidal current PWM rectifiers **EPA** p95
Micromachined optical tunable filter for long term stability gas sensors **OPT** p350
Newton's approach to gain-controlled robust pole placement **CTA** p439
Nonlinear autopilot control design for a 2-DOF helicopter model **CTA** p612
Nonlinear filters for linear signal models **CTA** p281
Nonlinear internal model control using local model networks **CTA** p505
Optimal quadratic guaranteed cost control of a class of uncertain time-delay systems **CTA** p183
Output feedback sliding mode design for linear uncertain systems **CTA** p209
Output feedback TCSC controllers to improve damping of meshed multi-machine power systems **GTD** p243
Real time stabilisation of a triple link inverted pendulum using single control input **CTA** p498
Robust control methodology applied to the design of a combined steering/stabiliser system for warships **CTA** p128
Robust control of interval plants: a time domain method **CTA** p347
Robust decentralised design for multiple FACTS damping controllers **GTD** p61
Robust model-following control for a robot manipulator **CTA** p53
Robust output tracking for MIMO nonlinear systems: an adaptive fuzzy systems approach **CTA** p537

Robust PM synchronous motor servo drive with variable-structure model-output-following control **EPA** p317
Robust pole assignment in uncertain systems **CTA** p217
Robust self-tuning rotated fuzzy basis function controller for robot arms **CTA** p293
Robust speed control of brushless DC motor using adaptive input-output linearisation technique **EPA** p469
Robust system identification from weighted impulse response data and worst-case error bounds **CTA** p67
Selection of installing locations and feedback signals of FACTS-based stabilisers in multimachine power systems by reduced-order modal analysis **GTD** p263
Simultaneous stabilisation of power systems using genetic algorithms **GTD** p39
Stability analysis of fuzzy multivariable systems: vector Lyapunov function approach **CTA** p403
Stability of multichannel sound control systems **VIS** p1
Stable receding horizon control based on recurrent networks **CTA** p249
Stator resistance voltage-drop compensation for open-loop AC drives **EPA** p21
Synchronisation problem of high performance reluctance motors **EPA** p456
Variable structure adaptive control of robot manipulators **CTA** p167

SWITCHGEAR

AC circuit breakers: pollution flashover performance of various types of interrupter head **GTD** p50
Probabilistic approach for fault-section estimation in power systems based on a refined genetic algorithm **GTD** p160
Reliability concept for electric fuses **SMT** p87
Role of cooling fins in circuit breakers **GTD** p57

SWITCHING SYSTEMS

Capacity bounding of coherence multiplexed local area networks due to interferometric noise **OPT** p69
Highly parallel optics in ATM switching networks **OPT** p53
Multicomponent time-division-multiplexed optical fibre laser Doppler anemometry **OPT** p168
Multilayer frequency-selective surfaces for millimetre and submillimetre wave applications **MAP** p415
Multiple output semiconductor ring lasers with high external quantum efficiency **OPT** p19
Novel double-ring optical-guided-wave Vernier resonator **OPT** p203
Performance of dynamic path optical networks **OPT** p235
Role model analysis of an asynchronous communication mechanism **CDT** p232

SWITCHING THEORY

Access flow control scheme for ATM networks using neural-network-based traffic prediction **COM** p295
Analysis of ATM cell loss for systems with on/off traffic sources **COM** p129
Asymptotic properties of queuing networks **CDT** p249
BER performance of multiwavelength optical cross-connected networks with deflection routing **COM** p114
Bounds on waiting time for multiplexing leaky bucket enforced sources in ATM networks **COM** p17
Capacity bounding of coherence multiplexed local area networks due to interferometric noise **OPT** p69
Coupled reservation protocols for hierarchical single-hop photonic networks **COM** p247
"Dead reckoning"–a primitive and efficient self-routing protocol for ultrafast mesh networks **COM** p135
Design and application of Parsim–a message-passing computer simulator **CDT** p7
Estimation-based call admission control with delay and loss guarantees in ATM networks **COM** p85
Explicit loss indication and accurate RTO estimation for TCP error recovery using satellite links **COM** p47
Hamiltonicity, vertex symmetry, and broadcasting of uni-directional hypercubes **CDT** p169
Loss periods in ATM output multiplexer **COM** p301
Low-decoding-complexity TDM coded modulation with unequal error protection **COM** p372
Modelling multimedia traffic over ATM using MMBP **COM** p307
Neural-network connection-admission control for ATM networks **COM** p93
New algorithms for asynchronous communication **CDT** p227
Novel architecture for ATM QoS management **COM** p412
Novel double-ring optical-guided-wave Vernier resonator **OPT** p203
Parallel logic simulation with assignable delays on a vector multiprocessor computer **CDS** p5
Performance analysis of delay-loss priority mechanism using Markov modulated arrival stream **COM** p311
Performance analysis of space-priority mechanisms in an input and output queueing ATM switch **COM** p229
Performance of dynamic path optical networks **OPT** p235
Role model analysis of an asynchronous communication mechanism **CDT** p232

SYNCHRONOUS MACHINES

Computer-optimised smooth-torque current waveforms for switched-reluctance motors **EPA** p310
Field evaluation for electromagnetic torque components **EPA** p85
H$_\infty$ control for a sensorless permanent-magnet synchronous drive **EPA** p173
Minimising rotor losses in high-speed high-power permanent magnet synchronous generators with rectifier load **EPA** p331
Performance characteristics of dual-winding reluctance generators **EPA** p461
Robust PM synchronous motor servo drive with variable-structure model-output-following control **EPA** p317
Sliding mode and fuzzy control of toggle mechanism using PM synchronous servomotor drive **CTA** p393
Synchronisation problem of high performance reluctance motors **EPA** p456

SYSTEMS THEORY

Binary encoded 2nd-differential spectrometry using UV-Vis spectral data and neural networks in the estimation of species type and concentration **SMT** p73
CMOS analogue neurone circuit with programmable activation functions utilising MOS transistors with optimised process/device parameters **CDS** p318
Data fusion and artificial neural networks for biomass estimation **SMT** p69
Effects of 'overmakes' on company performance **SMT** p57
Identification of time-varying nonlinear systems using minimal radial basis function neural networks **CTA** p202
Implementation of a self-tuning AVR **CTA** p32
Multiple local Laguerre models for modelling nonlinear dynamic systems of the Wiener class **CTA** p375
Nonlinear internal model control using local model networks **CTA** p505
Piecewise linear approximation applied to nonlinear function of a neural network **CDS** p313
Robust model-following control for a robot manipulator **CTA** p53

TELECOMMUNICATION

Access flow control scheme for ATM networks using neural-network-based traffic prediction **COM** p295
Adaptation of hidden Markov model for telephone speech recognition and speaker adaptation **VIS** p129
Adaptive location management scheme for global personal communications **COM** p54
Closed-loop motion compensation for video coding standards **VIS** p227
Enhanced interframe coding based on morphological segmentation **VIS** p220
Investigation of overload control algorithms for SCPs in the intelligent network **COM** p419
Low-delay subband CELP coding for wideband speech **VIS** p313
Modelling multimedia traffic over ATM using MMBP **COM** p307
Multirate coding for mobile communications link adaptation **COM** p211
Novel architecture for ATM QoS management **COM** p412
Security management architecture for access control to network resources **CDT** p362
Spreading code protocol enabling programmable complexity/performance for CDMA local wireless networks **COM** p395

TELEVISION

Low-decoding-complexity TDM coded modulation with unequal error protection **COM** p372

THIN FILM GROWTH

Channel waveguides formed by ion implantation of PECVD grown silica **OPT** p97
Development of micro-optrodes using sol-gel immobilisation **SMT** p241
Photolithographic method for producing metal-dissolved diffractive structures in As-S glasses **OPT** p426

TIME-VARYING SYSTEMS

Designing stabilising controllers and observers for uncertain linear systems with time-varying delay **CTA** p331
Identification of time-varying nonlinear systems using minimal radial basis function neural networks **CTA** p202
Recursive identification of certain structured time-varying state-space models **CTA** p489

TRANSFORMERS

Analysis of very fast transient overvoltage in transformer winding **GTD** p461
Assessment of active microwave inductors **CDS** p161
Circuit properties of coils **SMT** p234
Computational algorithms for linear variable differential transformers (LVDTs) **SMT** p189
Earthing effects of coated underground cables with metallic shields bonded to earth electrodes **GTD** p26
Eddy current losses and hot-spot evaluation in cover plates of power transformers **EPA** p435
Effect of initial conditions on chaotic ferroresonance in power transformers **GTD** p456
Evaluation of eddy losses due to high current leads in transformers **SMT** p34
Exact analysis of a multipulse shunt converter compensator or Statcon. I. Performance **GTD** p213
Fault diagnosis of power transformers: application of fuzzy set theory, expert systems and artificial neural networks **SMT** p39
Ferroresonance in electromagnetic voltage transformers: a study based on nonlinear dynamics **GTD** p383
IC compatible planar inductors on silicon **CDS** p29
Improved simulation of HVDC converter transformers in electromagnetic transient programs **GTD** p100
Novel 18-step diode rectifier circuit with nonisolated phase shifting transformers **EPA** p1
PWM-controlled series compensation with low harmonic distortion **GTD** p555
Time-domain modelling of power transformers using modal analysis **EPA** p77
Use of a saturating choke in the series capacitor compensation of distribution lines **GTD** p75

TRANSMISSION LINE THEORY

Accurate and efficient evaluation of Green's functions for multilayer normally biased ferrite structures **MAP** p403
Analysis of microstrip discontinuities by the method of integral equations for overlapping regions **MAP** p449
Calculation of phase and attenuation constants for waveguides loaded with lossy ferrite with longitudinal or transverse magnetisation **MAP** p111
Characteristics of tapered rib-waveguides for high power semiconductor optical sources **OPT** p8
Computationally efficient analysis of buried waveguides with applications to semiconductor lasers **OPT** p14
Concatenations of waveguide sections **MAP** p119
Cutoff frequencies of circular waveguide loaded with eccentric dielectric cylinder **MAP** p7
Efficient and accurate FDTD algorithm for the treatment of curved material boundaries **MAP** p382
Electromagnetic modelling and simulation of multiconductor interconnect networks with inhomogeneous cylindrical substrate **MAP** p347
Finite-difference time-domain analysis of inset dielectric guide and its application to waveguide transitions **MAP** p477
General edge element approach to lossy and dispersive structures in anisotropic media **MAP** p81

Generalised approach to modelling shielded printed-circuit transmission lines **MAP** p103
Hybrid wave propagation in generalised Goubau-type striplines **MAP** p167
Iterative solutions of MFIE for computing electromagnetic scattering of large open-ended cavities **MAP** p141
Microwave modelling of optical diffraction grating devices **OPT** p221
Mutual impedance of two probes located in two different waveguide regions separated by a homogeneous dielectric slab: fullwave analysis **MAP** p329
Nonperturbative calculation of bend loss for a pulse in a bent planar waveguide **OPT** p91
Novel double-ring optical-guided-wave Vernier resonator **OPT** p203
Reduced-power semiconductor all-optical switch design **OPT** p2
Reduction of coupling coefficients for distributed Bragg reflection in corrugated narrow-rib waveguides **OPT** p101
Rigorous analysis of three-dimensional beam transmission through a dielectric slab **MAP** p173
Semiconductor laser linewidth from the transmission-line laser model **OPT** p246
Simple and accurate dispersion expression for the effective dielectric constant of coplanar waveguides **MAP** p145
Simulation of Berenger's perfectly matched layer with a modified TLM node **MAP** p205
Surface plasmon effects and waveguide properties of quantum cascade lasers **OPT** p48
Weighted-index beam-propagation method for analysis of three-dimensional optical structures **OPT** p197
Wideband TM_{01}-mode travelling wave coupler **MAP** p315

WAVEGUIDE COMPONENTS

Alternating phase-fed waveguide slot arrays with a single-layer multiple-way power divider **MAP** p425
Analysis of microstrip discontinuities by the method of integral equations for overlapping regions **MAP** p449
Assessment of active microwave inductors **CDS** p161
Frequency response of N-port planar gyromagnetic circuits using the mutual energy-finite element method **MAP** p221
Multimode equivalent network representation for the Y-junction of rectangular waveguides **MAP** p161
Synthesis of reflection-mode prototype networks with dissipative circuit elements **MAP** p437
Theoretical study of microstrip disc-ferrite resonator with impedance boundary conditions **MAP** p297
Treatment of two-dimensional E-plane bandstop filters using the finite element method **MAP** p411
UHF couplers for gas-insulated substations: a calibration technique **SMT** p117
Wideband TM_{01}-mode travelling wave coupler **MAP** p315
Wraparound patch resonators on a composite ground plane **MAP** p301

WAVEGUIDES

Calculation of phase and attenuation constants for waveguides loaded with lossy ferrite with longitudinal or transverse magnetisation **MAP** p111
Concatenations of waveguide sections **MAP** p119
Cutoff frequencies of circular waveguide loaded with eccentric dielectric cylinder **MAP** p7
Efficient and accurate FDTD algorithm for the treatment of curved material boundaries **MAP** p382
Electromagnetic modelling and simulation of multiconductor interconnect networks with inhomogeneous cylindrical substrate **MAP** p347
Finite-difference time-domain analysis of inset dielectric guide and its application to waveguide transitions **MAP** p477
General edge element approach to lossy and dispersive structures in anisotropic media **MAP** p81
Generalised approach to modelling shielded printed-circuit transmission lines **MAP** p103
Hybrid wave propagation in generalised Goubau-type striplines **MAP** p167
Mutual impedance of two probes located in two different waveguide regions separated by a homogeneous dielectric slab: fullwave analysis **MAP** p329
Rigorous analysis of three-dimensional beam transmission through a dielectric slab **MAP** p173
Simple and accurate dispersion expression for the effective dielectric constant of coplanar waveguides **MAP** p145
